I have no respect for people who steal frequencies belonging to other
radio services and have the audacity to call it a "hobby".

I have no respect for weasels who encourage this "hobby" because it
helps their company sell more equipment.

I have no respect for people who run high power on 11 meters and cover
10 to 15 channels at a time. It's selfish and shows a lack of
consideration for other CB users.

I have no respect for people who create and sell equipment expressly for
purposes of running high poower on 11 meters.

And I choose to say this in a public forum called rec.radio.cb.

That my actions bear any relation to your "wanna-be-cop chasing 1 mph above the speed limit offenders" analogy - is extremely questionable.

I would just like to see the rest of 27 MHz opened up. 27.405 and up to
28.000. Lessen some of the crowding anyway.

Our Local Police station (near a State highway) has a donated (not sure by whom) CB in the console too and a decent antenna on the roof of the building.... although if you walk up and look closely (I have), It's RARELY on.... the dispatcher can't stand the constant inane chatter.

N8's parents must have just left him in his room as a child and not even made any effort to try to raise him. They would have been better off with a dog if this is the best they have to offer. But then even a dog deserves some love..... Goes to show you why people should have to pass a test before they can become parents! N8, I hope when you have kids to can do better than them...GOOD LUCK!

Why not? I will, when I get my license. And I will pass all of them
as well. No problem there - it is just a matter of getting around to
doing it.

In actuality, the tests are trivial. They do not test much of anything
beyond the ability to memorize.

There will be some new units in the country in a few weeks with a new power supply and amplifier setup, it should be a great improvement over the old ones. Maybe not such a warranty hassle. Don't we hope so, Bill?

The following quote was written matter-of-factly at the end of an article regarding stubs, in the August 1979 issue of CQ:

"That completes our conceptual view of stubs. We would stop here except we inadvertently used a term that opens up the other side of transmission line of study: "terminated." Terminated implies resistive loads and this is what we do with transmission lines . . . match loads. It would all be in vain if we went to a lot of work to get a non-reactive antenna when, in the process, the resistance of the antenna, line and transmitter were horribly mismatched. Remember this: If the load is not matched to the line, the length of line becomes critical because of standing waves, in which case incorrect transmission line length may affect power output. When the load is matched to the line, the length of line is not critical. This is one way to know something about s.w.r; add a section of line and, if the tuning and power out change, you have it . . . standing waves."

V.J. Luciani, K2VJ

It seems CLP has disappeared, and is unwilling to support his claims that coax length doesn't matter. Too bad, since he had just obtained a copy of my reference that he said I misquoted, and now we could have had a nice, meaningful chat. So I guess the discussion about coax length is now "terminated."

BTW, the article is very informative and easy to understand, even for CLP. Recommended reading for anyone interested in getting the most from their coax.

And 160 and 40 and 10. Got no problems with nostalgia trips and good (!) AM is an artform. No problem with AM per se in the proper context so long as no one thinks it is anyones answer to communication.

But you must admit that Ancient Mary in the hands of non-technical types is dangerous. Even under the best of circumstances it is hard to run a linear linearly without heating the shack to tropical levels and that means buckshot. When fiddlers install idiocies like swing kits trying to get 10 lbs of fertilizer into a 5 lb bag the results are devastating.

Starting with a much more receiver-dependent system, FM and to a lesser extent SSB, makes more sense for a non-technical service. Doesn't guarantee cleanliness, listen to some of the processed garbage on the ham bands. At least in general such things as ALC are in use so it becomes highly linear amplified garbage.

The length is critical to the tuning system unless one likes smoke and
arcing. Getting the line length right, however, does not make the
standing waves go away. As I recall, the discussion was about using coax
of the same characteristic impedance as a matching device. Simply not
possible.

No way for me to read the full article, but a couple questions arise:
- Tuning stub length I can see as affecting resultant SWR on a line.
Do you believe the author was referring to a single line w/o tuning
stub?

- Line length and insertion point does become critical when talking
series-section transformers. Length is also important for phasing
lines. Was the author discussing these aspects?

- If single-line length DOES affect SWR, is there a certain length that
will produce an infinite SWR to a resonant antenna?

Yes. The title of the article is "What's A Stub?", and is mostly a primer on theory about the subject. The final paragraph refers the reader to further literature on how to design stubs for impedance matching.

>- Line length and insertion point does become critical when talking
>series-section transformers. Length is also important for phasing
>lines. Was the author discussing these aspects?

See above.

>- If single-line length DOES affect SWR, is there a certain length that
>will produce an infinite SWR to a resonant antenna?

The author makes no mention of this because, as I said in the first post, the article is about stubs. Besides, I don't think he said that line length affects SWR, but rather said that if you have standing waves line length becomes critical. I agree, but I would rather correct the mismatch than be concerned with line length -- it's a better solution.

The discussion began by someone asking why 18 ft. of coax is
important. I don't know that anyone said that any specific line length
makes the standing waves disappear. Except for using coax for stubs,
or in parallel to make a section with a lower impedance, I never said
that it could. Some said that coax length doesn't matter at all, which
is wrong.

I ask you to read the paragraph I quoted for what it says, not for
what it doesn't.

I try not to come down hard on illegal radio operators, since I'd be hypocritical in doing so. I've have much fun over the years with CB and ham, and there have been times that a few rules were broken in the process. Experimenting with what I could make my station do, was half the fun. I've had radios with hundreds of channels, and yet probably only used a few of them, but the fun of making the mods was the modivation, and most likely is what pushed me into an electronics career path.

The problem today, is that it is becomming extreme. It's no longer the "techies" that experiment and push the limits. Anyone with a few $$$ can

pay someone else for the same stuff. Where 100 watts was considered "high power" in the 70's, it's now considered "a driver". Years ago, when we all had "our fun", we were careful to keep it low profile. We had code names for illegal channels, amplifier use was kept to situations where they were needed (such as a distant mobile, or coping with an interfering station. Today, people flaunt their "stuff" like a badge of honor, attracting the attention of anyone who can listen (including the FCC). You can't expect to be that high profile and not have to deal with the negative feedback from other users, and those of us, who are entrusted with enforcing the rules.

I'm almost certain that there are few people that can accurately claim that they break NO laws or rules. Most people tend to ignore small (to them) rules that seemingly impact no one (Such as speed limits). But when the frequency and severity of the laws being broken increase to more visible levels, it's time to sit back and re evaluate the situation, and ask whether or not this is good for society.

> tolerance, now I'll set the legal wheels in motion - and I don't let go.

You've experienced, first hand, the lack of consideration that people in general seem to project toward their neighbors, and other people in general. Years ago most people would never consider imposing on someone like that without asking first. Your situation is becoming more and more common. That's why I'm really not surprised at the actions of radio

operators (both on ham and CB), who take these "me first" attitudes off the street and onto the airwaves.

What's the answer? I don't know. Beligerently telling people that they're wrong only infuriates them. I'd rather approach the situation with a "do onto others as you would have them do onto you" attitude. If you don't mind having your conversations drowned out by illegally high power radio stations or don't mind that your home entertainment equipment may not always give you the proper sound and video, due to external interference, then I guess you can feel free to dish it out as well. Otherwise, remember that the door swings both ways.

Most of these new laws that allow local cops to police radio "crimes", were born from fed up neighbors, who are tired of dealing with interference. At some point, something will give.

And that is the key. They were donated in the late 70's when CB, and REACT in general, were still viable options. I'd be willing to bet that they rarely turn it on now, with all the noise and BS that is a staple of today's CB. At the very least they'd have to run the squelch pretty far up, and that will limit useful receive range.

Most REACT stations are shutting down now, for the simple reason that more people now have cell phones that can reach 911 directly, then have CB radios, that can hopefully get a call through to a REACT station.

I think what every one would like to know VooN8Wer, is why do you have such a hard on for illegal cb use and not something where an actual person is being hurt or in need or danger and where you can make a difference? Child abuse, homeless, poor, charities, etc. You have about as much chance making a difference here as you do becoming well liked and popular, not that I care how you may respond. Most disliked people rationalize it by, "I don't care who likes me"......wah!

You people get more and more delusional every day. This one
is so good I have to comment on it.
1. My ISP is Epix. Always has been and will be till they start
giving the employee discount where I work next month or so.
2. I have NEVER posted as anyone other than myself. That would be
left to others (you know who you are).
3. I never said I would conspire with an AOL tech to do anything.
I merely suggested that if a certain individual kept aggrevating me
and many others here, that I had the connections to find out who he
really was. This has already been accomplished, and will be provided
on a need to know basis. He took it upon himself to come up with the
theory I was "conspiring" with an AOL tech.
4. You can do whatever you want and post whatever you want
because I get a hoot out of it. It makes for really good entertainment
on a bad day. But....get your facts straight before you start bragging
because that does bother me.
5. True and factual.....yea right. You're a legend in your own mind.
The only thing true and factual is that I cancelled much spew and
spam (in accordance with usnet rules) until it just bacame to much
of a bother since a few went completely off the deep end. I did
make a call or two though and now someone else of unquestionable
authority is dealing with it.
6. Seek mental help.....you need it.

Sparky,
And as your post infers, if the antenna/feedline is matched,
the length of the feedline is not important. Which ~was~ the
'point' of the thread. In that case, 18 feet has no particular
meaning.
'Doc

Source record: 69223

>QUOTE From: w5lz@oio.net :"Polehead,
It's too bad that you don't live in the real world. Most of the changes you want implimented are illegal..."
??? MOST?? re-read my post. MOST of the changes I mention are perfectly legal. Adding ctcss as a feature to a ham rig already being sold by HRO & AES, asking Uniden to be more original in their designs, Asking a 10M rig maker to fix a faulty step rate function, Asking Cobra to produce additional FCC Approved CB & ham sets.....How is ANY of this "ILLEGAL"??? As far as the mere 2 times I mentioned the way radios "mod", Most or All ham/CB gear "mods", & I merely pointed out how 2 particular models are "harder & more complex" than others, making them more like other FCC approved radios would also not be illegal, & is a small portion of the whole post anyway.....
THE ORIGINAL POST:
..."Hey radio makers......Listen up!

It seems that some idiot over where they make the radios has to brufk up at the last stages of design......examples:

The Magnum 257, 357, Titan, Prostar base & similar mobiles - Man, these radios could have given the 2950 a run for the money....All the features of a 2950 & the size of a PC-122...Yet you need to do "keystroke mods" every single time you turn on the radio to get the freqs...AND the 1kz step Doesn't roll over to the next 10 digit, at 27.409, the next click Forward brings you BACK to 27.400! What grasswipe engineer thought up this move??

The new RCI-2950DX - They added 12 meters & improved the board, & yet still omitted ctcss tone encode to enable REAL use of 10M repeaters with their shift function...Who was asleep at the wheel during this re-design??

UNIDEN CB RADIOS - All uniden has done in the past decade to their CB's is look at what Cobra is doing cosmetically & copy them...They made the Grant into the Grant XL, only difference, The faceplate was changed to look just like a Cobra 148! The new Grant LT, only difference, The faceplate & mic jack was changed/moved & extra "DSC" knob added to front to be more like a Cobra 148NWSTracker!...ditto with PC 76/78, 66/68.....shame on Uniden for not having more originality to back up their fine radios....What Corporate Duck brain thought up these "me too" moves??

GALAXY 959/TEXAS RANGER CB - These may be the finest "approved" CB sets out there, they tune up to "export" power, but why not use a chip that would easily give standard banks of channels?? Cheap midland, Maxon & other "approved" CB's have them, yet with these rigs you end up with a 148 style "switch/chart" mod, or need to hunt down a drifty "viagra" add on board.....Wake up people!!

COBRA - Why did they abandon all base stations?? When are they going
to give us a more compact SSB set, a good looking base, or a COBRA 10M or 2M
rig.....????

> Sparky, FLRC

You did indeed attribute false claims to a reference where they
could not be found. Why can't you tell us the page number and
paragraph number where your claim appear? Answer: because you
lied. You provide false information with a reference. I found
your reference; I called your bluff. And you have been exposed
as a liar.

Enough background information; now, to the current quote.

You are using this quote out of context. You have taken an
excerpt from a ham radio article which uses stub lines to

match impedances.

First of all, stub lines are virtually never used in a CB radio installation. And I question their value for any installation including ham radio. Sure, they can be used to transform impedances but so can an antenna tuner which is infinitely more usable in that it can be tuned and retuned for any frequency. So why bother farting around with coax stubs? This is another ham radio curiosity which has no place in a CB radio newsgroup.

Secondly, note that the author says "the resistance of the antenna, line and transmitter were horribly mismatched." Virtually every CB radio has a 50 ohm transmitter and a 50 ohm transmission line. They are matched. The only item left to match is the antenna. Since you pulled this article out of a ham radio article, it discusses conditions where the radio output impedance can be adjusted by tuning the output network. This is a non-scenario for CBs.

The article is referring to a situation where the radio output network and/or coax stubs are being tuned to provide a conjugate match. In this scenario (a non-CB radio scenario), the transmission line input impedance MUST be maintained or the conjugate match is lost. Changing the coax length does not change the SWR but it does change the transmission line input impedance. In this scenario, where this impedance is critical, the line length is critical.

Now, consider a true-to-life CB radio scenario. The transmitter has a 50 ohm output impedance and the transmission line has a characteristic impedance of 50 ohms. Even with a mismatched antenna, the length of the coax has no effect on the percentage of power transferred to the antenna (except for minor attenuation losses).

This has a Totally new designed board. Surface Mount design. Like that of the
New 2950DX series.

> Some say they drift on SSB, is that true?

Sure, some, these still us a PLL system, and a Variactor diode controlled by a
Pot on a Resistor.
Temp will effect this design.

> What are the controls on the inside to adjust the echo?

The Echo Board itself has two small adjustable pots under the metal case. Why
they didn't leave holes through the case for adjustment I'll never know.

> Any 1st hand knowledge would be a great help!

It's a nice radio, sounds solid on AM and SSB is better than some not as good as
others.

For official gain comparisons, it is supposed to be compared to a half-wave dipole, whis is all a 1/4W whip is (your vehicle body makes up the other half of the dipole). By that standard, the 102" whip is 100% effective, or efficient, or whatever you want to call it. By the same token, I have yet to find another mobile antenna that will radiate as well, no matter what outrageous claims are made on the package (like the 16db gain 4ft mag-mount I saw in a shop one day). So much has to do with the physical length and seperation of the endpoints of the antenna, that I doubt you're going to get anything bigger on a vehicle unless you resort to co-phasing (I mean actually paying attention to the details and measurements, not just bolting on a set of double-truckers) horizontally-seperated antennas.

Yes.

Say - is your power still on up there in NorCal? It was only fair that NorCal suffers first, because SDG&E customers have already been paying higher prices, and blew the whistle first. SCE come second. PG&E and Sacramento, and the generally more liberal north(who would more likely oppose building new plants for environmental reasons) are more to blame for the problem.

I've heard that SCE customers(that is all the SoCal customers outside the city of Los Angeles and County of San Diego) will be next to suffer - probably today.

SDG&E customers should be the last to suffer.

I have a Texas Ranger radio now and I am very happy with it. If I were to buy a new CB today the 966 would be high on my list of choices. Another good radio in that price range is the Uniden Grant.

My Opinion YMMV

Peace, Nick

I was just told that yes, it has the same board as the 88, so it is
essentially the same radio. That makes is a pretty good deal for the
money.

With lower
> quality standards and parts, or refurbished boards as the roomer goes.

Also was told by Copper that this is not true and is is manufactured new by
Ranger. So I stand corrected. It was a roomer that I had heard from
another dealer that according to Copper is incorrect. Thought I'd set the
record strait.

I am looking for some comparisons on "Shootout"-Type, center-loaded, open-coil Antennas. Using a 1/4 wave whip, (102" Stainless steel, with the 6" pot-belly spring--- To make it a full 9' , or 108") for the comparison Antenna....

Mainly I would like to see the Antennas compared in 3 Areas: Transmit, Recieve, and Channel Bandwidth.....
I have done a couple, but I want to see how accurate mine are.....

Just to know once and for all, who makes the BEST antenna...
Maniac.

Hustler makes a good mag mount for tweenty bucks and can handle
a two pill just fine. Had this antenna on the wifes wagon for a
year,she totaled it sunday,so I took the antenna off no scratches or
rust .Ibeleave it is called the hustler 27 but dont hold me to it the
mag and the load are not very big but the antenna surprized me and
my cb freinds on how well it performed.One last thing when I was a
teenager I did not want to drill a hole in the car so I used a mag
mount noticed it had plastic on the mag so took it off,wrong thing to
do leave the plastic there it scrathed plus rusted and put several
rings in the paint.Hope this helps.

I wouldn't trust ANYTHING Copper Electronics says or does. They are cut throats that try to put up a smokescreen with their prices, then hide behind their OUTRAGEOUS shipping costs, to make their money. I can't tell you how many times I have heard, " I can get that cheaper from Copper!".. I tell them to go right ahead. I stand behind the equipment I sell. Try sending a radio back to Copper. They tell you, the radios have a FACTORY warranty only, that "Copper" will not honor.

I guess you will have to learn like everyone else..... Just my $.02
Maniac.

The subject of the flamewar in this newsgroup came up in the cafeteria at work today, along with the cb handle of a former associate of mine who calls himself "the phoneman". I am sitting in at a guys desk reading through the group and I see he is pissing at a couple of hams posting to the group. I also see some curiousity about who he REALLY is and why he has such a dislike for amateurs.
I am a former employee of his (fired me in one of his temper tantrums) and I have NO respect for him anymore, so I thought I'd give you some ammunition.
The reason he hates ham operators is that when he worked for Motorola, he designed some equipment and when he tried to get a patent on it, he found out that one of the other engineers (who was a ham) stole his design and had it patented himself, while "the phoneman" tried to decide whether to patent it or not. As a side note, and you'll love this one,he and two other engineers at Motorola got canned for designing linear amps for persons I won't name (They are still friends). Voilation of company policy it seems.
Last time I knew (15 years or so ago), he was an enginner with Sprint doing something with networking. I hear he still employed there but not sure of his capacity now.
Last but not least, he is in here messing with you just for sport, and could care less about CB or Amateur radio. Keep on him, he needs it.
And don't underestimate the sneeky rat-bastard. Sad part is, he could be a great asset to this and the amateur group if he would participate, but I doubt thats going to happen.
Yours truly,
Dave

You are correct Jay, There is no national voice for CB mostly because meaningful improvements are outside of current regulations and no one with the clout to take the initiative. Unless Cobra, Uniden or some other interested (money to gain) entity steps up to make change we will have to accept the status quo. Shade tree radio and amps will continue until some other form of communication like a public Nextel channel takes over.

So true. And I wonder if real-world trends are reflected in this
newsgroup. Normally (aside from this discussion) this forum is DOMINATED
by threads dealing with "power" and "extra channels". One might
conclude that the hobby has degenerated into a series of pointless
matches between "RF-gladiators". One could also conclude that the
majority of CB'ers are simply not interested in operating considerately.
I hope this is not the case.

Who cares what they cost up front, they are free after the rebate! I
ordered one last year and I was amazed when I received the rebate check
for the entire amount (less shipping).

he was all wrapped up in the belief that impedance applied only to the resistive component.

I tried to explain some basics to him to get to that point, but he refused to acknowledge that impedance had a reactive component if present. Further he refused to believe a shorted 1/4 wave stub had an infinite impedance.

After a few frustrating posts, I gave up and decided it would be more productive pulling the wings off of flies.

Answer: I did provide the page number where the information I posted
began. I was summarizing information found in several chapters, and I
was posting it to a NG. I wasn't writing a thesis. If you want page
numbers for each word, try the index.

> You provide false information with a reference. I found
>your reference; I called your bluff. And you have been exposed
>as a liar.

You did nothing of the sort because there was no bluff. You also said
you would post pages, and I suggested that you post any part which
contradicts what I said. You didn't. In fact, you quit posting
altogether. So go ahead and post any part of the book that contradicts
what I said.

>Enough background information; now, to the current quote.
>
>You are using this quote out of context. You have taken an
>excerpt from a ham radio article which uses stub lines to
>match impedances.

You didn't read the article, so don't tell me what is 'in' or 'out' of
context when you don't know. It is an article describing stubs, what
they are and how they work, not about their applications. And the
paragraph was written out of context by the author, not me.

>First of all, stub lines are virtually never used in a CB radio
>installation. And I question their value for any installation
>including ham radio. Sure, they can be used to transform impedances
>but so can an antenna tuner which is infinitely more usable in
>that it can be tuned and retuned for any frequency. So why bother
>farting around with coax stubs? This is another ham radio

>curiosity which has no place in a CB radio newsgroup.

You are the one that is out of context now. I didn't post the paragraph to talk about stubs. Didn't you even read the first line? "That completes our conceptual view of stubs." The word 'stub' isn't used anywhere else in the quote. The paragraph is a seperate concept and stands alone, as it was intended by it's author.

But if you _want_ to talk about stubs, I'm sure there are countless hams that would disagree with you. Matter of fact, even a few CBers. Since stubs are frequency dependant, and CB covers only one band (at least it's supposed to), then a stub can be a very useful item. Much cheaper than any antenna tuner. They can also be used as filters and traps to clean up dirty amps. Maybe stubs _should_ be a topic for CB radio discussion.

>Secondly, note that the author says "the resistance of the
>antenna, line and transmitter were horribly mismatched."
>Virtually every CB radio has a 50 ohm transmitter and a 50 ohm
>transmission line. They are matched. The only item left to
>match is the antenna.

You suspiciously left out the "non-reactive antenna" part. And note that the next sentence begins, "If the load is not matched to the line, . . ."

> Since you pulled this article out of
>a ham radio article, it discusses conditions where the radio
>output impedance can be adjusted by tuning the output network.
>This is a non-scenario for CBs.

A great many ham radios use 50 ohm transmitters with 50 ohm transmission line, so when you say that "this is a non-scenario for CBs" you might as well add that it is a non-scenario for ham radios as well. But you would still be wrong because many CBs transceivers can be tuned for a different impedance. I have tuned several to use RG-11.

>The article is referring to a situation where the radio output
>network and/or coax stubs are being tuned to provide a conjugate
>match. In this scenario (a non-CB radio scenario), the transmission
>line input impedance MUST be maintained or the conjugate match is
>lost. Changing the coax length does not change the SWR but it
>does change the transmission line input impedance. In this
>scenario, where this impedance is critical, the line length is
>critical.

Agreed to a point. In a mismatch situation the transmitter can be tuned to match the line's input impedance OR the length of the transmission line can be changed to bring the line's input impedance closer to that of the transmitter.

>Now, consider a true-to-life CB radio scenario. The transmitter
>has a 50 ohm output impedance and the transmission line has a

>characteristic impedance of 50 ohms. Even with a mismatched
>antenna, the length of the coax has no effect on the percentage
>of power transferred to the antenna (except for minor attenuation
>losses).

If the transmitter is 50 ohms and the line input impedance is not, there is a mismatch. The transmitter is the source and the line input is the effective load. The greater the mismatch, the less power delivered to the load. If the length of the line can be changed to minimize that mismatch, then yes, the length of the line has an effect on the power transmitted to the antenna. The length of transmission line needed to minimize any mismatch is frequency dependant, and turns out to be any odd multiple of a quarter-wave. For V=0.66, those lengths are 6,18, 30, 42, . . . feet.

Do you have a FSM and a 3-foot section of coax? If so, test it for yourself.

If you use less than 18ft. of coax you you may end up with a high SWR due to RF feedback, it is only recommended as a minimum length to use because anything less than 18ft. on the 11meter CB band is shorter than a 1/2 wavelength . The STUB they are referring to is a 1/4 wave transmission line transformer which is used to match the impedance of the load to the impedance of the source , this is important if you have a impedance mismatch because the source will not deliver maximum power to the load unless the impedances match [let me know if i am going too fast] .A STUB is created by using this formula: 246 x Velocity Factor / Frequency. Anyway that is what why we Hams use STUBS. Changing the length of the coax will not change the SWR , however it will change the way your SWR meter reads the SWR of your load or antenna. One way to read the true SWR of your Antenna is by using Odd Multiples of a Electrical 1/2 wavelength . This is the formula for finding the 1/2wave Electrical length of your coax : 492 x Velocity Factor / Frequency . This is not a broad-banded formula and only works on the frequency that you used in the equation . Example: 492 x .78 / 27.185 = 14.1 , this is the 1/2 wave Electrical length of a feed-line with a Velocity Factor of .78 that is used primarily on 27.185Mhz . Always use Odd multiples of this length , Example 14.1 x 3, 14.1 x 5 etc.etc. until you have enough to reach the antenna. Good-luck and Take Care, 714Sandpile waving Goodbye.....

I have noticed that many hams disregard the reactive component simply
because it is usually not very significant. For most ham applications,
that's perfectly fine.

> Further
>he refused to believe a shorted 1/4 wave stub had an infinite impedance.

Now that's not fine. It should be obvious, even to the most casual
observer, that a shorted 1/4 wave stub is equivalent to a parallel LC
tank and an open 1/4 wave stub is the same as a series LC network.

>it has been hams and GMRS repeater users(not GMRS interstitial users).

A whole body of messages is being exchanged on this subject. Perhaps you do not subscribe to some of the forums. Here's a sample from a REACT representative:

I have to agree with Dave.

For those unfamiliar with MURS, It is going to be set up as sort of an "FM CB". You are not going to need a license to use the service. You will be able to use a repeater and such, but there is a power limit on the service (not that that has stopped the current CBer's). They are taking some ofthe business band frequecies and a couple of other frequencies and creating this band.

A good example of unlicensed users useing licensed frequncies is the CBer's that push their CB's out of 11 meters to the 10 meter band. The 10 meter is part of the amateur band and the Licensed amatuers that use the 10 meter band are complaing about it. If it is let that the MURS Users crossband to GMRS without a license, you lose the GMRS service.

You also can;t crossband from GMRS 460 to the amatuer 440 event ough they are so close. Same problem. Licensing.

FCC has even said before that they don;t want another hobby band. There is the Amatuer bands. If they let MURS cross without a license.....GMRS just became a hobby band and we lose it. GMRS is great for personal use.

Just my 2 cents ;)

you definitely get your money back... I ordered one around the same time jerry ordered one. I had to wait about 4 months though to get my check. It does come, but it takes a while. they use your money to make money... that's why they hold it

At last check the last cb they had was over $200US (the one I got was like $80US IIRC) because I'm in canada it would cost me approx $400 to get this free cb. I can handle being without $80US for a few months, but $400 is a little steep.

Anyway, I'd check out e-bay, or your local buy/sell papers, or flea market.

Makes no difference. Amateur gear is not type-accepted. So long as he stays above 28 and takes responsibility for it, he is as legal as ice cream.

hmmm, what are the odds in vegas on that refund being handed out???
however these silly titles are a bit much for a cb radio dealer. trying
to appear legit. what is that all about? they must think we all fell
off of the turnip truck last night,.....cd is out.....

I can see where this gentleman is coming from, but I don't have any intention of "crossing" to GMRS non-interstitial. I, and I would assume most other "family-types", are only interested in crossing from MURS to FRS/GMRS-interstitial.

I will admit that(once my communicator license proposal fell on deaf ham ears) I've been trying to farm the FRS(and now MURS) users, and convert these young users to be hams, as the average age of hams is way too high, and the USA is losing the ability to teach the younger generation the radio art. No offense to GMRS non-interstitial users, but I want these users to eventually BE hobbyists and move into Amateur Radio. If GMRS-interstitial is the bridge to the Amateur Service, I don't see why GMRS-non-interstitial users should become alarmed - these folks will just be "using the neighbor's vacant lot" with some of them "passing thru the side gate" on the way to becoming hams.

However, this is a good point, and I will clear this up(and my ultimate intentions) on my Crossband Repeater web site.

On the contrary Aaron, you would be wise to take the above advise and do something useful with your life instead of spending so much time on your CB fixation. Your time spent here accomplishes nothing and if you think differently, you are deluding yourself. This is good information I am giving you. However based on your history here I doubt you are capable of rational self examination on this matter, but at least I gave it shot.

Attorney: So, Scottiekins, you and a group of people who are involved in a conspiracy to violate federal law are suing a legal ham operator for complaining about your conduct, is that correect?

Scottiekins: Yes sir, we can't take it anymore. It is NO FAIR when someone says anything about what we do, and we are too sissy to take it.

Attorney: No Fair, huh...hmmmmm...

Scottiekins: YEAH NO FAIR, THEM MEAN OLE HAMMIES!!! Only WE can call people child molesters and sodomizers of animals. NO FAIR...WAHHHHH WAHHHHH WAHHHHHH WAHHHHHH!!!!!

Attorney: Offers Scottiekins a hankie...

Scottiekins:<blubbering and snot running down his face> THEM MEAN OLE HAMMIES DO TO ME WHAT I DO TO THEM!!!!!! WAHHHHHHHH WAHHHHHHHH WAAAAAAAHH!!!!!!!

Judge: Scottiekins, order please!

Attorney: And you say that it isn't fair for the "mean 'ole hammies" to say anything back, that they should just take it if you post disgusting things and call them anything you want?

Scottiekins:<more subdued now, but still whimpering> That's right, NO FAIR!!

Attorney: And you admit that you posted about your illegal operations, in e-groups and on Deja? That you bragged about it?

Scottiekins:<openly bawling now, realizing his defeat> YEAH BUT THE LAW IS WRONG!! WAHHHHHH WAHHHHHH WAHHHHHH WAHHHHHHH!!! And besides, other people do it...and besides...I WANT TO!!!! WAHHHH WAHHHHH WAHHHHH!!!

Judge: Case dismissed

POST VERDICT INTERVIEW WITH CNN:
Reporter: Mean Hammies, are you happy with the verdict?

Hammies: We already knew what was gonna happen. The delusional dorks are the ones who wondered.

Reporter: Keyclowns, how do you feel about the verdict?

Keyclowns: Well, we are gonna go get a buncha hamsters, furnace tape 'em so they wont come apart, and have a big party together to celebrate our defeat at the hands of the mean 'ole hammies. Afterward, we will go turn in our sparkomatics and our 1 pills to Riley.

Hammies: Just to show there are no hard feelings, keyclowns, look what we brought you!

All Keyclowns at once: OOHHHHH HAMSTERS AND FURNACE TAPE!!!! THANK YOU HAMMIES!!!<Keyclowns rush toward hammies to kiss and fondle them>

Hammies: Keyclowns, chill out, we are heterosexal!

Reporter: This is Riley Hollingsworth, CNN News, Keyclown Land, USA.

Well.....it looks like 'ol robot Dave and the the people who pull his strings had a little too much time on their hands today. Hi Dave. You've stooped to a new low. Congatulations.

Snip>
I am a former employee of his (fired me in one of his temper tantrums) and I have NO respect for him anymore, so I thought I'd give you some ammunition.

True. He gave a competitor a copy of one of my schematics I didn't want them to have.

The reason he hates ham operators is that when he worked for Motorola, he designed some equipment and when he tried to get a patent on it, he found out that one of the other engineers (who was a ham) stole his design and had it patented himself, while "the phoneman" tried to decide whether to patent it or not.

False. Has nothing to do with that incident whatsoever.

As a side note, and you'll love this one,he and two other engineers at Motorola got canned for
designing linear amps for persons I won't name (They are still friends). Voilation of company policy it seems.

True. Signed a paper when I went to work there stating anything I designed while under their employ was considered to be their property if I did it on their time or not, and could not be sold. Total Bullshit.

Last time I knew (15 years or so ago), he was an enginner with Sprint doing something with networking. I hear he still employed there but not sure of his capacity now.

True. Still there and none of your business what I do.

Last but not least, he is in here messing with you just for sport, and could care less about CB or Amateur radio. Keep on him, he needs it. And don't underestimate the sneeky rat-bastard. Sad part is, he could be a great asset to this and the amateur group if he would participate, but I doubt thats going to happen.

Somewhat True. I no longer profit from either hobby and I do get a kick out of all the feuding, and self righteous postings of a few. I rarely participate for the same reasons others who used to don't.

Snip>
PS>Ask him why he's not a ham anymore!

I was young once too. Cooked a few too many garage door openers one night with one of my RF producing gadgets. That was the punishment. BFD.

The Phoneman

Doc, I am also tired of this thread showing up again. If you really want a low SWR at the rig, use even (or odd) multiples of 1000 wavelenghts of coax. You will have a 1:1 SWR at the rig, even if you leave the antenna disconnected!

Cheers from Rochester, NY

Close your eyes.....And go back....
Before the Internet or the MAC, Before semi
automatics and crack
Before SEGA or Super Nintendo...

Way back........

I'm talking' bout hide and go seek at dusk.
Sitting' on the porch, Hot bread and butter.
The Good Humor man, Red light, Green light.
Chocolate milk, Lunch tickets, Penny candy in a brown
paper bag.

Playing' Pinball in the corner store.
Hopscotch, butterscotch, double Dutch Jacks, kick ball,
dodge ball.
Mother May I?

Red Rover and Roly Poly Hula Hoops and Sunflower Seeds, Jolly Ranchers,
Banana Splits, Wax Lips and Mustaches Running through the sprinkler

The smell of the sun and lickin' salty lips....

Wait......

Watching' Saturday Morning cartoons, Fat Albert, Road Runner, He-Man, The
Three Stooges, and Bugs Or back further, listening to Superman on the
radio
Catching' lightening bugs in a jar, Playing sling shot. When around the
corner seemed far away, And going downtown seemed like going somewhere.

Bedtime, Climbing trees, An ice cream cone on a warm summer night
Chocolate or vanilla or strawberry or maybe butter pecan. A lemon coke
from
the fountain at the corner drug store. A million mosquito bites and
sticky
fingers,
Cops and Robbers, Cowboys and Indians, Sitting on the curb, Jumping down
the
steps, Jumping on the bed. Pillow fights.

Running till you were out of breath Laughing so hard that your stomach
hurt
Being tired from playing'.... Remember that? Eating Kool-aid powder with

sugar
Remember when. There were two types of sneakers for girls and boys (Keds

&
PF Flyers) and the only time you wore them at school, was for "gym."
When it took five minutes for the TV to warm up, if you even had one.
When nearly everyone's mom was at home when the kids got there.
When nobody owned a purebred dog. When a quarter was a decent allowance,
and
another quarter a miracle.

When milk went up one cent and everyone talked about it for weeks?
When you'd reach into a muddy gutter for a penny. When girls neither
dated nor kissed until late high school, if then. When your Mom wore
nylons that came in two pieces. When all of your male teachers wore
neckties and female teachers had their hair done, everyday. When you
got your windshield cleaned, oil checked, and gas pumped, without
asking, for free, every time. And, you didn't pay for air. And, you got
trading stamps to boot! When laundry detergent had free glasses,
dishes or towels hidden inside the box. When any parent could discipline

any kid, or feed him or use him to help carry groceries.
When it was considered a great privilege to be taken out to dinner at a
real restaurant with your parents. When they threatened to keep kids
back
a grade if they failed ..and = did! When being sent to the principal's
office
was nothing compared to the fate that awaited a misbehaving student at
home.

Basically, we were in fear for our lives but it wasn't because of drive
by
shootings, drugs, gangs, etc. Our parents and grandparents were a much
bigger threat! and some of us are still afraid of em!!! Didn't that
feel
good..
just to go back and say, Yeah, I remember that! There's nothing like the

good old days! They were good then, and = They're good now when we think
about them. Share some of these thoughts with a friend who can relate,
then
share =
it with someone that missed out on them. I want to go back to the time
when.....Decisions were made by going "eeny-meeny-miney-mo."

Mistakes were corrected by simply exclaiming, "do over!"
Money issues were handled by whoever was the banker in "Monopoly."
Catching the fireflies could happily occupy an entire evening. It wasn't

to have two or three "best" friends. Being old, referred to anyone over
20.
The net on a tennis court was the perfect height to play volleyball and
rules didn't matter. The worst thing you could catch from the opposite
sex
was cooties. It was magic when dad would "remove" his thumb.

It was unbelievable that dodge ball wasn't an Olympic event.
Having a weapon in school, meant being caught with a slingshot.

Nobody was prettier than Mom.

Scrapes and bruises were kissed and made better. It was a big deal to finally be tall enough to ride the "big people" rides at the amusement park.
Getting a foot of snow was a dream come true. Abilities were discovered

because of a "double-dog-dare."
Saturday morning cartoons weren't 30-minute ads for action figures.

No shopping trip was complete, unless a new toy was brought home.
"Oly-oly-oxen-free" made perfect sense. Spinning around, getting dizzy and
falling down was cause for giggles. The worst embarrassment was being picked
last for a team. War was a card game. Water balloons were the ultimate weapon.
Baseball cards in the spokes transformed any bike into a motorcycle.

Taking drugs meant orange-flavored chewable aspirin. Ice cream was considered a basic food group. Older siblings were the worst tormentors, but
also the fiercest
protectors. If you can remember most or all of these, then you have LIVED!!!!
Pass this on to anyone who may need a break from their "grown up" life.

I DOUBLE DOG DARE YA!!!!!!!!!!!!

COLD as ICE and TWICE as NICE.. Mr. ICECOLD BIG APPLE TREES says.. It don't mean a THING if you ain't got that SWING!!!!!!!

Aaron, I will thank you (and I mean that, sincerely) for not throwing the name calling at me (although that wanna-be-cop I threw at you probably asked for it). I actually do understand your position. I guess my only problem was the manner in which you keep posting. Actually, it is the N8 character who is dropping to the worst name-calling. My feeling is that most of the folks in here are hobbiests - and a fairly small number engage in activities you object to. I visited the N8 (why can't I ever remember his call) website - and had to chuckle when he claimed 99.99% of the time when there is interference to one's TV or stereo, it will be an 'illegal CBer'. Anyone who has been involved in interference problems will tell you that it is usually (read 'almost always') the lack of radiated immunity in the receiving device causing the problem. Telephones, stereos, even computer speakers can pick up RF. If the problem is next door (at least here in the city), this can easily be caused by as little as 5 watts. I've seen a hundred watts cause a problem several hundred feet away. That particular problem was a guy who built a stereo from a kit (this was in the 60s), and to keep it cool, left the metal cover off, left the tube shields off, and, unfortunately, had about 1/4 wave of wire connecting his speakers (1/4 wave at 21 MHz) - broadside to the transmitting site! The real problem is the attitude that others may perceive - and that keeps them away from amateurs. Not all CBers nor amateurs are good, but the hams and CBers are not that much unalike

either. Both groups are hobbiests, and both groups have a
few 'problems' within their groups. I guess I would not be as unhappy
if you were to take it up with one or two particular individuals
bragging about their killowatt rigs, but then I would ask if this could
better be handled through e-mail, rather than on the newsgroup. That
said, I will again state that I appreciate your not giving me a 'slam'
(which I may have deserved - I guess I was just a bit miffed over some
of the same threads - such as that stupid 'how long the coax' question,
and, of course, your constant entry into threads) and getting some
folks upset. Look at it this way, in a few years the MUF will be going
down and the whole thing will become history. Meanwhile, all of us
(myself included) could be doing something more significant than
wasting a ton of server bandwidth. Please reconsider. Thanks.

73 from Rochester, NY
Jim

ps - you are welcome to disagree, as is your (and everyone's right).
If you disagree strongly, please e-mail me. I have no problem
discussing it (as you have done here without the name calling), but
feel it best done one-to-one and not on the newsgroup. e-mail me a
j.r.hampton@worldnet.att.net. Thanks!

I am looking for the "Control Box" for the M-119 "Scanner" antenna. Made by
Antenna Specialtists
Co.
The antenna is a 3 element phased vertical dipole for CB
The Control Box has a part number of 19C1120.

Should I end up having to build one, would
someone please tell me what the secondary
voltrage is on the transformer, and the values
for R1, C1 & R2?

Gene

Nice painting, Mr.Picasso ! :)
Those thoughts bring me to my favorite cornerstone of childhood... The Blizzard of '78 in Connecticut.
Tunneling through amazing depths of snow (3 to 15ft), at the ripe ol' age of 9 will remain my favorite memory. Days off from school with a whole neighborhood of kids was the best.
Thanks for the reprieve from the childsplay lately. Nice to know the sun can still burn through the fog of humanity.
See ya COLD... 747@27.345 CT

>

- Posting here implies that you own and operate a CB radio.
- Your specific post implies that you are suspicious of and have a distaste for people of other color than your own.
- Therefore your only friends are of the same color skin as yours.
- By definition you have no interest in talking to or making contact with others unless they are of the same skin color as you.
- Therefore you have no need to talk on your CB to anyone unless you personally know them, limiting your radius of operation to 15-20 miles or less.
- Having no knowledge of who's on the other end and having a distaste for anyone not of your skin color, no need to talk to anyone you don't know. You're stuck with conversations with your own race.
- Therefore you would have absolutely no interest in illegal amplifiers or transmitting over 15 miles, let alone the 150-mile or so maximum set by the FCC.
- Therefore you must be operating an FCC type-accepted radio with no additional peripheral equipment. Congratulations. At least you've done one thing right.

Regarding the web pages, for example the 3 above:

I cannot undo it, since I did not do it. I am sure with your talents you can play cyber defective, I mean detective and find out who did it. As far as posting the anti-n8 site goes...if person 1 posts it, gets slapped, and person 2 posts it...person 2 is just as guilty.

You are so lame...make some more legal threats or wish me to pop a vein again, willya? If I pop a vein it will be from laughing at pathetic wimps like you.

Take your redneck hypocritical sissified ass to the outhouse, and dont forget the mens underwear section of the Sears catalog, so ya can pound yer meat.

Bottom line: You can't do anything about it. Period, Keyclown, period.

I was owed a $320 refund payment by EEI, and I received the full payment on 1/17/2001. I am satisfied that this problem was an isolated instance, and therefore not indicative of EEI's normal SOP. This matter has been resolved, and is now over. Best of luck to everyone....now lets get back to radio!

The VR-9000 is an old RCI board, it's the same one as in the original Pluto. They are basically a Pluto with a ech. But, no mic gain, no rf gain, and no new power circuit improvements as the new Galaxy radios have. They area descent radio for the money, for the features they have, but this radio seems to have all the problems the Galaxy radios used to. Now Galaxy is very relaible, as is all RCI products, but the old ones...man, they kept CB Shops busy. So if your a technician, hey buy a VR-9000 and save some bucks, it's an economy unit if there ever was one. Stripped down to the bones. But, if you are looking for a reliable unit, a dependable unit, a zero maitenance package, The I would choose a more modern RCI package, like anything Ranger USA, or even the new Connex, or Galaxy.

3270. FCC proposal for new Amateur "Colt" License Class

Newsgroup: rec.radio.cb
Date: 2001-01-19 06:52:23 UTC
From: Stewart R Teaze <HORSESHOE7@prodigy.net>
Message-ID: <948o9h$4mg4$1@newssvr05-en0.news.prodigy.com>
Source record: 69323
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.antenna,alt.radio.family,rec.radio.cb,rec.radio.amateur.digital.misc

The rapidly-expanding Family Radio Service has exposed millions of young people to the world
of radio communications. But now, where is a young kid to go who has is interested in experimenting
with radios and get more range than the typical 1/2 mile of FRS? MURS might help a bit(if Motorola doesn't
get their way), but you know that a growing mind is eventually going to want more than just this. GMRS
doesn't have the resources, and is not a service that was created to foster experimentation. Like it or not,
the typical young person ends up cutting his radio experimention teeth in the Citizen's Band service, because
there isn't a reasonable entry-level ham license for kids(it is even worse now after restructuring, what with the
elimination of the Novice Class).

Everyday now the USA is falling further and further behind Europe and Japan in the wireless communications
race. As hams, it is time we make an effort to insure that our young people are provided with the proper
environment, incentives, and role models to properly learn radio communications techniques and etiquette.
It is time for hams to stop complaining, step up to the plate, and take an active role in seeing that our bright,
young technical minds are being taught properly.

As a result of this, I have reworked the Communicator entry-level license proposal I submitted to the FCC last year,
and I will now be proposing a new entry-level Amateur Radio class known as the "Colt" class. I submit a draft
of the proposal for your review below. Please keep in mind that the future of American involvement in wireless
communications development depends on us to properly encourage and teach tomorrow's experimenters, operators,
technicians, and engineers...

****
Proposal to FCC to institute an introductory-level "Colt" license class in the Amateur Radio Service - REV A

In the late 1980's and early 1990's when the current Amateur Radio Service Technician Class license was conceived and implemented, it was
an appropriate alternate introductory license class. However, due to the recent elimination of the Novice Class license, and as a result of improving

technology; the Technician Class license no longer serves well as the only introductory license, as it is doing poorly in drawing young members into the Service. As a result of license restructuring, it is now actually harder for young people to obtain an Amateur license than it was before restructuring.

In this critical era of global competition, especially in the wireless communications arena, it is essential that we provide a means for properly educating our young people in RF communications operation and theory.

Today, technologies like the Family Radio Service, high-speed telephone & cable modems, the Internet, and inexpensive cellular telephones, have overshadowed the privileges of the Amateur Radio Service, and made the requirements for young beginners to obtain a Technician Class license out of date. Additionally, the Technician Class license has now evolved into a beginning and ending point for most modern day Amateurs, who are mostly interested in VHF/UHF communications, rather than HF communications. Incentive licensing has virtually been eliminated.

The need for a Service dedicated to the goal of teaching young radio users proper radio operation techniques and etiquette can clearly be seen in the disarray present on the 11 meter Citizen's Band Service frequencies. The fact is, the Citizen's Band has become the defacto introductory service for young people just beginning to learn to experiment with radio; yet the Citizen's Band is a very poor environment for young people to be learning in.

Therefore, it is recommended that a new "Colt Class" license be added to the Amateur Radio Service expressly to encourage young individuals to enter the Amateur Radio Service to improve their understanding of RF communications theory, provide a healthy learning environment, and encourage radio experimentation.

On the 70cm UHF band, Colt licensees would be restricted to voice communications on 5 simplex-only 20khz-spaced channels on 446.00, 446.02, 446.04, 446.06, and 446.08 Mhz; and digital communications up to 19,200bps on 1 simplex-only 60khz bandwidth channel on 446.14Mhz.

On the 1.25m VHF band, Colt licensees would be restricted to voice communications on 5 simplex-only 20khz-spaced channels on 223.42, 223.44, 223.46, 223.48, and 223.50 Mhz; and digital communications up to 19,200bps on 1 simplex-only 60khz bandwidth channel on 223.56Mhz.

To encourage experimentation/understanding of antenna and VHF/UHF RF propagation theory, Colt licensees would also be allowed to setup and/or operate through a VHF/UHF crossband, simplex user input/output, repeater station on two 20khz-bandwidth channels on 223.52Mhz and 446.10Mhz. This would allow them to setup an inexpensive repeater system by interconnecting the voice/mic connections via a resistive circuit on two simplex radios; and

would not require expensive, and difficult to understand, cavity and duplexer filtering at the repeater station site. User radio costs would be low, as they would only need a single simplex radio. As a result of the characteristics of this type of repeater, the repeater builders and users would learn to coordinate frequencies, and user groupings based on environmental conditions, so as to acheive optimal results.

Colt license users would also be subject to the following restrictions:

(1) Individuals applying for a Colt Class license must be under 19 years of age at the time of license application or renewal. The license is valid for 5 years.

(2) Fixed control station antennas will be no more than 6.1 meters (20 feet) above the ground or above the building or tree on which it is mounted.

(3) Transmissions limited to 5 watts ERP, or less.

The new license class would have the following goals:

1) Encourage more young people to enter the Amateur Radio Service, by providing an entry-level ARS license class that includes privileges allowing reliable short-range voice and data communications.

2) Not significantly impact existing users of the affected Amateur Radio Service frequency bands.

3) Encourage basic knowledge of radio, electronics, operating principles and etiquette among a wider segment of the general population.

4) Take advantage of the success of the Family Radio Service, and provide a path for those young users interested in further radio experimentation.

The Colt license exam would consist of 25 fairly simple questions. Emphasis would be put on understanding the existing operational, safety, etiquette and emergency questions from theTechnician Class question pool that relate specifically to Colt Class license privileges. All questions containing calculations would contain small integer(whole-number) input values and have relatively small integer results. Colt licensees would be required to have a general understanding of Ohm's Law and Power relations. They should be required to have a general understanding of how antenna length relates to wavelength; and have a knowledge of transmitter power, antenna gain, transmission line loss, and the ability to perform a simple ERP calculation would be required. General knowledge of simple resistive circuits, and their power dissipation, would be required. Knowledge of capacitors and inductors would not be required.

Stewart Teaze - N0MHS

3271. Re: I need a cheap CB radio

Newsgroup: rec.radio.cb
Date: 2001-01-19 06:54:17 UTC
From: John Smith <johnsmith@microsoft.com>
Message-ID: <GwR96.3042$RW1.695098@news.uswest.net>

Cross-posted to: alt.autos.4x4.chevy-trucks,alt.ham-radio.marketplace,alt.trucks.chevy,rec.autos.4x4,rec.radio.cb

I have purchased several things from cyberrebate.com. The stuff ships in a day or two, but the rebate takes a while to show up. I just got a rebate yesterday, and they say they will send me my rebate for the CB in about two weeks.

I got another CB from them about a year ago. They eventually pay up, but you have to plan on being without the money for a few months.

And don't forget to send in the rebate. They plan on breakage in the rebates to make money. I sent one rebate in on the last day. In the status, they said that it was late and they wouldn't honor the rebate. I sent them an email and they moved the rebate status to completed, so I should get my check soon.

Oh, and if you join spree.com you can get 5% cash back. So if you buy the CB you can actually come out ahead almost twelve bucks!

I like getting paid to get stuff!!

You can join spree at http://www.spree.com/default.asp?x=michaelross

Just make sure you send in your rebate forms!!

Michael

Would you please tell us which issues of great interest you write about in
the other group? Since you are free to write about ANYTHING? You wouldn't
concentrate all your energy on illegal activities, foreign rigs, linears,
would you? Gary

Hi, Stewart. Two thoughts.

(1) You beat this horse to death last year.
(2) You have been asked numerous times to void cross-posting to
alt.radio.family. Please post separately to that NG. Thanks.

If you respond to the Colt License Proposal thread, please drop
alt.radio.family from the header. The majority of FRS users are simply
American families using these low-powered radios as short-range "intercoms".
They are not radio hobbists. Thanks.

I have a Realistic TRC-212 (21-1662) for sale. This is the full size 40 channel unit with carrying case. High/low TX power switch. Around 5 watts output on high. LCD display with TX and receive meters. Great shape. Original long (around 5 feet) center loaded antenna. Has external antenna, power and charger connections. Has an 5-pin mic connector as well. Requires 8 'AA's or 10 'AA's rechargeables and you can recharge the batteries WITHOUT taking the batteries out.

Asking only $ 45.00 (US$) INCLUDING shipping from Canada

Great deal ! ! !!

A Picture can be e-mailed.

It's become obvious to me that you are concerned less with trying to solve the problem of widespread illegal operation, and bad attitudes, than you are with just causing hate and discontent. I'm on your side (in theory anyway), yet you hurl insults at me as well as the opposition.

This approach will do NOTHING to get anyone to some sort of mutual understanding of the issues, or the remote possibility of accepting that there MAY be a problem after all.

> I hope this is not the case.

This newsgroup is only one small segment of the hobby user base. In my
area there are few people that would qualify as "big guns" (Although
there is one local group that thinks they're bad-asses because they can
run 200 watts in their cars).

This newsgroup started out (at least when I started lurking here), as a
forum by mostly technical types, sharing their experiences with other
techie types, and it was a mutual learning/sharing experience.
Naturally, there isn't much experimenting that you can legally do with
CB (other than antennas and microphones), so most topics dealt with
illegal mods and add-ons.

I guess the difference now is not what's being discussed but the attitude by which it is discussed. Illegal stuff used to be considered a "use at your own risk", or "use reasonable judgement" affair. Now it's more like "It's my God given right to be king of the airwaves, and screw the FCC and anyone else that tries to stop me".

I really can't condemn illegal operation, since I've been involved in it as well. But I am really becoming disgusted with the degree and sheer volume of operators that seemingly have the goods, but not the knowlege to understand what it is that they're doing. A whole market has developed around "CB science", and revisionist RF (according to the CB doctor) theory. Most people run dirty radios, because they've been told that that is the "proper" way to run a "big gun" station. It's hard to convince someone that they'd have been better off not spending that extra $100 to have their radio "souped up" by the local screwdriver technician. Truly knowlegable types are hard to come by, and even some of them have been corrupted by the money making opportunity that they have at the hands of gullible CB operators, that are just waiting to be told how much money they have to spend to be the "big dog". I know many people in my area that are constantly taking their "souped up" radios back to their "doctor" to fix some little glitch that comes up. It might be off frequency, it might be distorting on SSB, it might be squealing when you transmit, it might be blown finals. Yet the people that are smart enough to leave their radios alone, seem to go for years without anything worse than a blown out panel lamp. I've personally undone the work of screwdriver techs an untold number of times, and made that radio work properly again, and in the end the people were happy, because it stopped giving them problems.

The biggest problem on CB today is ignorance, and the lack of consideration and courtesy. If these problems could be tackled, we wouldn't need FCC rules.

Oh nooooooooo....NOT again!

Stewart, I think this "new" license class was the RESULT of one
too many "Colt's".....Colt 45 Laager's, that is......

The FCC MAY assign another RM, but I bet a Happy Meal that they
just say "Been There, Done That".....

They just got done paring down the number of classes...They did
NOT do that just to make room for NEW licenses.

There are already NUMEROUS stories of YOUNG kids (7-8-9) passing
the PRESENT Technician license, so I really doubt they will predisposed
to creating something "new".

If you REALLY want to make an impact on kids in Amateur Radio, try
writing a text FOR kids...THAT will help them along the way. Trying to
wrangle a "new" Amateur Radio license out of the FCC for posterity's
sake isn't it.

The Technician Class license is so easy to get now it's not even funny. You sure you are not being a little jaded in your view when you think every kid wants to work DX on H.F., hence starting out on CB Radio shooting skip?

You need to check the FCC enforcement logs. There have been more than a few Tech's zapped by the FCC for doing what you are doing. Particularly if you are using your mobile Ham rig to do it with. A Tech license is so easy to get your wife would have no problem, even 10 year kids have them. What a lame excuse you used to justify your feebanding.

I have learned that one Maniac. I buy from Panther Electronics now. After
my first post I was sent an e-mail my someone at Copper who made those
claims and was just posting what they told me.

The funny thing here is, that they emailed me but decided not to make a
post in the group for whatever reason.

Stewart,
Why are you wasting your time and ours with this? There
is already an 'entry level' license. It sounds like you
are advocating another 'junk' license. Give it a rest.
'Doc

The current mainstream Technician license class is easily attained
by young people and meets these goals perfectly; your proposed Barbie
Doll class would establish a channelized CB-like ghetto separate from
mainstream amateur radio, creating additional "we vs. them" divisions
in the Amateur Radio service. Personally, I think this is just another
spin on your attempt to establish a defacto expansion of FRS and MURS.

CD the course can be much lower than $8000. But beware of "prep" courses. They are generally $600-$2100 and are like the way these hams get their licences: I give you the answers and you remember them. Not exactly an education. Your starting salary will be between 35K-50K. You will be able to afford it.

CD,

Buy the MCSE book set (from microsoft or whomever) and study. The testing is dirt cheap $25-$75 per test via Pometric (sp?). Out here in California, MCSE's are a dime a dozen, but starting pay is 40-55k on average. I dont think I would pay to take courses on it though. Install win2k, get some books and hands on. If you really want to make money and not spend it on obsolete in 2 years operating systems, check out some Cisco certs. Dont know if you like the networking thing, but the CCNA is a great place to start. CCNA's on the average will make 10k more than any MCSE. I also reccomend becoming Sun certified for hardware/solaris. This is where the money is at, not in micro$crap stuff.

Just my 3 cents =oP

If I said, "Gamma waves are the strongest on the other side of
Pluto", you could find no book to contradict me. It is nonsense
with no supporting data. Books do not contradict such nonsense.
The burden of proof is upon you to support your ridiculous claim.

The article specifically referred to stubs, doochebag.

> Didn't you even read the first line?
> "That completes our conceptual view of stubs." The word 'stub' isn't
> used anywhere else in the quote. The paragraph is a seperate concept
> and stands alone, as it was intended by it's author.

The article was based on system that relied on matching impedances
such as is done with stublines. They are interrelated but do not
require each other. I was merely pointing out the context of the
article which you still don't understand.

> >Secondly, note that the author says "the resistance of the

> line, . . ."

There is nothing "suspicious" about it. I left it out because
I made no assumption that the antenna was matched. This cannot be
assumed for an antenna. However, for CB radio service, it is
a pretty good assumption that the radio and transmission line
are 50 ohms. Get it?

> > Since you pulled this article out of

Many of today's CBs have nothing to tune in the output circuit.
State-of-the-art RF design uses broadband circuitry to reduce the
need for tuning and increase manufacturability.

Ham radios are indeed more likely than ever to operate at 50 ohms.
However, you will still find transmitters or amplifiers with a
plate/load tuning mechanism to allow tuning for a conjugate match.

> >The article is referring to a situation where the radio output

If the transmitter is 50 ohm and the transmission line is 50 ohm,
no length of coax will bring a mismatch closer to the necessary
impedance for a match, 50 ohms.

> >Now, consider a true-to-life CB radio scenario. The transmitter

Correct so far.

> If the length of the line can be changed to
> minimize that mismatch, then yes, the length of the line has an effect
> on the power transmitted to the antenna.

This "if" condition is never true with a typical CB radio installation
(50 ohm radio with 50 ohm transmission line).

> The length of transmission
> line needed to minimize any mismatch is frequency dependant, and turns
> out to be any odd multiple of a quarter-wave. For V=0.66, those

This is simply bullshit. It is not true. An odd multiple of a
quarter wavelength of transmission line does NOTHING to minimize
a mismatch. You cannot support this claim in ANY way.
You don't know what you're talking about. You're an idiot to
believe this.

> Do you have a FSM and a 3-foot section of coax? If so, test it for

Work or educate yourself into the computer field (volunteer work for a nonprofit agency is an excellent way to gain experience) and work some entry-level jobs. Experience counts for a lot more than paper at a job interview.

3306. Re: What the Radio Makers need to know....

What's wrong with you guys, you don't read the FCC rules a hole lot.
Maybe all the trollers here have a good point about all you illegal
CB'ers.

The FCC Rules clearly state that a beverage can or glass holder shall be
supplied with the radio, and a plastic adapter insert to allow for the
proper holding of a wine glass, and smaller insert adapters for
shooters.

Lets get it right, please.

Hey Dave,

I totally agree. Wanted to add one thing though. The vintage S9 magazine auction reminded me. I once looked through a bunch of these S9 magazines from the 60's and 70's. I was amazed. A magazine devoted to CB - and it was bursting with all kinds of experimentation, projects, tech articles, etc. yet steered clear of illegal stuff. How-to articles about antennas, power supplies, audio add-on circuits, clubs, accessories, plus tech tutorials, equipment reviews, etc. - GREAT STUFF filled the pages. So interesting CB *is* possible without amps and freebanding.

Hey, why don't we just finger print them and give them a license. If a
young person cannot pass the tech exams today they are:

1. really NOT that interested in radio anyway
2. retarded and illiterate (I know lots of extras that fall into that
category)
3. Wanting to simply sign on dotted line for radio frequencies access.
(To my knowledge this is still a violation of ITU standards)

There are five and six year olds who have passed the EXTRA class test.
That's how easy it is to pass a ham exam with very relaxed exam
requirements.

its funny you mentioned cisco. for whatever its worth , that is the way i am going to go. i have just started reading the ccna study book. got any ideas on cisco routers i could use in the home on a cable modem or dsl line in order to learn the cisco router ios language, cli, and configuration. i was thinking about getting a 2503 router so i can use a dumb terminal, etc. and do some hands on learning , with the book work. any comments,....cd is out....

well to tell you the truth, the fact that there is a shortage of
qualified computer types, there has been a plethora of private computer
schools. like i said, it is impossible to cram 4 years of college into
a few months. therefore to me, most of these schools are in business to
sell you instruction. i have read some stuff on the internet, that some
think that the msce is not worth the paper it is written on. you look
in the newspaper and what do you see? minimum requirements are usually
a bs in computer science with 2 or 3 years experience. to be able to
absorb that much information that fast , at least for me, is
impossible, because i have to have to time to think things through, and
chew on for a while, if you will. but on this ccna stuff, they talk
about this course that they think you should take before this one. the
title i believe is icnd, interconnecting cisco network devices. oh
well, another 3 inch book to devour, rocking on,.....cd is out.....

i agree, experience is a good asset , no doubt about it. always has
been. book learning can take you only so far. then you have the real
world, the one the pointed headed authors of your college texts usually
never see,.........cd is out........

Glad to see that you have the problem resolved.

BTW I spoke to the only person I know who has purchased a radio from EEI.
They are very happy with the radio that they purchased and would recommend EEI
to anyone. "The service was great and the radio does what they said it would."

Indeed it would be a somewhat segregated area for younger people to get started in ham radio. But that is a big part of what could make this work, as the main idea is to set up a small, less intimidating environment for young beginners, where they can work primarily among their peers, and those willing to help them learn. I have thought about what you are saying about a "we vs. them" division, such as what used to exist with the code/nocode divide(and I suppose still persists); however, I think the difference between a Colt and a Technician would be akin to the difference between a General and an Extra, and not like the old difference between a Nocode Tech and a 13wpmGeneral/20wpmExtra that was so devisive.

> Personally, I think this is just another
> spin on your attempt to establish a defacto expansion of FRS and MURS.

Well, I suppose you are right there. If something can't be done to create a better environment for kids to experiment on the virtually unused VHF/UHF bands(with the noted exception of a few high-profile repeaters), then nature will take its course, and water will follow a path of least resistance. I'm just trying to create a small area of "lower resistance" and "higher potential" for young experimenters on the ham bands, where I think it deserves to belong - rather than in the Personal Radio Services.

I look at the current "communications gap" situation that is developing between the United States and Japan/Europe in the same vein as the "missle gap" that started to develop between the USA and USSR in 1958. However, today's problem is probably more real and dangerous,

yet less obvious, and more insidious than the problem of 1958. There will be no "Sputnik" to help immediately shock us back to our senses, and therefore no equivelant to the National Defense Education Act will be forthcoming anytime soon.

I am curious - are there any hams that remember what the policy of the ARRL, FCC, and hams in general was in 1958, in regards to the issue of Sputnik? Were there any pushes back then to get more young people interested in Amateur Radio? From what I can tell, Sputnik does seem to HAVE been a factor behind the push for implementation of incentive licensing during the late 50's and early 60's. However, as is usual in the Amateur community, change occurred very slowly and painfully - with the the first real change taking 10 years to even be started to be implemented.

Interestingly enough, I found the following on the ARRL web site:

http://www.arrl.org/news/stories/2000/10/04/2/

It mentions how Sputnik spurred the creation of the NDEA and NASA(and
eventually our trip to the moon), but it doesn't mention anything about
hams, or what hams thought or did about this significant event.

I think the only way to rapidly attract young folks is go all the way with the licensing. Not even a test. Just a small, tax-write off contribution to the FCC, like the 6 dollar cb license in the seventies. No code and one class. A permit and you are on the air. Gone are the days....
My argument? Technology is at a point where your pc can literally run your radio set up and virtually correct any problems. Many folks still don't have a clue as to how television works. But that doesn't stop them from owning one (except in the UK :) .
Fortunate or unfortunately, the reality is that MOST novices (No, not the class) interested in radio today, are interested in talking as a hobby, not learning how to build a unit.

I'll bet every one of those five and six year olds have an IQ in
excess of 120 and you certainly cannot say that for every adult ham.

Wrong...wrong...wrong...What you need to do is have these "kids"
(as you would ANY newcomer) IN THE MAINSTREAM. They don't need to be
off in some netherworld of their own.

Part of the problem with the now defunct Novice license was that
mmany people didn't want to go up to the Novice subbands. Take a
listen there lately? THERE is your "Colt" class license right now.

In Chattanooga we have quite a few under-21 operators, and EVERY
person I hear "working" them takes extraordinary steps to be
accomodation and helpful. These "kids" are at Field Day, ARES
activities, and occassional club meetings. And I CAN'T believe that we
are the only club/community that is so disposed to do so.

My suggestion...?!?! If you haven't sent this "proposal" off to
the FCC yet, DON'T. They are going to get used to seeing your name
attached to frivolous RM's and may, in the future, automatically turn
their collective noses up on any subsequent submissions you may make,
regardless of how truly beneficial it may be.

Quite the opposite would be true!

That segregation absolutely guarantees that the concept would fail!

The channelized "childrens band" would be held in disdain by mainstream amateurs, the participants would be insulated from mainstream amateur practices and procedures loosing the benefits of exposure to more experienced and skilled operators, and they would be barred from participating the host of activities which would occur outside their cozy little ghetto.

> I look at the current "communications gap" situation that is

> and inductors would not be required.

Most telling, however, is the stupendous chasm between your stated concern about the "communications gap" and your incredibly minimilistic proposed technical requirements! Since radio today is all about digital circuitry and RF, I'd expect the tests to emphasize those areas. Instead the theory you'd require is hardly sufficient to design a flashlight! There is no mention of digital principles, and worse yet, a specific prohibition of material on capacitors and inductors (components which are the heart and soul of radio technology)! This dichotomy discredits your stated goals of "encourage basic knowledge of radio, electronics" and "provide a path......interested in further radio experimentation".

This whole thing is a non-starter, dead on arrival.

I think that internet chat has drawn off and weeded out most of the
people that are only interested in talking to other people.

My wife played with our home NT network, managing users (the kids),
changing configurations, whatever. She learned enough to get a help desk
job at a local HMO without a single day of formal training or experience
(by formal, I mean documented).

Her best friend who earned her MCSE through pure coursework but had
never actually worked in the computer field, now has an entry-level job
at a software firm and calls my wife for tech support.

I understand that the new MCSE requirements will make it very difficult
to get certified without field experience.

There was no lack of young people then, I was one. Kids flooded into the hobby. The creation of the Novice license in 1951 was extremely successful in luring kids into ham radio. The availability and readily accesibile dirt-cheap military surplus radios and parts was another huge boosting factor. Any kid could and many did get on HF for well under a hundred bucks in 2001 dollars. Srounging was an artform and part of a perenially-broke kid becoming a ham and a lot of fun in itself.
>
Just about all large high schools had school-supported ham clubs and club stations. The 80 & 40m Novice bands crawled with other kids. A kid could actually understand the circuitry and get a soldering iron into the radios. The VHF & UHF bands were for experimentation for the most part. There were very few antenna and tower restrictions, "real people" didn't live in apartments. If you were a kid interested in electronics the customary gateway to an EE was a ham ticket. Got ya points with admissions officers.
>
Life in general was also very different from today. The overall pace of life was slower and simpler, people had more spare time. Ya didn't mess with girls until you were 16-17. There were no home computers. There were ham stores in every populated area. There was no horde of CBers, no cell phones, no Internet, endless list.
>
It's all changed and I have my doubts about how much "better off " ham radio is today vs. 1958 even though the number of hams then was some small fraction of today's license count.

It wasn't particulary relevant to ham radio much beyond a few hams becoming "Sputnik Chasers" because they knew how to use HF radios and had the equipment. The launch of Sputnik I really caught the aerospace industry with it's rado pants down and hams jumped into the vacuum for the first few days after Sputnik popped up on 15m. Beyond that the space race was pretty much a ho-hum as far as it's impact specifically on ham radio went until hams got into the game with the Oscars much later.

If you don't have the experience, it's a good way (having the certification) to land a job that pays pretty good. If you do have the experience, (IMHO) it's not worth it.

replace the resistor or jumper wire that you used to make the talkback
with a variable resistor of a similar value. You can scavenge a little
trimpot off of a dead board somewhere that should work fine

The thing is, the percentage of hams using HF is way down too. To be
able to reach a critical mass of other people to communicate with on
VHF/UHF, you really need more people.

3329. Re: msce certification.....

Newsgroup: rec.radio.cb
Date: 2001-01-19 21:15:32 UTC
From: Gene <webmaster@zylay.com>
Message-ID: <3A68AE74.64E29DD8@zylay.com>
Source record: 69381

Around here, starting MCSEs start out at around $20K if they can
convince someone that they know their butt from a hole in the ground.
Even then, the tests and all are a lot easier to understand if you've
actually worked with some of the ideas or have access to a live network
to see these things in action.

LOL ROFL. That's why I have cable.
PS Hope you sell it to a guy that has a Ham in the neighborhood so the Ham
will get blamed for the dirty amp...grin:)

I am posting this not as a complaint,More as an advisory.
First the conditions,as of late have been very good as a whole.You are to be commended.
In contrast,though todays conditions were less than you're best effort.And I think some points need to be addressed.
I really don't think that 8 seconds +/- 10% is a reasonable amount of time to allow for DX contacts.It really is not good enough for the majority of operators to just hear someone cal their #'s and thats it,nothing else.
I did appreciate the good conditions you made available earlier in the day allowing me to speak to Mr.Pain in the mobile and laser 100.And while it was a very nice touch to put 148 London England in my recieve 2 days in a row.I really don't think that what you did to 711 St.Louis was necessary,Nor was the treatment you gave CC Hammer in the mohave desert proper either.
My suggestion to you is to smarten up you fickle Bi&(ch or we'll all just go out and buy some more horse power and make a go of it on our own!
Thank you for you're time.
Sincerely

257 NH. On the wheels

3333. Hams blamed for "dirty amps"

Newsgroup: rec.radio.cb
Date: 2001-01-19 21:44:59 UTC
From: h <not@aol.com>
Message-ID: <t6hd58i87mnlee@corp.supernews.com>
Source record: 69385

I think it's funny that when we use a 1.5 kw amp that some guy with a ham license down the street gets a bunch of angry phone calls because of interference.
He is visible and has a visible antenna. We know enough to be subtle.
Ha Ha Ha Ha HA
That's what REALLY pisses them of:)

Dunno then, you'll have to get someone who knows that radio. Usually
it's just a wire or resistor from the mic + wire to the audio amp going
to the speaker. Replacing that with a trim pot gives you something that
you can turn up or down.

3339. Follow the Money

Newsgroup: rec.radio.cb
Date: 2001-01-19 22:17:17 UTC
From: K0HB <K0HB@arrl.org>
Message-ID: <94aed5$8mn$1@nnrp1.deja.com>
Source record: 69393
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.antenna,alt.radio.family,rec.radio.cb

When you don't understand why somebody is doing something which seems senseless to you, sometimes it pays to try to "follow the money".

In this case it led me to a company called "PubCel". According to their web site, that company is involved in:

"Wireless Entertainment and Communications Solutions:

- MURS and ARS Voice and Data Communications Systems

- FRS and GMRS Voice Communication Systems"

I think it is safe to say that the "ARS" acronym might mean "Amateur Radio Service".

Also according to their web site, the company President is none other than Stewart Teaze, N0MHS.

Suddenly this proposal for the "Barbie Doll" Amateur Radio license isn't quite so senseless.

3345. Re: Coax length: One last time.

Newsgroup: rec.radio.cb
Date: 2001-01-19 23:07:23 UTC
From: sparky@cet.com
Message-ID: <3a68c8a6.9526851@news.cet.com>
Source record: 69398

For those that are sick of the banter, the technical stuff is on the bottom half of this post.

On Fri, 19 Jan 2001 16:40:26 GMT, Coax Length Police <anylength@willdo.com> wrote:

>You cannot provide one single paragraph from the book that supports
>your claim that coax radiates when there are standing waves.
>There are none to be found in that book. You are a liar, plain and
>simple.

It is in the book. Read it. It happens. Test it. Besides, that is not the only subject on which you called me a liar -- why ignore the rest?

>Nothing near that page matched what you posted. You lied.

Here's your requested verbatim: "The incident and reflected signals have the same phase velocity; but since they are moving in opposite directions, the phase relationships of the two signals are continuously changing." Sounds real close to what I said. More proof you didn't read the book. Let's do a check: What's the first word on page 520, and the last word on page 546?

>If I said, "Gamma waves are the strongest on the other side of
>Pluto", you could find no book to contradict me. It is nonsense
>with no supporting data. Books do not contradict such nonsense.
>The burden of proof is upon you to support your ridiculous claim.

I was using the same 'burden of proof' that you yourself kept demanding: "Prove me wrong. You can't!" You dish it out but you can't take it. Since you now have the book (so you say) it shouldn't be any problem for you to locate any discrepancies between what I have said and what is written in the book. Go for it.

>> >Enough background information; now, to the current quote.
>> >
>> >You are using this quote out of context. You have taken an
>> >excerpt from a ham radio article which uses stub lines to
>> >match impedances.
>>
>> You didn't read the article, so don't tell me what is 'in' or 'out' of
>> context when you don't know. It is an article describing stubs, what
>> they are and how they work, not about their applications. And the
>> paragraph was written out of context by the author, not me.
>
>I know it is out of context because I understand what it is saying.
>You don't.

>
>> >First of all, stub lines are virtually never used in a CB radio

>>
>> You are the one that is out of context now. I didn't post the
>> paragraph to talk about stubs.
>
>The article specifically referred to stubs, doochebag.

Doochebag? Now you are resorting to ad hominems that you can't even
spell correctly? That's lame even by your standards.

>> Didn't you even read the first line?
>> "That completes our conceptual view of stubs." The word 'stub' isn't
>> used anywhere else in the quote. The paragraph is a seperate concept
>> and stands alone, as it was intended by it's author.
>
>The article was based on system that relied on matching impedances
>such as is done with stublines. They are interrelated but do not
>require each other. I was merely pointing out the context of the
>article which you still don't understand.

You are getting ridiculous. Your last three statements show that your
reading comprehension skills really need some work. If they were up to
snuff you would understand what is meant by the first sentence in the
paragraph. And you would be able to understand the writings in an
undergrad introductory textbook.

>> >Secondly, note that the author says "the resistance of the
>> >antenna, line and transmitter were horribly mismatched."
>> >Virtually every CB radio has a 50 ohm transmitter and a 50 ohm
>> >transmission line. They are matched. The only item left to
>> >match is the antenna.
>>
>> You suspiciously left out the "non-reactive antenna" part. And note
>> that the next sentence begins, "If the load is not matched to the
>> line, . . ."
>
>There is nothing "suspicious" about it. I left it out because
>I made no assumption that the antenna was matched.

Well, the author did. Read it again.

> This cannot be
>assumed for an antenna. However, for CB radio service, it is
>a pretty good assumption that the radio and transmission line
>are 50 ohms. Get it?

I do, you don't. That is exactly what the author was talking about --
antenna matching. Read it again.

>> > Since you pulled this article out of
>> >a ham radio article, it discusses conditions where the radio
>> >output impedance can be adjusted by tuning the output network.
>> >This is a non-scenario for CBs.
>>
>> A great many ham radios use 50 ohm transmitters with 50 ohm
>> transmission line, so when you say that "this is a non-scenario for
>> CBs" you might as well add that it is a non-scenario for ham radios as
>> well. But you would still be wrong because many CBs transceivers can
>> be tuned for a different impedance. I have tuned several to use RG-11.
>
>Many of today's CBs have nothing to tune in the output circuit.
>State-of-the-art RF design uses broadband circuitry to reduce the
>need for tuning and increase manufacturability.

I haven't seen one yet that didn't have a coil and a cap on the output
of the final. If I ever find one that doesn't, it shouldn't be too
hard to put them in if needed.

>Ham radios are indeed more likely than ever to operate at 50 ohms.
>However, you will still find transmitters or amplifiers with a
>plate/load tuning mechanism to allow tuning for a conjugate match.

I will amend it to say "non-scenario for _many_ ham radios as well."
But my statement remains valid either way.

>> >The article is referring to a situation where the radio output
>> >network and/or coax stubs are being tuned to provide a conjugate
>> >match. In this scenario (a non-CB radio scenario), the transmission

>> tuned to match the line's input impedance OR the length of the
>> transmission line can be changed to bring the line's input impedance
>> closer to that of the transmitter.
>
>If the transmitter is 50 ohm and the transmission line is 50 ohm,
>no length of coax will bring a mismatch closer to the necessary
>impedance for a match, 50 ohms.

Which match are you talking about? The one between the antenna and the
coax or the one between the coax and the radio? I think we may have
discovered the source of your problem (sarcasm omitted) . . .

>> >Now, consider a true-to-life CB radio scenario. The transmitter
>> >has a 50 ohm output impedance and the transmission line has a

>> >characteristic impedance of 50 ohms. Even with a mismatched
>> >antenna, the length of the coax has no effect on the percentage
>> >of power transferred to the antenna (except for minor attenuation
>> >losses).
>>
>> If the transmitter is 50 ohms and the line input impedance is not,
>> there is a mismatch. The transmitter is the source and the line input
>> is the effective load. The greater the mismatch, the less power
>> delivered to the load.
>
>Correct so far.
>
>> If the length of the line can be changed to
>> minimize that mismatch, then yes, the length of the line has an effect
>> on the power transmitted to the antenna.
>
>This "if" condition is never true with a typical CB radio installation
>(50 ohm radio with 50 ohm transmission line).

Alright, let's set up an arbitrary system. Radio = 50 ohms. Coax = 50 ohms. Antenna <> 50 ohms. The mismatch between the antenna and the coax causes the input impedance of the coax to be something other than 50 ohms. Any problem with that?

Now we have a source (the radio) and an effective load which is the input to the coax. To this you already agreed above. When there is a mismatch between a source and a load, some of the power is reflected back into the source. The greater the mismatch, the greater the power reflected. Ok so far?

Above you said, "Changing the coax length does not change the SWR but it does change the transmission line input impedance." So if the impedance of the source doesn't change, but we can change the impedance of the effective load (the coax input), then we can change the match by changing the length of the coax. Simple enough?

When we change the match, we change the amount of power delivered to the load. So by changing the length of the coax we change the power delivered to it, and therefore the power delivered to the antenna. Presto, coax length really does matter.

If you can't follow a progression that simple, I guess I could draw a picture . . .

>> The length of transmission
>> line needed to minimize any mismatch is frequency dependant, and turns
>> out to be any odd multiple of a quarter-wave. For V=0.66, those
>> lengths are 6,18, 30, 42, . . . feet.
>
>This is simply bullshit. It is not true. An odd multiple of a
>quarter wavelength of transmission line does NOTHING to minimize
>a mismatch. You cannot support this claim in ANY way.

>You don't know what you're talking about. You're an idiot to
>believe this.

It seems the only way to explain things to you is very, very simply. I'm not even going to try to make this as simple as the last explanation, so just skip it and read below.

>> Do you have a FSM and a 3-foot section of coax? If so, test it for
>> yourself.
>
>I did. Nothing happened.

Then your antenna was properly matched to the coax, and you are in the pink. Try using an antenna that is not matched. The signal strength will change. I have done it several times and it changes every time I do it. I have seen many techs do this test, and it worked for them every time, too. Everyone should try it and see that, when the antenna is not properly matched, coax length really does matter.

Boy, do I EVER remember! I remember the huge paddle in the principal's office with holes drilled in it! He wasn't afraid to USE it, either. And, like you referred to, if you got paddled at school, you got one at home, too! It was a given! I remember all of that and more--like Studebaker cars, Packards, Hudsons and Henry Js. Nashes that looked like upside down bath tubs and Kaisers and Willys (not the Jeep). There was the "secret" swimmin' hole and getting chased up a tree by a mean bull. There were "chicken chasins'" to catch Sunday dinner, and chasin' chickens for the heck of it. "Y'ALL QUIT RUNNIN' THEM CHICKENS 'FORE I WHUP THE DAYLIGHTS OUTTA YA"! There were cattle roundups on horseback where even us 10 yr olds got to help. Getting to drive the "Johnny Pop" (John Deere) tractor while gathering in hay. Staying out of the way of the swans that called our pond home--you ain't never been flogged until you've been got a-hold of by a angry swan--or run breathless by a gander that's pecking relentlessly at your heels. Or run up onto the tractor shed by a boar hog that you didn't know had rooted out of the pen! Or the whipping you got for putting a bug down a girl's dress at the church social. Yet her EEEEEEEK! was worth it! How about putting half a water melon rind under the Sunday School teachers rear wheels so you could see her spin a wheel (It wouldn't last long, but good for a short laugh). Selling Grit newspapers so you could get that Super-Duper Mega Blade pocket knife that was really only worth about $1.00. Putting a whoopie cushion under your Mom's chair just before she hosted the Ladies Afternoon Garden and Tea club. Trying to act as if you knew nothing about it! Or going to school on the rough, unimproved rural roads and being late because the bus got stuck--we liked that!!

Yes, every generation has their own particular memories. Ours were just much more innocent, and, in my opinion, it gave us more time to grow up and mature. We didn't have the pressures kids have today. Most of my upbringing was in the country. We had chores, stern, but loving parents who brought us up to fear God and work for a living. About the only weapons we had in school were spit wads that we shot up onto the ceiling while the teacher wasn't looking. Nowadays, a small pocketknife isn't allowed on school grounds. We usually got our first pocketknife around 4th grade along with a Daisy air rifle. They were freely carried to school and used to carve whistles in the spring which the teachers collected as we dared to "play" them in class--usually ending with a drawer full of them by school's end. I was 9 yrs old when we got a used B&W TV on which we got a total of 3 channels! We didn't have a lot of worldly goods, but we didn't miss them. Life was simpler then, and I wish in vain that we could go back to them.

Thanks for the memories!

Jerry

I've never tried to hide the fact that I'm trying to create a
business. Quite the opposite - why would I list the web site on the
signature to all my posts, if I was trying to hide something

Hey, Hans, I wonder why you switched your approach to this slimly
veiled "personal attack"? It couldn't be that I was right about the
point regarding inductors and capacitors on the Novice test, could it?

Let's stick to the point at hand. You made a good point about the lack
of digital modes in the proposal - THIS is the kind of stuff I'm
looking for.

SPECIAL FCC ADVISORY

This is a special advisory from the Federal Communications Commission. The FCC is requesting that any hams who discover illegal radio gear being advertised for sale on the various on-line auction sites such as eBay send this information to them at a new electronic address. This is FCCINFO@fcc.gov. Again that new address is FCCINFO@fcc.gov. Using this e-mail address will help expedite investigation of information provided. (FCC)

Saw this on a list and thought people might be interested in it.

Oh, and screw you Aaron.

3389. How 1mangayboy was made

Newsgroup: rec.radio.cb
Date: 2001-01-20 00:39:21 UTC
From: "www.kp82.com" <kp82@my-deja.com>
Message-ID: <94amnpfru1@nnrp1.deja.com>
Source record: 69442

Was conceived in the following manner:

His mama was a lesbian and her girlfriend was a bisexual nurse at a
home for World War 1 veterans with the clap.
Every night before she came home to 1mangayboy's mama she would give
each of her 77 clap infested patients a blow job.
She came home horny one night after all the blowjobs and went down on
1mangayboy's mama. 1mangayboy's mama had such a filthy stinkin' coochie
that her lesbo nurse girlfriend puked up all the jizz from the blow
jobs right on her and she got knocked up that way. Every year
1mangayboy has to send out 77 father's day cards.

3391. Keyclowns admit defeat

Newsgroup: rec.radio.cb
Date: 2001-01-20 00:41:13 UTC
From: "www.kp82.com" <kp82@my-deja.com>
Message-ID: <94amr8fud1@nnrp1.deja.com>
Source record: 69446

I think I am cool because I have ILLEGAL KEYCLOWN amps, coax
with
excessive power-
handling-specs (pudwack), and "GO ILLEGAL" announcements - I am a
joke and a compliment to people with Downs syndrome, who are more
intelligent than ILLEGAL KEYCLOWNS (pudwack). And just LOOK at the
sissy ILLEGAL KEYCLOWNS go apeshit when Voobner and the MIGHTY
N8wwm start telling us we are ILLEGAL KEYCLOWNS.

The only way I can fight the truth and justice of the MIGHTY N8 and
Voobner is to be an anonymous cretin dedicated to defying federal radio
laws.

Fellow ILLEGAL KEYCLOWNS, what shall we do? The MIGHTY N8 and
Voobner are just too smart for our disease infested minds....
[NeboDweebo:I think we need more BOOZE!!!]
[Phoneyboy: I vote we make anonymous anti Voobner and N8 posts]
[1mangang: I suuuuuuck N8 whenever he wants me to!!]
[tnom: Eats moldy tomato and pukes all over Scottiekins]
[->splat<-]
[Scottiekins: Licks up puke and sperm mixture and offers tnom another
tomato with a horny look on face]
[Twistie: Eyes Scottiekins enviously, wipes sperm-tomato puke off tnom&#65533;s
lips and licks his fingers]
[NeboDweebo: I think we need more booze!]

Wow, The Keyclowns sure have powerfully smelly friends.

Yes, and you DON'T because you bathe on a regular basis, unlike ILLEGAL
KEYCLOWNS. We are condescending, paranoid buttmonkeys
whose every fantasy is made real by the magic of our gayness. You are a
threat to our moronic, homo life style, and we have to talk shit to you
because we are too stupid to get ham licenses and plus we like keying
our
mikes and saying &#65533;AAAAAHHHDIO, AAAAHHHDIO&#65533; 50 times a day and we
can&#65533;t do that on the ham bands because we would be held accountable for
our conduct.
Mark it down in your little booklet, we KNOW Riley is gonna get us!
Heh.. In
any event, I accept the fact that we are homo ILLEGAL KEYCLOWNS
and run on the platform of making love to NeboDweebo.

Thankyouverymuch.
[NeboDweebo: We need more booze!]
[applause & stuff]

3392. Scottiekins in court

Newsgroup: rec.radio.cb
Date: 2001-01-20 00:43:14 UTC
From: "www.kp82.com" <kp82@my-deja.com>
Message-ID: <94amv1fve1@nnrp1.deja.com>
Source record: 69445

Attorney: So, Scottiekins, you and a group of people who are involved in a
conspiracy to violate federal law are suing a legal ham operator for complaining about your conduct, is that correct?

Scottiekins: Yes sir, we can't take it anymore. It is NO FAIR when someone
says anything about what we do, and we are too sissy to take it.

Attorney: No Fair, huh...hmmmmm...

Scottiekins: YEAH NO FAIR, THEM MEAN OLE HAMMIES!!! Only WE can call people child molesters and sodomizers of animals. NO FAIR...WAHHHHH WAHHHHH WAHHHHHH WAHHHHHH!!!!!

Attorney: Offers Scottiekins a hankie...

Scottiekins:<blubbering and snot running down his face> THEM MEAN OLE HAMMIES DO TO ME WHAT I DO TO THEM!!!!!! WAHHHHHHHH WAHHHHHHHH WAAAAAAAHH!!!!!!!

Judge: Scottiekins, order please!

Attorney: And you say that it isn't fair for the "mean 'ole hammies" to say
anything back, that they should just take it if you post disgusting things and
call them anything you want?

Scottiekins:<more subdued now, but still whimpering> That's right, NO FAIR!!

Attorney: And you admit that you posted about your illegal operations, in e-
groups and on Deja? That you bragged about it?

Scottiekins:<openly bawling now, realizing his defeat> YEAH BUT THE LAW IS WRONG!! WAHHHHHH WAHHHHHH WAHHHHHH WAHHHHHHH!!! And besides, other people do it...and besides...I WANT TO!!!! WAHHHH WAHHHHH WAHHHHH!!!

Judge: Case dismissed

POST VERDICT INTERVIEW WITH CNN:
Reporter: Mean Hammies, are you happy with the verdict?

Hammies: We already knew what was gonna happen. The delusional dorks are the ones who wondered.

Reporter: Keyclowns, how do you feel about the verdict?

Keyclowns: Well, we are gonna go get a buncha hamsters, furnace
tape 'em so they wont come apart, and have a big party together to
celebrate our
defeat at the hands of the mean 'ole hammies. Afterward, we will go
turn in our sparkomatics and our 1 pills to Riley.

Hammies: Just to show there are no hard feelings, keyclowns, look what
we brought you!

All Keyclowns at once: OOHHHHH HAMSTERS AND FURNACE TAPE!!!! THANK YOU
HAMMIES!!!<Keyclowns rush toward hammies to kiss and
fondle them>

Hammies: Keyclowns, chill out, we are heterosexual!

Reporter: This is Riley Hollingsworth, CNN News, Keyclown Land, USA.

I wonder if it would be possible to get the text of the arguments made for the successful creation of this license class back in 1951. Even though they would be 50 years old, I am sure there would be some relevant ideas.

This stuff must be archived in Washington, DC, somewhere. I would think it would have been put on microfilm a long time ago. Does the FCC have a library for this kind of thing?

horseshoestew,
There's a lack of hams on HF? We must be listening
to different HF bands! Most HF bands have more people
on them than there is room for.

Stewart,

The idea has already been tried. Back about 15 or 20 years the Dutch instituted a license class for beginners. It consisted of about 5 frequencies in the two meter band. Licenses required only a simple test. No code. It was hoped that these Novices would upgrade and become regular licensees. As for as I know none ever did. The service still exists, I believe.

If you want to have youngsters or oldsters learn about radio the best way is the old Novice license. % wpm code, a simple theory test, and a one or two year limit within which they HAVE to upgrade!

Didn't say that. Go back and read. Again - I said the percentage of hams using HF is down. I would guess that the number using HF has remained fairly constant. As you know, those that are using VHF/UHF communicate over shorter distances - it is these people who I am talking about. Every year they become a greater and greater percentage of the ham population. The problem is that less and less of all hams are ACTUALLY using VHF/UHF.

I originally posted to rec.radio.cb to support my argument that CB is
obviously NOT the proper environment to be starting our kids off in
radio - and you folks did not disappoint me, as the typical vulgarity
of your posts show.

Look, I don't have anything against you folks - I just don't think it
is appropriate for kids to be learning radio on the 11 meter band.

Ending slavery and racial segregation was a noble cause.

Conversely, there is NOTHING noble about stealing frequencies and
playing "king of the hill" with illegal amplifiers.

3430. Re: FCC proposal for new Amateur "Colt" License Class

Newsgroup: rec.radio.cb
Date: 2001-01-20 03:59:23 UTC
From: Keith McQueen <kb7m@arrl.net>
Message-ID: <t28a6.2182$E52.635055@news.uswest.net>
Source record: 69483
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.antenna,alt.radio.family,rec.radio.cb

For once a constructive suggestion! My 11 year old has asked me several times if I can find a ham radio technician text that is geared for young people. So far I haven't found anything. Anybody for getting something like this together? It doesn't need to talk down to the kids. Kids are bright and intelligent and can understand amazing things. But it HAS to be made interesting to THEM. If you could disguise it in a Nintendo game it would work even better. If it were available for download for a free or minimal cost so much the better. Now THAT would be a contribution!

3435. Dave and Debby: Gutless racist swine.

Newsgroup: rec.radio.cb
Date: 2001-01-20 04:11:20 UTC
From: "www.kp82.com" <kp82@my-deja.com>
Message-ID: <94b356pfj1@nnrp1.deja.com>
Source record: 69490

Hey assholes, answer the post. Or are you gutless shithunks?

This is a well reasoned response to your pork brained tripe, so why have you not answered it? Why? Because you are an inferior being who cannot comprehend the real "truth". You say God is gonna strike this or that person down, as if you have any knowledge of God. As if YOU are in any position to know what God may plan. LOL...you shitheads make me laugh...ANSWER THE POST BELOW, GUTLESS...

Just more race baiting from people who believe in black helicopters, that the Holacaust never happened, Janet Reno planned Waco, etc. Dave and Debbie exemplify the reasons that minority groups in this country dislike white people. I am ashamed to have the same color skin as such racists. Anyone who thinks you can accomplish anything in this country even remotely approaching a decent existence for everyone espousing that garbage is dead wrong.

Of course, it is likely that they do not care. They CLAIM to be Christian, they ACT like Satanists. I would be willing to bet they are "SOOOO nicey nice" around black folks. That is because they are hypocritical and cowardly examples of the blackest and most evil elements of human society, and live in fear of going head to head in this world with others of different backgrounds who may just not carry their own sickeningly limited mindsets.

Dave and Debbie are, in the words Reagan used to describe the people who blew up the US Marine barracks in Lebanon back in '83, "COWARDLY, SKULKING BARBARIANS"

Any person reading such tripe as what they post and giving credence to it is equally deluded.

If King had trysts that does not change a thing. His
ideas were those of great leaders before him, and damn few since. he originated nothing. What he did was to articulate injustice and force us to confront it. To deny that there was injustice <and still is> is to be even more "commie" than the commies. Afterall, the Russians are the ones who never speak about the millions killed by Stalin, etc. History books are rewritten there to purge or add the historical flavor or non-flavor of the month. This was done to control the populace through fear and doublespeak. That is exactly what Dave and Debbie are doing. Appealing to the base elements of human nature and ignoring the real contributions made by King. I know as do we all that it is wrong to commit adultery. So did King. That does not negate the message he carried unless you are too small minded to comprehend, or just want something to base your hatred for a bigger man with bigger ideas that

those you carry in your hate filled cranium.

I believe that Dave and Debbie KNOW they are full of it, but think, like the Russian communists did, that if they can blather long enough their version of history that it will become the perceived truth. Think again. Fantasies are fun sometimes...Your fantasies are a disgusting travesty of truth that only an evil element of humanity would embrace.

First of all, I'm NOT a SODOMITE, faggot! Second of all, what IS a "KeyClown" so I can figure out if I am one or not? Since you haven't heard me "KEY DOWN" how do you know I am a Clown? I think that YOU FAGGOTS will be in BIG trouble when Bush shuts the door to your closet! Backward thinking--does that mean "non-commie thinking" that obviously you don't? If you thought even 1/2 as much as I do, you would change your ways. But I guess it will take AN ACT of GOD to change some of you reprobates that disgust the most of us on this newsgroup. Dave

>
Dunno how "cool" it is but it was a poke at demonstrating why us Old Farts
come from fundamentally different "cultural" directions than do many of the
much younger hams of today. I mean like the whole point to RRAP is that it's
the current really whizzy outlet of convenience for the usual generational
warfare which probably goes back to when the first Species Homo Sapiens kid
told his father he wasn't gonna sleep up in the freaking family tree any
longer.
>

> > It's all changed and I have my doubts about how much "better off "

>
> The thing is, the percentage of hams using HF is way down too.

>
I guess so considering the big volume of hams today which don't have HF
privs which was not the case in earlier days. .
>
Fact is that there isn't any way to put the calipers on HF activity and band
utilization. If I had the time I could spend all day every day on HF and
barely even scratch the surface. Over the past half century four MF/MF ham
bands have come into broad use thus there is something of a dilution effect,
basically a 55% percent increase in the size of the playground. We got the
three WARC bands in '79 which accounts for three new bands plus 160 has
returned from the deep dark "200 Meters and Down" days into a very current
hot button.
>

> able to reach a critical mass of other people to communicate with on
> VHF/UHF, you really need more people.

>
What the heck is a "critical mass" in this context?
>
I won't comment on that one beyond the fact that VHF/UHF ops are not the
reason I've kept renewing my ticket.

It is MY opinion that the FCC doesn't worry too much about the
activity from 27.405 to 28.000. They do worry about bad eggs though.
Essentially those frequencies are "open" without the rubber stamp.
Use them respectfully and I'll bet you won't have any problems.
Be a JERK...then see what happens!

Again, this is OPINION only.

>I would just like to see the rest of 27 MHz opened up. 27.405 and up to
>28.000. Lessen some of the crowding anyway.

Your name says it "MORONZ" ! You will be judged severely by GOD
for your bearing of FALSE WITNESS of me unless you repent! How much
stronger can you say good things about me like that? When is the
TRUTH "Race Baiting?" Blowing up barracks? Real Americans don't do
that, but SICKOS like you falsely accuse the innocent of all your
problems! You need to go to cultbusters.com to learn about the people
that did that, which were NOT Christians! I suppose you say the same
thing of your Commie GOOD Buddy Jessy Jackson now "It's OK that he
committed adultery, it won't affect his WICKED communist good doings!"
By the way, I interviewed a BLACK HELICOPTER Pilot that I knew
personally a few years ago, to disspel that propaganda. Janet Reno was
the BUTCHER of Waco, wasn't she? I guess that she IS your mother, then!
Why don't you DEMAND to see those sealed up MLK files? And 6 million
were NOT killed--they went to NY ! I am GOOD to strangers in the land,
of which I am one. Black people have congratulated me for sticking up
for the TRUTH, not what you liberal WHiggers want; Less than a million
died there. The TRUTH IS double speak to LIARS like yourself!!!! Why
aren't you against National Socialism in this country? What is your SS
#, commrad? HEIL Clintonistas!!!!!!
Dave!!!!!!!!!!!!!

3452. Re: msce certification.....

Newsgroup: rec.radio.cb
Date: 2001-01-20 05:08:20 UTC
From: The Phoneman <phoneman01@hotmail.com>
Message-ID: <839a6.112$49.57944@news1.epix.net>
Source record: 69504

My suggestion would be to contact someone at one of your local
computer shops and ask if they know any MSCE's. Most who have
spent the bucks for the study materials would love to sell them for
pennies on the dollar. You may even try to contact the networking
group of your local telephone company ie. Bell, GTE, AT&T,
Sprint, whoever and see if they have any techs who will GIVE
you the materials you search for. Most of the techs at these
companies had the study materials GIVEN to them or bought
by the company for them, and they would part with them CHEAP
if not for the sake of clearing their bookshelf for FREE.
Just a side note....you may want to check in your area to see if
there is anyone looking for MCSE's and what they pay before
you put yourself through the aggrevation. It is not an easy certification
and would be a shame to go through if no jobs exist in your area.

My God! I've been missing out on all this for all these years. I was
into CB as a 16 year old aggitaing kid, but I forgot what fun I
had "back in the day".
Now I'm older and wiser and have lost the desire to piss everyone off -
just some of you now. But I can't wait to get my hands on a new RCI!
You guys make hobies fun, and so does the FCC!

You betchum. There was a huge outcry from the Old Farts of my youth about
the FCC and the ARRL having the unthinkable audacity to even suggest
letting pimply 5wpm weenies like me get on the HF ham bands until we did
13wpm solid copy with a pencil. In front of an FCC exaniner of course.
>
The Tech license also came out of that "restructuring" maneuver.

No. Regulatory agencies are not keepers of history. It's all in the ARRL
collection of QSTs now archived in CDs going to the 1915 issue one, volume
one, in particular cruise the Letters to The Editor columns for the
earlier iterations of rrap. Heh.

Is it going to be before EVERYONE realizes that the only reason the NO LIFE MAGGOTS are still here is because YOU keep responding to them! It has gone past the point of having a little fun with the new mouse (or mice)on the NG.
This place was far from perfect in the past,but It is really starting to take it's toll now.This unfortunately has been the master plan of these mentally stunted individuals from the first post.
It has been said before in many different ways and hasn't sunk in yet.
So lets try this;
If you reply to them any more will be YOUR FALT that they are here.

In the not to distant future this NG will be full of nothing but people that don't even have the common sense to come in out of the rain.And that is what these trolls want.So if you want to hand them the big win go ahead and continue to reply to them.There's nothing I can do about it,except to point out the obvious.

Sorry for the rant but it needed to be said.

:> If the load is not matched to the line, the length of line becomes
:> critical because of standing waves, in which case incorrect
:> transmission line length may affect power output. When the load is
:> matched to the line, the length of line is not critical. This is one
:> way to know something about s.w.r; add a section of line and, if the
:> tuning and power out change, you have it . . . standing waves."

This only states that you can tell if there are standing waves on the
line - nothing more. It does not state that the SWR is being changed.

:> V.J. Luciani, K2VJ
:>
:> It seems CLP has disappeared, and is unwilling to support his claims
:> that coax length doesn't matter. Too bad, since he had just obtained a
:> copy of my reference that he said I misquoted, and now we could have
:> had a nice, meaningful chat. So I guess the discussion about coax
:> length is now "terminated."

Of course line length can affect the amount of power transferred to the
coax from the transmitter. I don't think anyone has denied that.

What has been denied (and the article you quote does not imply otherwise)
is that coax length will have any effect on the VSWR.

But, this must be understood to be a system where there is no "leakage"
from the inside of the braid to the outside of the braid at the point
where it attaches to the antenna. If there is such leakage, then the
coax is no longer a pure transmission line. It is now also acting as
part of the antenna. In this case, the SWR certainly can be affected.
It would be impossible for it to be otherwise.

:> BTW, the article is very informative and easy to understand, even for
:> CLP. Recommended reading for anyone interested in getting the most
:> from their coax.

Make sure that you actually understand it, and do not read anything into
the article that is not there.

CLI Police <musthave@cli.com> wrote:

: Now, consider a true-to-life CB radio scenario. The transmitter
: has a 50 ohm output impedance and the transmission line has a
: characteristic impedance of 50 ohms. Even with a mismatched
: antenna, the length of the coax has no effect on the percentage
: of power transferred to the antenna (except for minor attenuation
: losses).

Not quite correct. It is certainly true, if there are no currents
on the outside of the coax - such as when a current balun is used
at the coax/antenna connection to block such currents.

But if there are currents on the outside of the coax due to leakage
from the inside of the coax - then the outside of the coax is now a
part of the antenna - and changing the length WILL change the VSWR
and the amount of power transferred to the antenna.

On the other hand, the usual claim is that 18 feet of coax is the
best length to use. In actuality, it is the worst length, since it
maximizes such undesireable currents on the outside of the coax shield.

I must apologize for being on the rag of late. It is time to confess.
I have just recently finalized my sex change and because of all the
chemical inbalances I have not been myself. I will promise to attempt
to keep my newly found hormones in control. I am presently available
for a meaningful relationship. If perhaps the Professor would respond
to my yearnings I might just be to busy to respond to this group for
a while, if you no what I mean. I will include my pic for your
enjoyment. Notice how my "after" pic has displayed all my
positive qualities. Some say I look a lot like Jennifer Lopez.
What do you think?

> http://www.deja.com/

Yeah, that would be a good starting point. I play with 4500's and
2600's. I really like the 2621's. I just installed one but 2 weeks
ago with a csu/dsu t1 serial interface in it. Thats another aspect you
need to get into, setting up frame relay. I have learned alot about
the way t1's talk to csu/dsu (lmi, dlci, and linecode). If you can
swing the cash for the csu/dsu t1 card, get it. Have a small 56k pipe
install at your house and just play. Best way to learn. I should take
a piture of the 12008 GSR we use at work. It would make you drewl,
packed with gbic's and fiber strung about like licorace. Another thing
to get if you can is the ios firewall package. It works on the old ip
access-groups, but its way cooler. Can do packet level inspection.
Anyway, good luck on your ventures!

Entry into ham radio today is for the middle aged to the retired, for
those who "always wanted to but never had the time or extra money, job
and family responsibilities kept me out", etc, etc. Kids have no clue
nor any interest.

In the eight years I worked as a VE we handled almost no kids, nor
anyone under age 30. There were a few females, but very darn few. Most
of the crowd were aged 35 and up, with the oldest at age 80.

My VE time ended over 7 years ago and I don't think it has done
anything but get worse since then. At that time we had no Internet
access in this rural region. The arrival of that passtime pretty well

cinched it.

How would I know what amount of RF radiation I am being exposed to? If my antenna is mounted on my balcony and the coax is far away from any other objects, would there still be a problem? Where would i get a filter, and how necessary is it?

Please tell me any safety pre-cautions i should take. I dont think I can put some sort of ground rod into the ground, im in an apartment.

Stewart,

The Netherlands implemented a license class very close to what you propose back about 1985 or so. A communicators license intended to bring the Citizens Band under control. About 5 frequencies were set aside in the two meter band for users. A ham license was granted with no code and only a simple theory test, about adequate to determine if the on light was on! People flocked to get in on the simple ham license. The government hoped if they were really interested they would upgrade, and if they weren't they could still take advantage of the thrill of communication and not bother the others. Holland requires evidence of a ham license before you can buy a ham radio,

The result? Almost no upgrades. Those who got into it stayed there. IS that what you want for our kids?

Not easy! Don't know how much freedom you have. Any trees/supports
nearby for a dipole setup? Or you can just drop 17 ft. of wire
straight down as an end-fed and tune for best SWR. Keep the CB close
to the window to avoid RF in the shack and the signal will get out.
I've used that configuration and it works quite well actually. Do this
at night and it's quite stealthy. You may be only working with ground
waves but it will work. Just remember to pull the thing in when done.

Yo' Bill! Hey man, no disrespect intended toward your posted information. Of course SWR does not change solely because of length. What I should have said to be more precise, was, "It appears there is never a definitive answer on the ng about length that everyone agrees on and puts the myths to rest once and for all". I have read your stuff, Bill. Very informative and to the point.

OOps , i thought you were on the ground level. If the balcony is steel modify a mobile antenna and bracket to attach to the railing , it would supply the ground plane. Radio Shack has the filters if you still need them . As far as the Maximum Permissible Exposure issue the DX Zone has a RF Safety Calculator that you can use to find out if your harming yourself or neighbors. Since your using less than 50wattsPEP you will be alright as long as you dont sit next to the antenna while transmitting with a Budweiser inyour hand . In other words keep the radio inside and preferably in a place where the antenna is not visible when your keying up.....Good-Luck.....

To the tune of "Beverly Hillbillies Theme"

Tell ya'll a story bout a guy named Dave
Kept a Cocker Spaniel to be his sex slave
He's a psycho freak...the right wing kind
Wanks off so damn much he's about blind

First thing ya know, Dave makes a stupid post
Slammin the commies, the blacks, and the left coast
No one with a choice would listen to his spews
So he posts with his 'puter, to the Deja-News

Idiot, that is...Pickin' boogers, Diddlin' dawgs...

Announcer: THE DAVERLY HILLBILLIES!

Music: Sound up, move into fast banjo breakdown

Making keyclowns cry is fun!

You idiot.
Why do you even bother answering this fruitcake? Anyone that would purloin an identity and spew the childish rants he does is obviously unbalanced and it is pointless to argue with his sorry butt. Don't fall for his childish attempts to inflame and disrupt.
I in no way agree with either your politics or your religious beliefs but you do often have on topic things to add to the discussion.
Forget about this nut job and go back to discussing radios and antennas.

>
> Again, this is OPINION only.

I get it. I don't operate outside the 40 channels allotted for CB. I don't have a problem with those that do. Not my concern or business. If the area between 27.405 and 28.000 is not used, and I don't have an allotment chart to see whose freq's they are, then what's the big deal giving them to CB? Must be that Amateurs feel that giving up *any* frequency blocks will create a precedent and open the floodgates to more.
Again, I don't care about the Out-Banders. If those freq's were allowed I'd use them. That's the point. If they are not being used then they should be re-allocated to the "service" that would gain, and that, to me, would be Citizen's Radio.

Just another example of the justice system in this country of ours, running rampant with no checks or balances to speak of. Talk about "Disappeared"! Central/South America has nothing on our justice system, although ours usually just goes in and kills everyone in sight, men, women and children, then makes up lies and half-truths to cover their asses from prosecution afterwards. Janet Reno will go down in history as one of the greatest murderers of citizens in this country, ever. FBI, BATF and the DEA... The Storm troopers of America!

You dumbfuck.

It has nothing to do with people involved in keydowns.

It is dealing with people selling illegal radios on auction sites.

Yet another attempted troll by someone with a 2nd grade reading
comprehension level.

Toll Free

Don't be paranoid! I didn't say you were hiding anything.
I didn't say it was wrong to have a business (lot's of people
have ham radio businesses). I just pointed out that I now have
a better insight into the reasons for your nonsensical proposal.
Doesn't make you a bad person.

73, de Hans, K0HB

PS: My old ARRL license manual has questions about capacitors and
inductors in the Novice section, so you weren't "right about the
point".

Midland makes a little three footer that works in a pinch. Sounds like it would be ideal for your situation. No ground required. Don't expect to be talking across the country on it. Also, the building will cause your transmit and receive ability to be highly directionally biased.

I really hope you don't think that PIX is secure.

It is about the biggest joke on the market, for firewalling technology.

If you would like a REAL firewall, take a look at Secure Computings
Sidewinder Security Server.

Much better, and to date, has not had ANY hacks developed and reproduced.

Actually, since the aluminum type antennas use a true ground plane, rather than a monopole type counterpoise, the fiberglass antennas do emit more of a near field radiation, causing overload, and emitting higher levels of harmonics (from the shit radios connected to them) than an equivelant setup with an aluminum ground plane antenna.

The flip side is that a fiberglass type antenna will usually put bigger S meter readings on the locals.

Hello Fred and Dino:

I will half to rule in favour of Dino since his opinion is more down to
earth, and has a better track record of being correct.

And because Fred's comments are highly biased without compromise,
validity, and sound logic, or a known track record.

Jay in the Great Mojave Desert, just down the road ah ways from the
fillin station.

No, I meant "dribble" that is what morons start to do when they talk excitedly. Go learn some more.
Opposition? Hardly; go play in the mall with your FRS radios and stop taking up space in this group with your nonsense. Cross posting can go both ways.

Considering that Amateur allocations begin at 28 we have no legitimate interest and generally no illegitimate interest below 28 or above 25. Ten meters is a treaty band so the FCC couldn't reallocate it if it wanted to. Why blame the Amateur Service for all your woes?

CB was originally slated to go to 27.995 so there are few remaining allocations in the range. It was held at 40 in Stage 2 because of some theory that receiver oscillators running 455 kHz above received freq would cause interference, the same theory BTW that killed TV Channel 1.
In keeping with the rest of the Larry, Moe, and Curly summer-intern manner in which CB was done, plus a lot of crappy operation on CB, the expansion was abandoned. It now is in the dustbin of history at FCC -- a 'posteriority' on which nothing is done so that priority issues will get handled.

On this newsgripe today is someone wanting a '400 channel' mod to his Realistic. OK, so he gets it done. Has anyone told him that anything above Channel 12 up two puts him in the ten meter band? Has anyone told him that Amateurs cannot legally communicate with an unlicensed pirate but can mash him at will (it not being legally possible to interfere with a pirate)? Or that he will stand out like a sore thumb on Ancient Modulation?

Strikes me that too many Golden Soldering Irons have been at work and not nearly enough Golden frequency charts.

Dick McCollum N&#65533;BK, Vice-President and Trainee, International Veeblefetzer Corp.

Toll Free,

Quit assuming. CD wants to learn Cisco tech, I just told him what he should learn. Who even brought up PIX? I didnt. I was talking about the IOS firewall feature set available for 2600's and up, but I guess you wouldnt know that now would you? Hmm.. And also, dont think that just because no one has gone public with kiddy script exploits for sidewinder that they dont exist. If you bought that product under the assumption that since it dosent have any holes (that you know about), its the best, I feel sorry for you (I already do at that). For speed purposes, thats the only chapter in my book sidewinder would win on, everything stinks about it. Heck, checkpoint fw1 blows sidewinder out of the water. It makes it look like old technology! And for that fact, I wouldnt even run CHECKPOINT! So bleh.

I'm absolutely convinced that the Internet is the worst thing that ever hit ham
radio. Beyond that I don't think for one minute that a "solution" is to introduce
Internet-like capabilities into ham radio, they're two entirely different animals
with the only commonality between the two being competition for what people chose
to do with their leisure time.
>
We should get a better picture of what's really up over the next few years as the
licensing stats stabilize.

well here is what i was thinking about doing. i have my ccna book and i am chewing on that now. i presently have 2 pentium computers, 1 pentium 2, and 1 pentium 3. i was thinking about building a dual pentium server just to practice with. what i wanted to do, is hook all these up in a lan configuration, and connect to the internet. two of them will have ms 95, the pentium 3 will have linux, and the server will have linux. i wanted to connect to the internet through a cisco router, so i can utilize it to configure my lan and learn the cli , etc. in your opinion, what is my best approach to get the most for my money, when i buy a router, under the circumstances i presently have and the goal i have in mind,.....cd is out........> Sent via Deja.com

1) We have "Black History Month", but no corresponding "White History Month."

2) Most universities and colleges have a "Black Student Union", but no corresponding "White Student Union."

3) Most universities and colleges also sponsor "Black Pride Week." Black students are given special t-shirts and encouraged to show their "black pride." If white students acted in a similar manner, they would likely be expelled for their actions.

5) In recent years, Martin Luther King, Jr. Day has been added to our calendars as a holiday. Meanwhile, Columbus Day has been de-emphasized or removed entirely. It's okay to honor a known womanizer and communist symphathizer, but not the man who discovered our country.

6) Why does the United States Postal Service issue a series of "Black Heritage" stamps, but no corresponding "White Heritage" stamps?

More to follow...

The information you had access to may have been stale, and never was
entirely accurate.
The class-D license did in fact give you 6 channels. You had to upgrade
within two years. THe upgrade requirement was later dropped.
After a short while the examination level was graded up quite considerably.
The license class was changed accordingly and now gives you a CW subband, an
SSB subband and an FM subband on 2 meters and on 70 centimeters.
The D-callsigns were assigned alphabetically, starting with pd0aab, then
aac, aad etc.
If you look in the callbook, you will notice that there are not many left
over. Many of the "old" names are now found under the A or C class entries
nowl
To recap: Dutch A-class is "everything" (hf, vhf and up, all modes) and
requires morse code and electronics theory. C-class is VHF and up, all
modes, requires same theory but no morse code. N-class replaces D-class (N
for Novice) and requires limited theory, gives acces to Novice subbands on
2m and 70cm.
No-code on HF has never existed in Holland, but we all know the rumours..
just have to see what happens now.

have a good one,

Rudolf

i vote we remove columbus day all together and replace it with "native people day" in memory of all the west indian people that were killed, enslaved, and tortured by columbus and his men .

OK, rather than a bunch of old geezers sitting around casting cold water on Stewarts idea, let's look at it from the view of the intended market.

Dick and Jane, 14 years old, have "had it" with the limitations of the FRS and now are "interested in experimenting with radios". They've heard of something called "ham radio" and are investigating the entry classes.

Jane says "Here's something called the Technician class. You have to take a simple 35-question test."

Dick says "Here's something called the Colt class. You have to take a simple 25-question test from the same pool."

Dick and Jane decide to investigate further, to see what difference the 10 additional simple questions make.

Dick says "Colt gives you six simplex voice/digital channels on 446, and another six simplex voice/digital channels on 223MHz. You can even build a simple little repeater between them, as long as input and output are not on the same band."

Jane says "Technician gives you 22,243 Megahertz of spectrum on 16 bands between 50MHz and 250GHz. Holy Cow, Dick, that's millions and millions of frequencies instead of just 12."

Dick says "With a Colt license you can transmit 5 watts of power. That's a lot better than FRS!"

Jane says "5 watts is for sissies. With Technician we can transmit 1,500 watts of power!"

Dick says "Yes, but the Colt radios are cheap."

Jane says "Sure, but there are lots and lots of used radios around for Technicians, even cheaper, and your Colt radio will be basicly useless if you upgrade."

Dick says "Hey, but I could put my Colt antenna 20 feet above the house if I want."

Jane says "Big deal, Technicians have no arbitrary height limit like that; they can go as high as zoning laws allow, and even higher with conditional use permits."

Dick says "The Colt license will be a lot of other kids just like me."

Jane says "I thought we were sick of kid stuff, and wanted to experiment. The Technician license lets us talk to kids and doctors and lawyers and indian chiefs and satelites and astronauts and W1RFI even."

Dick says "Colts can use both voice and digital modes."

Jane says "Hey, with only 10 more simple questions the Technicians are allowed all of that, and other neat stuff like SSTV, FSTV, telecommand, and space communications."

Dick says "Jane, you are right. This Colt thing is really lame. I always said you were smarter than me. I could just kiss you."

Jane says "Dick, only after you pass your Technician License test, and keep your clammy paws off my double bazooka antenna."

Neither Columbus, nor his men, killed, enslaved, or tortured
any American Indians. Where do you get this stuff, or do you
just make it up? Did you go to school in this country, and did
you pay attention in history class? Puke a buzzard....

Yup, and I certainly amn't upset either. I just get tired of the thread reappearing. Of course, you can used tuned sections of coax and change the impedance. Yes, one also wants to tune out the reactive component in the antenna itself (although it isn't absolutely necessary - one can use a matchbox at the radio). My recommendation is to use enough to reach the antenna and radio with a bit extra (you don't want strain on the connectors because you measured down to the 1/8 inch). The halfwave only means that the actual complex impedance at the antenna will be accurately measured (LESS ANY LOSS) at the radio end of things. I probably shouldn't have even bothered to post; I should have simply sat back and enjoyed.

Have a gooder!
Jim in Rochester, NY

Thanks you for the compliment.

We will never get complete agreement. Some people would have to get up
the ambition to do some simple testing themselves - to convince themselves
that what I have posted is correct. For others, even that will not be
enough. They have a "religious" belief, and no amount of evidence is going
to convince them that their belief is incomplete or wrong.

The need for all of this will go away once my group leaps into action. When we have eliminated all the "elitism" on the bands and issue every citizen an Extra class license, as is their God given right, all will be right with the world.

You mean other than the 'smallpox' epidemic that from the time of
Cortez killed over 25 million native people? Leaving an estimated 1
million. And that was just on the History channel. yuk yuk

I am looking to purchase a power supply.I am looking for 150- 200 amps.. Hopefully I can run across one that runs on 220v. I have a 220 line in my radio room, and already have a large mobile transistor box, that I would like to be able to run comfortable, on the base...Was planning on going with a Henry, but this idea with the mobile box sounded a little better ($$).....

Please let me know where I can find a good quality power supply (150-200A).. Thanks for the help.

It just proves that he is bored. He has too much time on his hands.

Is McDonald's or Burger King hiring? Maybe Wal-Mart or K-Mart?
How about a gas station? All you have to do is sit in a booth,
watch TV, push a few buttons and give out the restroom key.

"Compensation in regard to experience."

Dont forget the black caucus of politicians that stormed out of the
house when vice president Gore chaired the Electorial college.
Must be two separate Oath's of Office.

3576. Soundtracker Haters

Newsgroup: rec.radio.cb
Date: 2001-01-20 23:46:11 UTC
From: "l.winger" <l.winger@pro-ns.net>
Message-ID: <7rpa6.186$9q6.29813@newshog.newsread.com>
Source record: 69630

I noticed lately Cobra has gone back to the 'classic' without the Soundtrack feature. To make everyone happy 25 and 29 models without the Soundtrack feature. I own a 25 ST and I really like it. But just like every useless poll, half
the people like something and the other half don't. My only complaint is with
the 'Nightwatch' feature. The green lit face plate looks great at first but gets
annoying after awhile. I prefer the 'Nighthawk' with the green lit knobs. I got
into CB back in 1976 when I bought a Midland 23 13-862b with cystals.
I paid $60 I think at a grocery / department store. I still remember it was one per customer please. I had tons of fun with neighbor friends. My buddy next door had a Hy-Gain 23. We both had 108 whips on our cars and monitored channel 8. I would like to hear from others on any related subject, maybe all the newsgroup name calling will stop!

l.winger@pro-ns.net

3577. the state of CB these days

Newsgroup: rec.radio.cb
Date: 2001-01-20 23:52:42 UTC
From: arcweb@nospam.bnnorth.net
Message-ID: <3a6a1fc9.8084550@news.bright.net>
Source record: 69631

You know, I have been an avid CB enthusiast for years, I remember as a child talking on an Alaron 23 channel mobile radio hooked to a cheep power supply with a 4 ft fiberglass whip mounted to the desk in my bedroom. Then I bought my first 40 channel radio, and SBE 40 channel radio with sideband. I would talk on it with other cbers late into the night on weekends. I used to talk from my house on that radio to Coon Hollow Drive. thats along the river roughly 13 miles east of my parents place. I didn't have any amps, no fancy equiptment, just that mobile radio with power supply and 4 ft fiberglass whip mounted on my wooden desk in my bedroom . I talked to have fun, to meet people.

And look at how it is now. as a member of REACT which started all those years ago for emergency communications THROUGH CB. When we have an emercency situation here we can't respond, heck I can;t even talk to someone on the other side of town. And do you want to know why? because of everyone abusing the radio waves. there are people in my area that run 2 kw to talk 2 miles. now honestly isn;t that just a bit rediculous? I for one am in favor of doing away will illegal equiptment. What these new guys fail to realize. that with that power talking distance is no big deal. You want a REAL thrill? making an honest to goodness DX contact barefoot. THAT is real radio fun, I have contacted many people in many states AND countries completely by accident while running a plain radio w/o any mods.

It's a sad state these days, I'll still use CB now and then, but I am going to be getting my amateur radio license as well as my GMRS license to go to cleaner frequencies where people respect one another.

Flame me all you want. but I know the truth of the matter and so do those old timers that know what I am talking about and truly care.

since youve been around so long you must realize big amps is nothing new at all. it was more prevalent in the older days when sweep tube amps abounded and the tubes were dirt cheap. these days if you want power you have to buy something with some real tubes and spend a little money. youll also realize that its not the big amps causing these problems, its mother nature and the solar cycle doing it and in a few years all will be back quite again and then a few years after that all the noise will come back. the high noise would be there regardless of power levels.

I think CBs have been replaced now with these things, the internet.
I used to have a base CB and talked all night long on it and all that
good stuff. I hade a Midland 40 ch and a Sears (old) 23 ch in my car at
one time, I loved it! I had a Navaho in the house. I once talked to
Ohio, Mississippi, etc in my car once (with help from skip) but now all
ya need is a phone line and a webtv to talk anywhere in the world. Times
changin' huh?

In the interest of fairness, let's not forget that no one at the time had a good grasp of communicable diseases, and the deaths were not deliberate murders. This is not to diminish in any way the great suffering of a largely innocent people, of course.

These Cobra CB's these days are ALL JUNK because they are Made
in RED CHINA and they are made by communist sclaves that put ZERO
quality into what they are doing because there is NO incentive to work
in a commie system, since everyone makes the same $$ except the govt.
which gets the most. These lighted fronts on these new cobras are MADE

FOR TRUCK DRIVERS that aren't "Solar Drivers" so they can have something COOL to look @ at night instead of non-lit up CB faces. IF you want a GREAT equivalent, get a PC-68 with or without Weather (weather has lights). They have the Dynamic Squelch control that automatically sets your squelch, which is a LOT BETTER feature than Cobra's "SCAM Tracker" which does NOTHING. Technically it does NOTHING. It has been examined by the best brains out here (a few of the Local & Independant CB Shops that wold NEVER sell you a "modulation Kit (another SCAM)", and it IS a SCAM and a LIE from Cobra! This is the truth as I see it, a CB shop for 21 years, with info relied upon from some CB techs a lot better than myself! Dave!!!!!!!!

No, it is Father GOD's creation (the SKIP, or the Ionosphere, not
mother nature) and this guy's GOT a point. What he doesn't realize is
that THE PEOPLE in the country ARE different NOW (more brainwashed by
the TRASH on 52-890 mc, which is what they practice on CB. And imagine
a president like billy clinton in the old days--he WOULD OF been HUNG
for treason! CB has changed from all that fun to Channel 19 traffic
(Truckers and us 4 wheelers) and the LOCAL POTTY channel where all the
potty mouths congregate, and the young kids that they pervert. Maybe
you'll find people on SSB somewhere, that is good. NOW (WINTER) IS
Base station season. As a CB shop, I have seen just about ZERO
business going in this direction, as well a a BIG TIME decrease in 4
wheeler business. BIG TIME. One day we'll have a post on what we use
to listen to on da CB from the 60's through '80. It will make you
remember THE GOOD OLD DAYS !!!!!!!!!! Dave!!!!!!!!!

WHY would you want to RUIN a GOOD Bird 43 meter with a modulation kit
conversion reader? How did you put it in--did you solder a cap &
resistor to the meter terminals, or did you drill or burn into the
white end of the gold slug to connect da cap & resistor?
Dave!!!!!!!!!!!!!!!!!!!!

You mean his ADULTERY CHILD, not a LUV Child! Biblically, IF one
ever does such a thing, the Bible says that HE MUST STEP DOWN from
his "preaching" position. BUT since Jessy IS NOT NOR EVER WAS A
Christian (he IS A COMMUNIST) and there are OTHER MOTIVES for releasing
this info this week. Adultery is a violation of 1 of the BIG 10
(Commandments). Jesus says that IF you LOVE ME, KEEP MY Commandments!
Looks like Jessy IS not a BIBLE preacher!!!! Dave!!!!! 4-10!!!!!

3618. Racist SWINE Dave and Debbie...Gutless COWARDS!

Newsgroup: rec.radio.cb
Date: 2001-01-21 03:42:10 UTC
From: "www.kp82.com" <kp82@my-deja.com>
Message-ID: <94dlqhlli1@nnrp1.deja.com>
Source record: 69677

HEY BEVIS,
I have asked you to answer the words below. Of course you are too cowardly to do so. Just to make the point even clearer, I post the words below and ask you to challenge them AGAIN.
You are ignoring me because you KNOW I am right.

COME ON COWARD, ANSWER THESE WORDS

Just more race baiting from people who believe in black helicopters, that the Holacaust never happened, Janet Reno planned Waco, etc. Dave and Debbie exemplify the reasons that minority groups in this country dislike white people. I am ashamed to have the same color skin as such racists. Anyone who thinks you can accomplish anything in this country even remotely approaching a decent existence for everyone espousing that garbage is dead wrong.

Of course, it is likely that they do not care. They CLAIM to be Christian, they ACT like Satanists. I would be willing to bet they are "SOOOO nicey nice" around black folks. That is because they are hypocritical and cowardly examples of the blackest and most evil elements of human society, and live in fear of going head to head in this world with others of different backgrounds who may just not carry their own sickeningly limited mindsets.

Dave and Debbie are, in the words Reagan used to describe the people who blew up the US Marine barracks in Lebanon back in '83, "COWARDLY, SKULKING BARBARIANS"

Any person reading such tripe as what they post and giving credence to it is equally deluded.

If King had trysts that does not change a thing. His ideas were those of great leaders before him, and damn few since. he originated nothing. What he did was to articulate injustice and force us to confront it. To deny that there was injustice <and still is> is to be even more "commie" than the commies. Afterall, the Russians are the ones who never speak about the millions killed by Stalin, etc. History books are rewritten there to purge or add the historical flavor or non-flavor of the month. This was done to control the populace through fear and doublespeak. That is exactly what Dave and Debbie are doing. Appealing to the base elements of human nature and ignoring the real contributions made by King. I know as do we all that it is wrong to commit adultery. So did King. That does not negate the message he carried unless you are too small minded to comprehend, or just want something to base your hatred for a bigger man with bigger ideas that those you carry in your hate filled cranium.

I believe that Dave and Debbie KNOW they are full of it, but think, like the Russian communists did, that if they can blather long enough their version of history that it will become the perceived truth. Think again. Fantasies are fun sometimes...Your fantasies are a disgusting travesty of truth that only an evil element of humanity would embrace.

Computers like radios have gotten cheap enough that anyone can use them.
Just a sample of society which is getting lower and more ignorant everyday.

I answered this barer of FALSE WITNESS and LIES against US
yesterday in the Martin LUCIFER KING post. Do I have to go into detail
to show HOW WICKED you really are? Which religion calls people animals
(swine, cattle)? I believe it is the Rev. 2:9 & 3:9 people, which you
may be one. Why do you want to stirr up hate between me and my black
friends? Is it so they won't be looking @ YOU ? GOD WILL JUDGE unless
you REPENT (turn from) your WICKED WAYS !!!!! We don't believe
ANYTHING the MEDIA says on anyone. Jesus said BEWARE when the world
says great things about you (MLK & Jessy BOTH ADULTERERS)!!!!!!
Dave

3628. Re: the state of CB these days

Newsgroup: rec.radio.cb
Date: 2001-01-21 04:01:40 UTC
From: City_Slicker <notenuftime@foolscorner.net>
Message-ID: <94dmv4$618@dispatch.concentric.net>
Source record: 69681

Well these are not the days of old. I agree that 2 KW to talk across town is ridiculous. But I don't believe that is the problem. There are just many more radios being used. Look at how many more trucks are on the road and they aren't all running amps! Then you have south America, central America and Mexico who use CB radios like telephones in their towns. Then lets roll all the neon, overhead power lines and thousands of other electrical noises that interfere with radio. The solution stick an amp on that CB so you can get over the noise. 4 watts doesn't cut it. If you want to drive around Chicago with me some day and listen to 4 watters trying to get over the noise you'll appreciate my point. Chicago is no different than most other large cities. My guess is that if radios could run at 50-100 watts the want for amps would decrease dramatically. My radio peaks at 55 and talks as far as I am interested. I do blow the dust off the 667 once in awhile just to keep the cross posters on their toes.

"More to follow" ?

May I step out on a very short limb and speak for the
rest of the news group... NO !

Sure wish the NNTP server I use would down load more
useful header information so I could just block the
entire Deja domain period.

Why don't you go post your crap to a political news
group?

You won't do that because you are a coward.

If you posted your crap to an appropriate group
people would be interested and respond to your
posts and you would then have to defend them.

Then you would have to think. God forbid that.

<Plonk>

Goodnight people. I am pulling the plug on the CB NG.
Looking for a moderated forum.

Best wishes to those who were so kind to help me out over
the years.

3636. Scottiekins the sissy sues N8: TRANSCRIPT HERE!

Newsgroup: rec.radio.cb
Date: 2001-01-21 05:10:59 UTC
From: "www.kp82.com" <kp82@my-deja.com>
Message-ID: <94dr10pkg1@nnrp1.deja.com>
Source record: 69692

Attorney: So, Scottiekins, you and a group of people who are involved in a
conspiracy to violate federal law are suing a legal ham operator for
complaining about your conduct, is that correct?

Scottiekins: Yes sir, we can't take it anymore. It is NO FAIR when someone
says anything about what we do, and we are too sissy to take it.

Attorney: No Fair, huh...hmmmmm...

Scottiekins: YEAH NO FAIR, THEM MEAN OLE HAMMIES!!! Only WE can
call people child molesters and sodomizers of animals. NO
FAIR...WAHHHHH WAHHHHH WAHHHHHH WAHHHHHH!!!!!

Attorney: Offers Scottiekins a hankie...

Scottiekins:<blubbering and snot running down his face> THEM MEAN OLE
HAMMIES DO TO ME WHAT I DO TO THEM!!!!!! WAHHHHHHHH
WAHHHHHHHH WAAAAAAAHH!!!!!!!

Judge: Scottiekins, order please!

Attorney: And you say that it isn't fair for the "mean 'ole hammies" to say
anything back, that they should just take it if you post disgusting things and
call them anything you want?

Scottiekins:<more subdued now, but still whimpering> That's right, NO
FAIR!!

Attorney: And you admit that you posted about your illegal operations, in e-
groups and on Deja? That you bragged about it?

Scottiekins:<openly bawling now, realizing his defeat> YEAH BUT THE LAW
IS WRONG!! WAHHHHHH WAHHHHHH WAHHHHHH
WAHHHHHHH!!! And besides, other people do it...and besides...I WANT
TO!!!! WAHHHH WAHHHHH WAHHHHH!!!

Judge: Case dismissed

POST VERDICT INTERVIEW WITH CNN:
Reporter: Mean Hammies, are you happy with the verdict?

Hammies: We already knew what was gonna happen. The delusional dorks
are the ones who wondered.

Reporter: Keyclowns, how do you feel about the verdict?

Keyclowns: Well, we are gonna go get a buncha hamsters, furnace
tape 'em so they wont come apart, and have a big party together to
celebrate our
defeat at the hands of the mean 'ole hammies. Afterward, we will go
turn in our sparkomatics and our 1 pills to Riley.

Hammies: Just to show there are no hard feelings, keyclowns, look what
we brought you!

All Keyclowns at once: OOHHHHH HAMSTERS AND FURNACE TAPE!!!! THANK YOU
HAMMIES!!!<Keyclowns rush toward hammies to kiss and
fondle them>

Hammies: Keyclowns, chill out, we are heterosexual!

Reporter: This is Riley Hollingsworth, CNN News, Keyclown Land, USA.

Hey Fruitloops, Why dont you answer the question?
The question is not how many affairs MLK had. The question is, you ANAL WART, was not the confrontation of injustices, institutionally entrenched in many parts of this country, worth the price of the man who forced us to confront the situstion having affairs? I say that that is between him and God, and you, me, or anyone else has a right to condemn.
Having said that, I also say that your condemnation of MLK is just a slimily self righteous attempt to smear him. You do it not on religious conviction, but because you are a bigot. Smearing him in the traditional, Jim Crow methods does not work anymore because many of you social mutants have thankfully died. 2001 America is worse than 1951 aAmerica in a lot of ways, but as long as you sneakin' slimy' lying turd bags are croaking off, there is one redeeming characteristic of this country.

Your words, in your attempt to smear someone on grounds of violation of the 10 caommandments, are nothing more than taking God's word and name in vain to advance the cause of people who hate.
You have to hide behind God to smear MLK, because you know that YOU have no right to.

Now shut the hell up and crawl back under your rock.

Why should this country commemorate what happens to people
in other countries? It would seem that a country should
commemorate things that deal with ~that~ country. Should we
commemorate the 'Boxer Rebellion', for example? I can see
where we'd have a >bunch< of new holidays!
'Doc
PS - Who did the West Indians displace when they came there?

Right there, right back.

Since it was wrecked, I don't have the alternator bracket on it, and run a single leece-neville.

However, I do take it for a spin every couple weeks, just to keep the chassis lubed, etc.

You where soundin some kinda good, in my suburban, no doubt.

> Toll Free,
>
> Quit assuming. CD wants to learn Cisco tech, I just told him what he
> should learn.

It sounded to me like the thread originated around MCSE questions. Hrm.

>Who even brought up PIX? I didnt.

I believe that was me, in my last post.

I was talking about
> the IOS firewall feature set available for 2600's and up, but I guess
> you wouldnt know that now would you? Hmm..

Nah.

MCSE / CNX / CCIE

They don't teach us shit.

I manage a 3Xds3 network (fed by a single OC-3, but split for redundancy in
the MUX) and a 121 T1 frame network.

Toll don't know shit.

And also, dont think that
> just because no one has gone public with kiddy script exploits for
> sidewinder that they dont exist.

Well, since there have to date been no kiddie scripts posted, and I myself
(I don't even pretend
to be the "hacker extraordinairre", however, I did start with this stuff
years ago, grew up in the
area where most security measures where standardized / invented /
whathaveyou, and do this
professionaly... And my customers have been completely happy to date.)
haven't found a way inside
a properly configured Sidewinder server, I am standing by my claim.

There have been no exploits posted, because there aren't any to date.
However, I find your attitude about
it, as well as you lumping it in with that shit Checkpoint peddles more than
mildly amusing.

If you bought that product under the
> assumption that since it dosent have any holes (that you know about),
> its the best, I feel sorry for you (I already do at that).

No, actually, I bought the product because out of PIX, FW-1 and quite a few
others, this
was the one that I COULDN'T get past. And the only one.

Experience counts.

For speed
> purposes, thats the only chapter in my book sidewinder would win on,
> everything stinks about it.

Then you don't know what your doing. Sidewinder rocks.

Heck, checkpoint fw1 blows sidewinder out
> of the water. It makes it look like old technology!

Why?

What about Checkpoint blows it out of the water? Please qualify your
statements, or we will be
forced to believe that they are crap.

And as far as making it look like old technology, sorry. Just because it
don't run on NT, and has
no real GUI doesn't make it old technology.

My AS/400s would really throw you for a loop... Or how about the system
3XX's we have in Iowa ?

And for that
> fact, I wouldnt even run CHECKPOINT! So bleh.

I don't know any decent security officer that would.

Depending on the link, either a 17XX series or a 26XX series.

Take a look at what you want to do, and a look at the featureset, and go
from there.

Then, also take a look at routersim, and drop the routing / firewalling to
your linux server.

Just remember, when configuring SAMBA, you will be introducing more than a
few holes to the
system it is running on, as well as to the internal network. A lot of the
MS Security (yeah, a contradiction
in terms) is lost when making everything talk to the SAMBA enabled server.

How about a "black mayor's conference" that is held every year. Try holding a "white mayor's conference" and listen to all the reverend Jackson's scream. There is a "miss black america" beauty contest, try holding a "miss white america" beauty contest and listen to the shouts of racism.

So, what you are saying is that anyone who criticizes the action of a black
is racist? Is this true no matter how abhorrent the transgression?

You are taking a rather narrow view when you think that he reports only to
God. Jesus said "first render un to Caesar those things that are Caesar's.",
he meant you need to obey the laws of the land. Your hero did not do so, had
he not had the good fortune to be shot, one suspects his later peccadilloes
would have made moot anything he had done before.

Wow, I am so proud of you. Bragging gets you far in life. And I bet
you manage this all from your big bad Windows 2000 machine huh? I bet
you even have BitchX for Windows huh? Hah.

> haven't found a way inside
> a properly configured Sidewinder server

By which methods? Sidewinders are just like the rest, they perform
stateful and stateless inspection. Any properly configured firewall
will work, minus the OS and everything below it which may be the front
door. Sh*t, even my solaris machines running ipf will provide the
security your "sidewinder" does. Maybe you need to test your kiddy
scripts with properly configured firewalls? rootshell wont help you
here, try again.

> others, this
> was the one that I COULDN'T get past. And the only one.

Prove it, more crap claims (in your own words).

> Then you don't know what your doing. Sidewinder rocks.

Assuming once more, just as you assume your facts.

> What about Checkpoint blows it out of the water? Please qualify your
> statements, or we will be
> forced to believe that they are crap.

Lets see what kind of restrictions sidewinder can look for:

-protocol type, destination address, user, origin address, port number,
time of day, max connections

Lets see what kind checkpoint can look for:

-protocol type, destination address, user, origin address, port number, time of day, file types and names, unsafe content: viruses and malicious Java/Active X content

Wow, I guess Toll Free dont care if his users hdd's get eaten by malicious active x kiddy scripts.. Oh wait, I bet Toll Free writes kiddy scripts to destroy peoples hdd's, thats prolly why!

Now lets see what kind of VPN support we get.

With sidewinder we support:

-data encryption, user authentication, x.509 digital certificates

With Checkpoint we support:

-data encryption, user authentication, public key infrastructures, hardware based VPN acceleration

Toll Free must be a 509 cert pedophile. Sorry, but so far checkpoint has your sidewinder crap smoked. =o)

What kind of supported VPN protocols do we have?

With sidewinder we have:

-manual IPSec, IPSec w/IKE

With checkpoint we have:

-manual IPSec, proprietary, IPSec w/IKE

Yet we win again.

Now lets say we run a http proxy, what kind of methods may we deny sites?

With sidewinder:

-denying categories of URLs

With checkpoint:

-denying specific destination URLs, defining a list of acceptable URLs, restrict web site access based on URL subscription lists

Man, checkpoint really sucks, but so far it makes your sidewinder look like cave man technology.

What about denial of the actual web content, what can we do there?

With sidewinder we can look into:

-Java

With checkpoint we can look into:

-Java, ActiveX, Java script, Java archives, compressed Java

Toll Free, I think your a complete moron at this point.

How many current connections can we have per firewall? Gotta love those connection tables!

With sidewinder we can have:

-2,000 to 10,000 (OUCH!)

With checkpoint we can have:

-greater than 10,000

Toll Free, you are a complete moron.

> And as far as making it look like old technology, sorry. Just because it
> don't run on NT, and has
> no real GUI doesn't make it old technology.

Yuk, get off the NT guy. I will take solaris or any bsd flavour over NT 24x7. Heck, for that, I would run redhat linux over NT. Yuk, you brought up NT! *shakes off the dust*

> My AS/400s would really throw you for a loop... Or how about the system
> 3XX's we have in Iowa ?

Your bragging about terminal servers? Well sh*t, let me jump on the band wagon and brag about my zyplexes. More brainless bragging about crap to impress the lambs which you will never lead. Yet try again.

> I don't know any decent security officer that would.

Only one smarter than yourself.

Toll Free, you now look like the moron you claim to be. I will not post to you again, I have wasted enough time but found it [proper] being you challenged the obvious. Next time, do your reading before you post. Your just too eleet for me guy! Good bye.

Yours truely. Heh.

Nah. It was from someone on this group. I don't know who, exactly, 'cause I didn't open it to read the header information, etc. It had nebo dweebo in the subject line, or something to that effect. I blasted that dude, "Dougie" a couple of times the last few days so it's probably from him. Pussy ass bastard, if you ask me.

3658. Re: Coax Question

Newsgroup: rec.radio.cb
Date: 2001-01-21 12:25:42 UTC
From: Mad Dog <lgssl@netzero.net>
Message-ID: <94ekjl$da8i7$1@ID-20128.news.dfncis.de>
Source record: 69812

All coax has resistance in it , show me a electrical conductor that does not have a specific resistance, thats what i thought . If the length of the coax did not matter then i guess it would be ok to run a 1ft. jumper between a radio and a linear amplifier , DONT DO IT, the RF feedback from such a short jumper would cause the amp to latch on and not unkey itself . Sparky , Fred Hambrecht and Doc i applaud you for your knbowledge. Research and personal experience are far superior . Using a minimum of 18ft. of coax allows standing waves to stabilize in a matter of speaking between the antenna and the last component in your station . The 1/2wave formula that we discuss is based on a frequency of 27.185Mhz which takes roughly 36ft. to complete its cycle . 18ft. being the 1/2wave point allows the a/c sinewave to complete at least half of its cycle . With no regard for STUBS changing the length of the coax will not change the SWR of the antenna but it will change the way the SWR meter reads the SWR . All standing waves return to the radio but some are hidden and not able to be read by the meter. Using odd multiples of the Electrical 1/2wave length between the meter and antenna will allow a true measurement of SWR to be made . This is the formula for Electrical 1/2wave: 492 x Velocity Factor / Frequency . And here is the formula for creating a STUB or 1/4wave Transmission Line Transformer: 246 x Velocity Factor / Frequency . Downward sloping ground radials are used to raise the Impedance of a 1/4wave ground plane antenna from 35ohms - 50ohms . Which brings me to this question , does a Antron99 have a 50ohm Impedance if the ground radials are not used ???? Good question huh!!! And yes i know that a A99 is a 1/2wave vertical and has a impedance matching network built into it. Damn i wish i had a noise bridge.

Sorry, but that is wrong. The majority of blacks in this country today are not descendants of American slaves, but are descendants of blacks who entered this country after slavery was abolished. In fact, a huge percentage of the black population entered this country within the last thirty years, attracted by this country's pro-black government policies.

Check it out for yourself if you don't believe me (and you won't believe me, so do check it out on your own).

Well, close enough.

Rule No. 1 -- Throw away your SWR meter and find or build a field
strength meter, impedance bridge and signal generator. All are very
cheap to buy or build. If you need links let me know.

Rule No. 2 -- Forget coax length and match that antenna.

Rule No. 3 -- Buy a good book on antennas (ARRL or better).

Andrew

Any installation where this could not be done has bigger problems than coax length. There is a big difference between resistance and impedence at rf BTW. Spurn theory if you like but be prepared to look like the Wizard of Id.

Dick

3665. U know your Linears ah Hummin when

Newsgroup: rec.radio.cb
Date: 2001-01-21 13:34:57 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3A6AE581.37C5C6ED@qnet.com>
Source record: 69844

U know your Linears ah hummin when:

1- Your head lights dim as you modulate on the radio.

2- The Alternator Belt slips during keyin down time.

3- Garage Doors open up, and car alarms go off as you drive by.

4- You feel a nice glow of warmth coming from under the dash, when the heater ain't ah on.

5- Superman stays away from your antenna.

6- You leave a trail of dead Pigeons, and sparrows behind your 64 Buick.

7- Welfare Claire calls ya up on the phone fer goin out

8- That lowered Chevy with the loud thumpdey thump music has a self districting squeal feedback, with your audio in it. And tell your girl friend your also a broadcast engineer. And she believes it.

9- After shootin skip all day, CNN says that the global warming is getting worst.

10- Your antenna catches fire, but take a picture of it for your QSL cards.

11- The guy at "Auto Parts R Us" knows off the top of his head what the part number for your alternator belts is.

12- The boys at "Big Linear Parts is Us" knows when you call you want 16 each matched 2SC2789 transistors, a few 10 ohm resistors, and they will half to wait intil you get your Welfare check.

13- U keep a known set of tools so that you can tighten up all thirteen Alternator Belts on the Freeway in less than a few minuets.

14- U got Arc Over Burt marks on the top of your 1964 Buick.

15- As you is ah drivin by the "Guns & Ammo and all other essential stuff store" when it closed, you can light up most of all the florescent lights.

16- When it's really tuned up good, you can make the sprinklers come on over at city hall, even when all the water turns to ice in a few minuets.

17- U know what it costs for 7/8 inch hardline coax and connectors.

18- The cars radio tuned to a FM Country station starts to yodel.

19- Rockin Robyn from the Southern Rose State comes back 2 ya, and says:
"Boy whats you running there?"

20- The top of the car where the antenna is mounted, gets warm.

Jay in the Mojave

Hey Richard whats happening man, i dont believe weve had the pleasure before but its nice to meet you, anyway i dont believe i said that resistance and impedance were the the same even though they are both measured in ohms and they both coexist in a given length of coax. Impedance is determined by measuring the inside diameter of the shield versus the outside diameter of the conductor. Whereas the specific resistance would affect the signal by attennuating it by a certain amount of db on a given frequency at a 100ft. length where these measurements are usually taken. Thanx for the reply....Youre right i can see the flames coming over the trees from the people that will undoubtedly take my information out of context....

Actually, you idiot, you do neither.

You add a Op-amp controlled peak detect and hold circuit.

Shut the fuck up Dave, your senseless ramblings are starting to get old.

And for AM and SSB measurements, even a moron like you should know, it takes
a PEP meter to correctly measure your total power delivered to the load.

What an asshole.

No, actually from a BSDI box at work.

So your saying that Wingate, properly configured, is just as secure as
anything else?

Looser.

Sh*t, even my solaris machines running ipf will provide the
> security your "sidewinder" does. Maybe you need to test your kiddy
> scripts with properly configured firewalls? rootshell wont help you
> here, try again.

Again, moron, nobody said I run kiddie scripts.

Oh wait. You did. The same guy who has never seen / met / worked with me.

>
> > others, this

I have.

How would you like me to prove it to you?

Set up another firewall and let you with j00r s00pah 31337 sk1llz try and
get past it?

>
> > Then you don't know what your doing. Sidewinder rocks.
>
> Assuming once more, just as you assume your facts.

No, not assuming. After having looked at most of the products on the
market, testing,
and running them for quite some time.

You obviously haven't dealt with Sidewinder since it incorporated all of the
SecureZone technology into it.

>
> Lets see what kind checkpoint can look for:

> kiddy scripts to destroy peoples hdd's, thats prolly why!

No, actually, I use a proxy server for proxying all my HTTP, HTTPS, FTP,
etc. requests.

I believe in letting my firewall be my firewall, and offloading everything
else to a server designed
to run that.

Too many holes can be introduced to any system with the more modules you
open up on it.

Even MCSEs can figure that out.

>
> Now lets see what kind of VPN support we get.

And the latest ver of sidewinder supports the same.

Again, your speaking of something you JUST proved, you know nothing about.

>
> Toll Free must be a 509 cert pedophile. Sorry, but so far checkpoint
> has your sidewinder crap smoked. =o)

Where? So far, all you have done is spout off about an old release.

>

>
> With sidewinder we have:
>
> -manual IPSec, IPSec w/IKE
>
> With checkpoint we have:
>
> -manual IPSec, proprietary, IPSec w/IKE

And their proprietary encryption has been hacked.

Secure, huh?

>
> Yet we win again.
>

Only if you like to run a hacked piece of software on your border.

lol

> Now lets say we run a http proxy, what kind of methods may we deny
> sites?

Yes, I would put my proxy server on the inside of the network, not load my
firewall
with the burden of HTTP proxy...

Most decent sysadmins would do the same.

Your firewall is for security.

Your proxy server is for authentication, etc.

>
> With sidewinder:
>

> -denying categories of URLs
>
> With checkpoint:
>
> -denying specific destination URLs, defining a list of acceptable URLs,
> restrict web site access based on URL subscription lists

Again, this idiot (the E-minor) hasn't used the latest ver of sidewinder, or he would know
that it supports the same thing as he is spewing about his beloved checkpoint.

>
> Man, checkpoint really sucks, but so far it makes your sidewinder look
> like cave man technology.

No, so far you have proven that your total product knowledge is pitiful, and that you REALLY
don't know about the different technologies on the market.

>
> What about denial of the actual web content, what can we do there?
>
> With sidewinder we can look into:
>
> -Java
>
> With checkpoint we can look into:
>
> -Java, ActiveX, Java script, Java archives, compressed Java

Blah blah blah.

Same old story. Has been incorporated into latest rev (which, BTW, has been available for 6 months almost)

>
> Toll Free, I think your a complete moron at this point.

And anyone serious into security has realized this since you posted you liked checkpoint over SW.

>
> How many current connections can we have per firewall? Gotta love those
> connection tables!
>
> With sidewinder we can have:
>
> -2,000 to 10,000 (OUCH!)

Same-o same-o

>
> With checkpoint we can have:

>
> -greater than 10,000

And I have proven that you can lock up the checkpoint box by just sending
massive amounts
of DNS requests to the checkpoint box.

So, the IP table with checkpoint really doesn't work, if you just send badly
formed packets to the
box.

Thats about as secure as you can get though, huh... Firewall completely
hung up.

>
>
> Toll Free, you are a complete moron.

Ahh yes, but I can do more than spout off about things I haven't actually
experienced.

>
> > And as far as making it look like old technology, sorry. Just
> because it

> Yuk, get off the NT guy. I will take solaris or any bsd flavour over
> NT 24x7. Heck, for that, I would run redhat linux over NT. Yuk, you
> brought up NT! *shakes off the dust*

No, asshole, the original thread started out with microsoft products.

If you are going to start bashing something, then don't expect it to be
brought up later.

>
>
> > My AS/400s would really throw you for a loop... Or how about the

> crap to impress the lambs which you will never lead. Yet try again.

> > I don't know any decent security officer that would.
>
> Only one smarter than yourself.

LOL.

Yes, most security admins I know would rather put up something that has been
nearly completely

hacked, rather than something that hasn't had a single exploit found for it yet, huh?

The simple fact of the matter is this. You like what you believe checkpoint will do.. You don't
care about the security it doesn't offer.

You want your firewall to do everything for you. Any decent admin would die if he saw HTTP requests
being processed by the firewall. You want a proxy, put up a flippin proxy server.

Your firewall is there for one reason, and one reason only. Prevent intruders from gaining physical access
to the network.

Anything else you want done, you put up a decent box.

And as far as that goes, the latest rev of sidewinder actually incorporated SQUID for those that want their
firewall to run HTTP proxy. Now I suppose you will argue that the proven best caching proxy is worthless,
and that checkpoint has something better, right?

>
> Toll Free, you now look like the moron you claim to be. I will not
> post to you again,

Thank god. Your filled with misinformation and know little about what you talk about, other than being
able to spew from some marketing skids handed out to you a while ago.

I have wasted enough time but found it [proper]
> being you challenged the obvious.

Yes, I challenged you about telling someone to run pieces of shit. And I guess you really showed me where
my place was, huh? Right above you.

Next time, do your reading before
> you post. Your just too eleet for me guy! Good bye.

Blah blah blah.

When you can come off the porch, write the scripts, understand the IP, and compete with the big boys, we will
welcome you. Until then, get off the marketing hype, and learn from your mistakes (like this entire post).

I betcha you write back again. Proving that you are a liar, as well as a fraud.

a..
a..
a.. Christ really was a fisherman. I mean, lot's of people bought it hook
line and sinker.
a.. Blasphemy is a victimless crime.
a.. God created man in his own image. Low self esteem or what?
a.. LET Jesus be YOUR anchor! So when Satan rocks your boat, THROW Jesus
overboard!
a.. Jesus died for your sins. Make it worth his time

a..

Aluminum doesn't work for a ground plane??? Are you crazy! It works just fine. The only problem will be the fact that aluminum is non-magnetic. You will have to have a permanent mount...

Source record: 69834

Greetings!

Never really cared for the ST feature, although the compressor side during TX really did help a typical stock mike perform admirably against a power mike on a non-ST. A stock mike properly driven by "tuning" the input level of the ST when it toggled on, really sounded quite good, but muffles/muddies up when it gets driven too hard.

Never cared to "tune" the radio to make the audio sound good, it should sound good right out of the box. ST's, well, they produced sound, but whether you liked it or not is open for interpretation.

Just the "wide dynamic range" of a received signal on an ST unit hurt the "expansion" feature when dealing with heavily modulated radios. If a carrier swung at all in either direction, it "wah-wahhed" the audio to the peaks and valleys of the audio from the station - annoying as <exp> to tolerate.

It also hurt to see a ST unit $20 to $30 more in stores, then Cobra seemed to change their minds and have settled the price down and some ST units of the comparable model are *cheaper*.

The Cherokee NightRider model, AM-only NR100. It's a nice unit, but you might want to put a wire screen on the front panel. Especially if you travel a lot at night and leave your windows open. It likes to collect bugs - they're attracted to the "blue light" the panel gives off.

But the NR 100 gives you SELECTABLE Clear Drive, for TX or RX/TX. Like the ST, only you can use the "compression" feature when using any mike during transmit and no "wah-wahh" you'd get during receive on ST models. Kinda nice and they do sound beautiful when the proper audio mods are done.

Cobra has taken a real beating on the market lately. It's from people that choose what they want to use, and the ST fell off the tracks. People buy radios they can use and like what they hear, not muffled audio or "hOW Sit GoInG ParDEner? yoU O-Kay baCK There?" or changes their audio to a point that people have to ask, "Who are you?" all the time - including your friends...[sigh]

The ST went into the cheaper radios, and it shows. They don't last long, never durable, and people "dump" them to favor the models that use discrete and avoid the SMD technology-heavy types. At least you don't find parts and chips rattling around in the case and you have to look for the place the loose parts should go in.

IF you don't believe me, check out the Garage sales and the
local CB shops "Used equipment" section. People may like ST
at first, but hate it later, and it shows.

One of the radios I've always enjoyed using, is the Pro-640e with the
LED-green knob outline illumination. Lots of good memories...

The newer PC-xxLT models have the green, but lacks the "subtle"
shading and can be quite harsh and glare from the color and it's
brightness makes it hard to see which settings the knobs are at.
Uniden had one failing and that is to use a high-contrast switch throw
outline that is of an opaque plastic. It would have helped immensely
if they had used the lighting with a translucent throw - you could at
least see what position the knob and switches are set to.

On Sat, 20 Jan 2001 23:46:11 GMT, while the modem was ice fishing with
the Mouse, "l.winger" <l.winger@pro-ns.net> dissertated the following:

I totally agree. Don't take the negative feedback here as what the
general ham population, or the FCC really wants. Remember - most of
these folks were against lowering the CW requirements. They are still
in the "block all change' mode.

I personally agree with holding on to the traditions. Instead of lowering the requirements to make it easier to get in, we should be making better study materials to make it easier to learn. No sense dumbing down. I'd love to write something like this myself, but just don't feel like I could doa good enough job on it to do itthe justice that it deserves.

>Amplifiers specified for use on the 11 Meter band
>Amplifiers designed for use in frequencies 24 MHz to 35MHz

Hmmm... guess that means that 10 meter amplifiers are out. Too bad.
The FCC allows certification of amplifiers in this frequency range as
long as the amplifier requires input of 50 watts or more...

>Amplifiers posted within the CB category
>CB Radios that are amplified to exceed 4 Watts using the AM Settings or 12
>Watts using the SSB settings

They should also prohibit the selling of CB radios that have been
modified to transmit on any frequency other than the 40 channels as
specified by part 95 of the FCC regulations... But that's just my
$.02

The Kill file is growing everyday. My screen almost looks like it did a year ago. Once I get all the Ham crusaders blocked. If they continue the cross posting life could get pretty miserable.

Now if we could get Dennis, Sean,Bill and some of the others here on a regular basis we might all really learn something.

Not "block all change", Stewart. Almost everyone here was for
SOME kind of change.

The "change" you are suggesting offers NOTHING. For only 10 more
qustions on an exam than what you are suggesting, an applicant has
access to ALL Amateur allocations above 50MHz, all modes, and up to
1500W PEP.

There are ELEMENTARY SCHOOL KIDS who ROUTINELY pass the Technician
Class test. They typically pass the test with better scores and in
fewer attepmts than adults. Based on your proposal, the "Colt" class
offers nothing that FRS doesn't already offer, save for more power and
bigger antennas.

Go ahead and "submit" you proposals to the FCC, Stewart. Then they
can tell you "no" too.

Even if i was crazy Aluminum still would would not work for a ground-plane, you have got to find the steel and connect with it in order to get a reflection . Most Semi-tractors are aluminum or fiberglass bodied and even though the antenna brackets are bolted to the steel mirror brackets which are bolted to the aluminum or fiberglass doors there still would not be enough steel in the mirror brackets to provide a suitable ground-plane, that is why the mirror brackets are connected to the frame thru body and chassis grounds......Once again Aluminum or Fiberglass or Wood or Plastic or anything else that is not STEEL will not work for a ground-plane.... But feel free to investigate this issue yourself.....Thanx for the reply

Hey, what car has an aluminum body? Are you sure it isn't one of those with
a plastic body? Aluminum woud be prohibitively expensive.

Audi uses aluminum throughout their model range. The A8 is all aluminum
bodied. Other manufacturers use AL in door panels, roofs, hoods and trunk
lids. Most being higher end manufacturers.

Yah, OK Randy. The other thing you could try is to call the stuff
"gardening equipment". I'm sure no one will notice the clever
switcheroo.

Mint Condition. Bought last week and only used for 1/2 hour just to test.
It's a 40 channel full power walkie talkie with a real nice LCD digital
display w/RF meter. Comes with all accessories. It's practically brand new.
I paid over $90.00 for it.

Price is $50 shipped in US

Oh yes. I forgot about the Black Miss America contest.
How can blacks hold there heads up and bitch about unfairness
after sponsering such events.
Makes me want to say, " Go back to Africa you bunch of fucking
niggers" But I won't cause I'd be accused of being a racist.

I think the reason blacks have a seperate contest is because a
black contestant would never win with white ladies running.
Even the black male judges would vote for white ladies because
they are much prettier than blacks.
Look how many black guys are dating white ladies.
And look how FEW white guys date a black lady.
I hate having to admit it but a very large majority of
blacks are homely and unattractive. (large distored facial
features.. lips, teeth, jaw,kinky hair, etc)
They do look a lot like the pitbulls of the human species.
This is not racist talk. These are facts.

Very unlikely. The difference in any such feedback between a 1 foot
jumper and a 10 foot jumper is going to be very slight. Not enough to
determine if the amp will latch up or not.

By the way, if you have a decent amp, it will not have an RF detection
circuit for keying. It will be keyed directly by a keying relay in the
transmitter.

Source record: 69785

: Fred Hambrecht and Doc i applaud you for your knbowledge. Research and
: personal experience are far superior . Using a minimum of 18ft. of coax
: allows standing waves to stabilize in a matter of speaking between the
: antenna and the last component in your station . The 1/2wave formula that

Bull. The SWR will be stable, regardless of whether the coax is 1 inch long
or 100 feet long.

: we
: discuss is based on a frequency of 27.185Mhz which takes roughly 36ft. to
: complete its cycle . 18ft. being the 1/2wave point allows the a/c sinewave
: to complete at least half of its cycle . With no regard for STUBS

Look up the characteristics of a 1/2 wavelength line section. You will find
that it maximizes undesireable currents on the outside of the coax. It is
the WORST length that could be used - but many CBers think that is is the
proper length to use.

: changing
: the length of the coax will not change the SWR of the antenna but it will
: change the way the SWR meter reads the SWR . All standing waves return to

The antenna does not have an SWR. The SWR is due to the mismatch of the
coax to the antenna. That does not change with coax length, as the impedance
of the coax does not change with length.

: the radio but some are hidden and not able to be read by the meter. Using

Bull. SWR is not hidden.

What can (and does) happen is the length of coax will cause a change in
the undesireable currents on the outside of the coax. When you have these
currents, the coax is acting as part of the antenna. Of course the SWR
will change then - you are effectively modifying the antenna.

: odd multiples of the Electrical 1/2wave length between the meter and
: antenna
: will allow a true measurement of SWR to be made . This is the formula for

Again - bull. See above.

: Electrical 1/2wave: 492 x Velocity Factor / Frequency . And here is the

And when figuring coax length to eliminate currents on the outside of the
coax, you do not use the velocity factor. It is not acting as coax, it is
acting as an antenna element.

: formula for creating a STUB or 1/4wave Transmission Line Transformer: 246
: x
: Velocity Factor / Frequency . Downward sloping ground radials are used to
: raise the Impedance of a 1/4wave ground plane antenna from 35ohms - 50ohms
: .

And how does this happen, you might ask? Consider the fact that you are turning that vertical antenna into a vertical dipole. The extreme would be if the radials were straight down. In free space, the resulting feedpoint impedance would be about 70 ohms.

I knew sooner or later we would agree on something!

These folks usually have few branches if any in the family tree.

OTOH, if you were these folks how would you feel as an adult when a 16 year old black kids jump ahead of you and gets to work the drive up window at McDonalds instead of you? Being white and feeling inferior must be hell, ehh?

Glenn

Mad Dog,

Not to argue with you at all, but I have NEVER considered coax length in ANY of my installations. I think many folks spend more time with formulas and figuring "optimum" lengths than the results warrant. I have used LESS than a foot from radio to amp on many occasions with no ill effects as you describe.

Here is a question AND a situation that *seems* to refute the coax length issue. I operate Amateur as well as CB--altho not with the same radio. In my mobile, I use a multi-band antenna called a "Screwdriver" so named because it uses a cordless screwdriver in the bottom of the mast to move the loading coil up/down within that mast to QSY from one band to another. There is contact stock, or "finger" stock that surrounds the coil at the top of the lower mast where the coil exits. By pressing a switch near the radio, I can move to ANY frequency between 3.6 MHZ and 54 MHZ. I operate amateur, FEMA, and some military (USAF) frequencies for which I am licensed. My HF amp (650 watts) is coupled to the radio with a 12" jumper, and to the antenna with about a 20" jumper. Amp and radio are remoted within about a foot of the antenna. NOW. To obtain the correct resonance for a particular frequency, I have about a 13' coax up to the dash where I have a permantly mounted MFJ Analyzer. In the rear of the vehicle, I have a 12V antenna change over relay that switches between the radio and the Analyzer. This way I can observe the SWR/Impedance while moving the antenna coil onto the frequency I wish to use. This accomplishes 3 things: One, I can tune my antenna while under way without taking my eyes off the road. Two, it keeps me from having to put an annoying signal on the air, and, three, it keeps strain off the finals due to keying the transmitter into a badly mismatched antenna.

OK. IF, according to the much touted theory of certain coax lengths, I have to have a "certain" length, I would have to have TEN different lengths of coax varying from about 120 feet (3.950 MHZ) to 17 feet (28.610 MHZ)--one length "cut" for every band. That would obviously be impossible in a mobile environment. Yet, I operate in ALL those bands with "jumpers", none of which are over 2 feet long. Using the "coax length" assertion, this could not work, right? Further, I have taken the Analyzer to the rear of the vehicle, and run tests for different readings with different lengths of coax--one of which was 18' long. The readings were almost identical. The few differences in tuning were so slight as to be hardly identifiable. So, please, tell me how this can be IF coax length is so important. My coax length rule is this: Use just enough to get from the radio, to accessories, to antenna. How am I wrong since my stations always have strong signals and fine copy?

Best 73

Jerry

Notice the only people so far who are not racist in here are mostly
canadian, and europeans except for a very small amount of freaks like
MWBryant who were beaten by their drunk daddies so are too filled
with hate to see past their hate for their daddies to see the truth in other races.
Canada and Europe doesn't have the same kind of black people or
the same problems. Over there, blacks act normal, civilized and speak
with cool accents and are great people. They fit right in.
You foreigners need to come over here and live awile and see how blacks
effect you then you will understand and be "englightened" as to what we
are speaking of. Until then, you have no business talking as you don't have
a clue as to what our issues are.

Dave and Debby,
I have read your past posts, and I don't agree with everything you post, but I have to say I do agree with you on this one.. The Soundtracker circuit in the Cobra radios is useless!.. Uniden makes a much better radio, loaded with USEFUL features. Anyone who knows about radios knows that a radio made in the Phillipines, is a well built unit.Much better than a China-or Taiwan Cobra..I believe the only reason Cobra is still selling so many radios, is that the are riding off the the reputation they made for themselves a long time ago, when their product really WAS made in the Phillipines.I won't sell NEW Cobra radios. I won't even buy a Soundtracker USED, or trade-in on another radio. NO ONE wants these things!! They seem to sell very well in the display case at the store inside the truckstop, but I can't give them away in the CB shop. Buy a Uniden, you will thank me later.
Maniac.

It isn't illegal to be racist you moron.
Maybe he should report you to your ISP for being anti-racist.
It's the same thing.
All he's going to do in the worst case is pull out his credit card
and call another ISP and be setup in less than an hour and be right back
in your face. The best thing you can do is ignore him by using either a killfile
or descretion. Since you don't have any, I suggest you use a killfile and add me to
it while you are at it.

Why should hams worry about the CB band?

1. "400 channel" export rigs capable of operation on 10M.
2. Kilowatt splatterboxes triggering public outcry and legislation.
3. Outlaw attitudes making ALL radio operators look like criminals.

Need I go on?

Jeez Jay,

I thought mine was pretty darn FUNNY. Maybe I need to explain it.

"You know your linear's ah hummin when Tauzin and Hollingsworth
hand-deliver your Notice Of Apparent Liability". See, you being a ham
running a really high power illegal linear on 11 meters would get
special attention anyway. Usually they'd send a NAL by registered mail,
but in your case, since your power level was so high (theoretically),
two of the top FCC guys would come to your door.

I think it's very humorous and deserves a place in the list.

-Aaron

What kind of ignorant fool says "QRT and standingby"??? Those who use this on the radio only display their ignorance of the "Q" codes.
I hear radio operators constantly use this on ssb, come on folks pick up a book and learn the correct terminology before saying "QRT and standing by"

Don't use Q signals on voice period and avoid the nonsense. The few that make sense on voice are QTH and QSL. It is easier to say what you mean than try to sound like some idealized example of a radio operator.

3768. Re: Coax Question

Newsgroup: rec.radio.cb
Date: 2001-01-21 23:03:15 UTC
From: Handy Andy <CodysPC@Iserve.Net>
Message-ID: <afqm6tgd0tsn6kj76h2f2k31jmsikistk5@4ax.com>
Source record: 69721

Greetings!

Bill, as a sideline for a moment...I'm confused...

What is the true 1/2 wave length for 50 ohm RG-58 coax at 27.185. 66%
velocity Factor - if that helps.

I came across two sites that mention 14.33 feet, while others say it's
18 feet. So what is the true 1/2 wave length for RG-58?

I don't know what to believe now.

Signed...
Confused and Tangled Up In Coax...
:+> Andy <+:

On 21 Jan 2001 20:33:02 GMT, while the modem was ice fishing with the
Mouse, Bill Nelson <billn@spock.peak.org> dissertated the following:

:+> : Fred Hambrecht and Doc i applaud you for your knbowledge. Research and
:+> : personal experience are far superior . Using a minimum of 18ft. of coax
:+> : allows standing waves to stabilize in a matter of speaking between the
:+> : antenna and the last component in your station . The 1/2wave formula that
:+>
:+> Bull. The SWR will be stable, regardless of whether the coax is 1 inch long
:+> or 100 feet long.
:+>
:+> : we
:+> : discuss is based on a frequency of 27.185Mhz which takes roughly 36ft. to
:+> : complete its cycle . 18ft. being the 1/2wave point allows the a/c sinewave
:+> : to complete at least half of its cycle . With no regard for STUBS
:+>
:+> Look up the characteristics of a 1/2 wavelength line section. You will find
:+> that it maximizes undesireable currents on the outside of the coax. It is
:+> the WORST length that could be used - but many CBers think that is is the
:+> proper length to use.
:+>
:+> : changing
:+> : the length of the coax will not change the SWR of the antenna but it will
:+> : change the way the SWR meter reads the SWR . All standing waves return to
:+>
:+> The antenna does not have an SWR. The SWR is due to the mismatch of the
:+> coax to the antenna. That does not change with coax length, as the impedance
:+> of the coax does not change with length.
:+>
:+> : the radio but some are hidden and not able to be read by the meter. Using

:+>
:+> Bull. SWR is not hidden.
:+>
:+> What can (and does) happen is the length of coax will cause a change in
:+> the undesireable currents on the outside of the coax. When you have these
:+> currents, the coax is acting as part of the antenna. Of course the SWR
:+> will change then - you are effectively modifying the antenna.
:+>
:+> : odd multiples of the Electrical 1/2wave length between the meter and
:+> : antenna
:+> : will allow a true measurement of SWR to be made . This is the formula for
:+>
:+> Again - bull. See above.
:+>
:+> : Electrical 1/2wave: 492 x Velocity Factor / Frequency . And here is the
:+>
:+> And when figuring coax length to eliminate currents on the outside of the
:+> coax, you do not use the velocity factor. It is not acting as coax, it is
:+> acting as an antenna element.
:+>
:+> : formula for creating a STUB or 1/4wave Transmission Line Transformer: 246
:+> : x
:+> : Velocity Factor / Frequency . Downward sloping ground radials are used to
:+> : raise the Impedance of a 1/4wave ground plane antenna from 35ohms - 50ohms
:+> : .
:+>
:+> And how does this happen, you might ask? Consider the fact that you are
:+> turning that vertical antenna into a vertical dipole. The extreme would be
:+> if the radials were straight down. In free space, the resulting feedpoint
:+> impedance would be about 70 ohms.

Minor point, the attenuation is caused by the Capacitance, expressed in Cpf, Capacitance per foot. This is why the attenuation varies with frequency. The higher the Freq, the greater the attenuation. If you look at low loss coax Vs others you will see the change is in Cpf.

Hey Gremlin, sorry it took me so long to get back to you i have been so busy blocking unwanted senders to this group. Anyway Radio Shack has high and low pass filters ,put the computer in search mode and enter " RF Safety Calculator" . If you see lines on your T/V when you transmit or the radio stations on your stereo dissappear then you probably need filtering . One specific channel on t/v or stereo indicates a harmonic problem whereas all channels and picture interference indicate stray RF....I dont feel your in danger running a bare-foot rig, just dont stand close to the antenna while transmitting.....

3779. Re: Help Needed: CB radio on an aluminum car

Newsgroup: rec.radio.cb
Date: 2001-01-21 23:36:15 UTC
From: Handy Andy <CodysPC@Iserve.Net>
Message-ID: <c5rm6t0r4sdcejb88cc92s8i7rn8fmkrgg@4ax.com>
Source record: 69732

Greetings!

A lot of aluminum used as finish metal and trim is anodized to protect it's finish. So unless you remove that insulating "Oxide" coating - the metal will not conduct very well - unless it's welded, and you'd have to remove the oxide coating anyways to do the job.

Bolting it doesn't help in many cases - it will provide a DC ground for only a short time until it oxidizes again and you have a poor, insulated, electrical joint. You do have a valid point.

Aluminum is one of a series of metals that form oxides to reduce the metal. In doing so, the oxides form a barrier that insulates the base metal and reduces the corrosion and oxide formation in the lower atomic layers. You still can get RF thru it, due to the RF wave and skin effect is still deep enough to get thru to the base metal - just the connection points themselves, when exposed to oxygen in the air - will cause the oxidization reaction and attempt to insulate the joint.

Aluminum *can* be used for a counterpoise/ground plane, but it requires itself to be extremely clean and oxide free at the joints used to make the connections. It's not used often unless you make the proper types of connections and remove the oxide and use a non-oxidizing sealer or some type of sealant that uses a sacrificial anode to reduce or offset electrolytic and galvanic corrosion action.

The use of different metals - unless you can use a metal of a valence that reduces the galvanic difference potential that exists [like CU/AL wiring - use Brass as the connection between the two to reduce the oxides AL will work with CU to develop.] you will always have the oxidization and corrosion problems associated with AL and even Magnesium. [Mg can be used to help with this, Zinc is another - both are used for sacrificial anodes in other applications.]

Happens often enough in CB Mirror mounts to cause a concern. I recommend and use stainless steel now. Works like a charm. Chrome plated works in a pinch but you get the "oxide" corrosion problem later when the plating wears off and you get to the Nickel and Brass base metals.

Message-ID: <94fs8t$35f$1@iac5.navix.net>
Source record: 69737

Jerry, your talking past each other. You solved the problem of the mismatch by varying the inductive reactance. I think you would agree that all short antennas are seen as capacitive reactors. You then proceeded to cancel the Xc with Xl leaving only the resistive portion at the desired operating freq. Let's take a case where the antenna is fixed. We can cancel the Xc in several ways.

1. Add a capacitor to ground from the feed point
2. add a coil in series with the feed point.

Both result in a match if the proper values are selected.

3. live with the mismatch and mask it with coax.

This argument goes on because CBers have seen the SWR go down as they change the length of the coax, most people believe what they have seen with their own eyes. The person knowledgeable of electronics says it can't be,but he/she has a set of conditions where the antenna and radio are matched. Given this condition the length of the coax does not matter.

We know if we have a quarter length of coax the impedance inverts, a half wave and the terminating impedance is repeated. At some length our SWR meter will be happy, is that important? I don't think so, but generations that think 1:1 is the holy grail are satisfied.

The only real way to tune a mobile is with a field strength meter. You know then you are radiating the maximum energy regardless of SWR.

The best SWR on any ham band with my base antenna is about 2.3 to 1 and on 75 meters it is over 8 to 1. I use a 130 foot 12" diameter cage and tune it with a tuner to 21 feet of coax that in turn feeds my ladder line (450ohm). Do I care about SWR? Nope, but SWR is a religion to somefolks and trying to convert them is fruitless. That being said and the conditions as stated earlier, changing coax lengths changes what the SWR meter reads.
Notice I did not say the SWR, why should that matter, because if the meter reads right, the radio will load it and everybody is happy.

Very nice EF Johnson CB (I know this is a ham forum - but most of the Johnson folks hang out here) walkie talkies from 1970. Work very well, and include original leather holsters, service manual, and owners manual. Everything works, including telescoping antennas. Very nice pair of Johnson radios for a Johnson collection!

Thanks for the look,

Dave

cabbagebrains,

What's your point? QRT is an abbreviation meaning, I am ending
the contact. So, QRT and standing by is pretty clear. The station
is simply indicating to the other that he is ending the contact and
letting all other stations know that he is standing by or subject
to call by any other listening stations.

BTW, the name fits.

73,
NAO911/Jack

Thanx and the formulas i posted here were simply for the benefit of those that didnt know they existed, this is a 11meter newsgroup so i tend to state theorys that would apply here . Everything i post is my opinions and not necessarily fact and should be viewed as such. However if you have a high SWR and you are using less than 18ft. of coax then it would be an area to investigate. Cheap linears have suffered the phenomena i described on numerous occasions, this may not be the case with the equipment you are using. 1/2wave electrical lengths are simply an option to enable the SWR meter to read the true SWR , that is the only feat that is attained by using that formula , another way would be to use a remote SWR head at the base of the antenna . However the difference in readings using the formula or random lengths is minimal and actually not worth the time in doing . I dont use the formula on my base rig or mobile and i walk the dog and kick the cat quite nicely thank you . Anyway thanx for the reply and i hope i clarified myself to your satisfaction.....

Huh? Gee I guess I need to throw that 1 ft cable between the rig and amplifier I have been using the last 20 years away. How do standing waves stabilize?

Mad Dog wrote:

> All coax has resistance in it , show me a electrical conductor that does not
> have a specific resistance, thats what i thought . If the length of the
> coax did not matter then i guess it would be ok to run a 1ft. jumper between

QRT is shall I stop sending? /stop sending, it has been used for years on the ham bands for "I'm going on the quiet side" The meaning is determined by the users. If someone wants it to mean "I am ending this contact" it is perfectly permissible.

Are you not aware that to pass judgment on anyone or anything is out? Everything is allowed if the user wants it. Get with the new sensitive millenium and don't try to pass your standards off on anyone else.

The only accepted values are no values at all!

Finally someone has something intelligent to say on the subject.
BTW how do you know it was your ancestors.
Just cause we're white doesn't mean it was our ancestors.
What the blacks need to do is stop trying to get sympathy
for something that supposedly happened to their ancestors.
Their attitudes are what keep many of them from moving up
the corporate ladder... not this imagined racism.
Who the hell would want to hire a black with the racism
attitude. They are alway trying to get mileage out of the
issue because so many of them can't perform.
I have a third level manager who has none of the black
attitude and he is the coolest guy around. He just does
his job and performs well. So I know it can be done.
Enough said on the subject unless some other asshole
wants to step in.

Yeah, I stopped spanking him after a while myself. My hand started to hurt, and I don't want to use the paddle because he isn't worth the effort.

I am also a licensed HAM, and sometimes I advertise my call, sometimes I dont. I also got my start in CB. However, I do use my real name.

Voobner is fun to watch though. But after a while it got boring. His mind is too simple. He's basically a liberal mentality. Here's how his reactions work when confronted by someone.

Voobner rules for "discussion"

1) Accuse them of being illegal
2) Insult them on a personal level.
3) When a person acuses him of lying he acuses them of the same, or refers to rule 1 above.
4) When someone owns a "export" radio, accuse them of illegal activity on it. After finding out they're a HAM deny your blatant accusation (lie).
5) Reply to the post as a new thread to try to throw SCD off the trail and accuse them of lying or illegal activities.
6) When you're spanked good, start a new thread and try to spank them back with their own material. (lame)

Personally, he's not in my kill file yet. Reading SCD spank him is often funnier than most sitcoms on TV. So he's gone from being a problem to more of being a sideshow freak for me.

My grammar and spelling is better than yours you uneducated
bastard. You're really embarassing yourself.
You watch too much TV and have been brainwashed into
believing that there is a conspiracy against blacks.
I'm here to tell you to wake up call them on their Politcally
Correct BS.

I haven't been to the CB group in a while but I doubt it has changed much. Considering all the fighting, name calling, trolling and general moronic behavior (sounds the same on the radio), I can't see why this added thread makes much difference. BTW, I do check headers and try not to cross post. I am doing so this time for your benefit.

I'm curious Mr. Snot. Do you live in public housing in a "black"
section of town? Where does all your conflict come from? What
issues could you possibly have?

Once again, if you enjoy it then yeah, learn it. I enjoy to juggle, but I
don't force other people to learn how to do it. Your statement above
attempts to justify this antique form of communication by saying, "morse,
enjoy, learn or get lost". It makes no concrete "REASON" as to WHY it
should be a mandate on a test. And as far as boyscouts go, that's fine and
dandy, but uhhh... Your comparing apples and oranges. Boy scouts and
amateur radio licenses are totally different things.

>
> It is a rather odd situation but a real one that the very definition of

"gazillion years ago"... Ok... Great... Being on the Agenda, FCC, fine...
Yes, I understand the govt red tape involved, but you still haven't given me
a REAL REASON for having it as a requirement on the test. Ok, because the
way the law is written, fine, and I accept and abide by it. Even if it was
made a "gazillion years ago".

I do have my No Code Tech license, and I find that if one doesn't at least pose forth the discussion that often times it's not even brought up. In a nutshell what you're asking me to do is keep quiet about it. I think it's a viable debate, and deserves discussion.

Interesting that talking about Morse as a requirement brings up the Amish.
Talk about obsolete.

My point is that exactly. The Amish CHOOSE to live their lives that way.
It's a choice... Same should apply to morse code as a modulation method.
Instead of a code test, perhaps increasing the questions on the technical
part of the exam would be an excellent idea, and perhaps some added
questions about such modulation methods as spread spectrum.

Doesn't matter what your opinion is nor how irritating you are.
This is a free country and this is what free speech is all about.
To live, say and if have to be, die for your right to have your own opinion.
Don't let the monkey lovers get you down my friend, I encourage you.
Just learn to tone it down a little so you don't get consumed with your own hate.
I understand you are in alot of pain and life isn't fair. No need to be consumed
with anger though and I say this for your own health as you will make yourself sick
if you aren't already. There is a time to stop hating so much, that's when it starts to
hurt
yourself. That's when it owns you instead of the other way around. I understand why you
hate though. It's easier to hate than cry or hurt anymore, just don't let it take you over.

People who don't have the intelligence to make a point
often resort to spelling and grammar corrections.
Its so easy with spellchecker.

So if you were to start a club for jugglers and one of you rules for admission was the demonstration of juggling 3 balls, I should be let in because I want to be let in. I find your test unfair and it seems to me it is just a hazing ritual that might keep out people that one day could be the worlds greatest jugglers. Ergo, you must remove any standards because I do not want to achieve them.

The only values are no values! Anything else is elitism that makes me feel bad and attacks my self esteem. Values must go, they make me uncomfortable and you are politically incorrect in imposing them you elitist juggling bastard.

1mangayboy: Happy birthday, 1mangayboy's mama!<1mangayboy hands he a German Shepherd puppy>

1mangayboy's mama: Oh how sweet!! you are such a good daughter, 1mangayboy!

1mangayboy: Thank you mommy, can I go out to play with my wife Dweebo now? He promised me I could deep throat him after he finished making it bigger with one of those pumps.

1mangayboy's mama: Sure daughter, you can go out! but before you go, would you please get a can of Alpo from the kitchen and bring it in my bedroom? Puppy and I got a little gettin' acquainted ta do!

1mangayboy: Sure mommy! Hey can I watch you and puppy?

1mangayboys mama: OK, sure that would be great! But only if you will let me watch you and Dweebo.

1mangayboy: WOW THAT WOULD BE GREAT! I'll go get the Alpo and run down to the adult book store and get Dweebo right now...Mommy, please dont use ALL the Alpo before we get here!!!

FOLKS, DONT TAKE MY WORD FOR IT, SEE FOR YOURSELF!!!

There is no need to raise the awareness of people to white students.

> 3) Most universities and colleges also sponsor "Black Pride Week."
> Black students are given special t-shirts and encouraged to show

> would likely be expelled for their actions.

I think everyone should be proud of their heritage. American black
heritage is unique, this is undeniable.

> 5) In recent years, Martin Luther King, Jr. Day has been added to our
> calendars as a holiday. Meanwhile, Columbus Day has been de-emphasized
> or removed entirely. It's okay to honor a known womanizer and
> communist symphathizer, but not the man who discovered our country.

MLK's message was one of peace and harmony, Columbus' message was one of
genocide, rape & pillage and take-by-force. Who would you rather live
beside?

> 6) Why does the United States Postal Service issue a series of "Black
> Heritage" stamps, but no corresponding "White Heritage" stamps?

Because the relevance of blacks on the history of America has been
sorely neglected.

> More to follow...

I've heard enough, thanks. This has absolutely jack to do with the topic
of this group.

So much for free speech in America! Did he not realize that the only thing worse than a hate crime was hate speech? He deserves to die for his political incorrectness. I would suggest first he be tortured by having to listen to the entire works of Maya Angalou.

Next her running mate Wesha'l Overcum will teach him the meaning of Kwansa. After that he shall be sentenced to four weeks of "sensitivity" training and then dragged through the streets tied to the back bumper of a 1992 Caddy Bro-ham that is playing rap music at full volume and engaged in a drive by. That will teach him, then we get his ISP to cancel him.

: meter to read the true SWR , that is the only feat that is attained by using

As I have pointed out before, this is incorrect. I wish you would quit making the claim. 1/2 wavelength is the worst length you can use, as it maximizes the probability that the outside of the coax will become part of the antenna.

Lets find out what your ISP thinks of this Dickless.
You see dumbdick... you have to stop participating in
this back and forth stuff before people will believe that
you really care about it one way or the other.
What really is pathetic is how much of a hypocrite you
are. I know you feel the same way but are too much of a limpdick
to express your real feelings.

"Handy Andy" <CodysPC@Iserve.Net> wrote in message
news:afqm6tgd0tsn6kj76h2f2k31jmsikistk5@4ax.com...
: Greetings!
:
: Bill, as a sideline for a moment...I'm confused...
:
: What is the true 1/2 wave length for 50 ohm RG-58 coax at 27.185. 66%
: velocity Factor - if that helps.
:
: I came across two sites that mention 14.33 feet, while others say it's
: 18 feet. So what is the true 1/2 wave length for RG-58?
:
: I don't know what to believe now.

Hm, neither, if I remember correctly.

One half wavelength in open air (in meters) is 150/f - where f is in
MHz. Multiply that by the velocity factor to get the velocity in the
coax.

150/27.2 (close enough for such calculation) is 5.51 meters
5.51 x .66 = 3.64 meters

I think that comes out to approximately 12 feet.

But if you are looking for coax lengths that affect the SWR reading, due
to the coax acting as an antenna - then you don't use the velocity factor.
Treat the coax as an antenna element - the result will be approximately
18 feet.

Wanted by collector in Australia- Midland 7001 CB
Would prefer standard, tidy and good working order. But would accept faulty
or modified radios. Modified to 10m band is fine.
Will pay shipping.

Remove the spam trap to reply.

Of course I am a hypocrite, I have acquired the new sensitivity of the left. I am working extremely hard at eliminating the last vestiges of elitism. I take no positions to offend anybody, ergo I agree with everything.

I humbly apologize if anything I have ever written in my entire life was offensive to you, you might also want to read any of several books I have written for any statements you find offensive. Please let me know which ones caused you any angst and I will have them burned at once.

Perhaps you would do me the favor of reviewing my present book as I complete each chapter, God forbid that I may include something that is either racist, demeaning towards women, midgets... whoops little people, or any other thing that might offend the most sensitive sole.

My life is now dedicated to setting my standards so low, that all will find them agreeable.

I have no idea where you may have gotten that Idea, Aluminum is a better conductor than steel. I bet many of you have at one time or another used a "star duster", it was all aluminum as are most ground plane antennas for a base. Stainless steel has a much higher resistance, but is off set by it's ruggedness for mobile use.

In short any conductor may be used as a ground plane, some are just better than others, and aluminum is definitely better than steel. Just don't try to use a mag mount on it.

When you can hear sound emanating from the chicken wire under the stucco of your house.

When you go to fill up the Suburban gas tank, key down, and change the final amount on the gas pump LCD display from $50.00 to $0000.

When the gas station is closed, lights are out and you key up and light all the Florissant bulbs under the awning.

When you pull up to a intersection, key up and watch everyone in there cars next to you fiddle with there stereos because all of a sudden the have poor reception and they hear a loud voice saying, "AND I GOT DOWN!!!!!!!!".

when your neibors call the fire department because they seen green coronas radiating from your antenna and they think its on fire.

When you fire up that 10 bushel mule and within 15 minutes the police are in you neibor hood because 5 house burglar alarms calls came in all at the same time.

When you key down the 32 pill mobile and take out the on board computer in the car next to you.

When you antenna rotor turns by itself from to much RF.

When you feel that arthritis pain in you bones and migraine headache after shooting skip for awhile.

When you go to check your phone answering machine and there is a water gate of your self on it.

When you can place a order for food at the Albertos drive thu and you haven't even pulled in the parking lot yet.

When you have "talk back" coming out of your car door speakers and your stereos OFF.

When you accidentally leave your mike keyed up after going 10-7 and you have people giving you a 21 from the other side of the country telling you that you threw a dead carrier blanket for 30 minutes. You run back into a100 degree shack praying to God that you dint fry any thing.

Message-ID: <OnSa6.1239$1x1.1778612@nntp3.onemain.com>
Source record: 69929

His point is that QRT in the old days was NOT the end of a contact, it was the end of operations.
Personally on phone I prefer the style of an African station on 50 MHz many moons ago, "To hell with you Yanks, I'm going to bed."

There were prosigns on cw for 'end of contact'. Remember that most of these were used between ships and coastal stations, not all of which were 24/7 operations. The Q codes were maritime, the military used Z codes. Some were unofficial: QLF was 'next time send with your LEFT foot', the military ZBM (get me a qualified cw op on this circuit) became ZBM2 (get me a qualified op of any kind on this circuit cause you ain't it).

It is an art form you will never see again so I don't get all bent up about misuse. Professional ops could tell a station in milliseconds by its sending style or even if a regular on a net was hung over and you needed to QRS (send slower). Telegraphy was indeed a fraternity.

The landline ops had a number of abbreviations that survive; Western Union had code books from the 1860s. It was, for example, pretty customary to end business messages with 'best regards'. After sending this 147 times a day it got to be old shit and the ops abbreviated it by an exaggerated dah-dah-di-di-dit di-di-dit-dah-dah in effect saying SSDD, the origin of the familiar 73. The 'love and kisses' favored by women became 88 for reasons I will let you research. In theory, '73s' should get you a visit from the Department of Redundancies Department but I'd rather enjoy the history than repeat it.

When you think about it, arguments about the proper use of a dead language are not among the brightest. Right up there with giving your handle in Etruscan.

Dick, N&#65533;BK, aging boy wonder.

That's where we differ, I don't even think it is debatable. There are three existential facts: 1) Morse is dead in modern communications and will ultimately be removed as a testing criterion. I did 20, you won't have to if you wait long enough. 2) It is alive and well on the ham bands. Partake of the DX available only on CW or don't, es macht nichts by mir (polite way of saying I don't really give a shit whether you learn it or not). and 3) it is not within the power of the FCC to change the requirement at the moment and will not be until the treaties are modified. Opinions under these conditions are not even a good grade of hot air. Speak to your heart's content but don't ask me to listen because there is

nothing to debate.

You can wait for the inevitable or you can learn the code, those are the only choices on offer. In the meantime, stop the infernal bleating already.

3881. Re: Coax Question

Newsgroup: rec.radio.cb
Date: 2001-01-22 12:08:03 UTC
From: Handy Andy <CodysPC@Iserve.Net>
Message-ID: <398o6tch11meg8jo89h7bgpu8fkg5de6r3@4ax.com>
Source record: 69935

Greetings!

Good points.

Then what we're looking at are really two issues wound up in one.

One, the 1/2 wave length of coax in response to...[oh boy] a balanced load. Hopefully this is correct, and that means approx 12 feet.

Second, the antenna and coax working together in an unbalanced system, where the coax is reactive to the antenna - and vi ca versa, the wire conductor length of the coax is similar to the antenna length as if it were a radiator. [Key word here for flamers *If*]

Is the above correct?

The reason why is this, the subject of necessary coax length and the antenna/coax length requirement are two issues that are bifurcated, they are one in the same but two separate principles.

Makes for an interesting contemplation.

Signed,
Less confused, and untying the knots in the Coax...

>

Actually, this all depends on where you are. In my area, when the skip is not rolling, the band is basically dead. There are maybe 1 or two "local" channels, but the rest show less than S4 signals (except for ch 19 which is always active). Contrast this to the late 70's when there were at least a half dozen active "local" channels. You couldn't drive through town and expect to hear anyone over a mile or so due to the bleedover from all the other active channels. CB usage has dwindled since it was replaced by the internet as the latest communication's fad. And this is on the east coast, not in some small town in the midwest.

The only real "noise" come when the skip is in. Once the sunspots go back into hiding (and I'm counting the days) the only noise will be occasional static. There is very little interference from power lines (unless one of the insulators is breaking down, and is arcing), and most other static sources are very localized.

When the band is quiet, 4 watts can talk 20 or 30 miles. 12 watts SSB can talk close to 100 (Assuming, of course that you don't live at the bottom of a canyon).

Running an amp to get over skip noise only exacerbates the problem. Your signal is someone else's skip noise. If everyone were running 4 watts, the skip level would be no more than S9 under normal skip conditions (At least that's what it was like 30 years ago). With everyone running an amp "to get over the noise" the actual noise level has risen to +20 over S9, or more, levels at times. It's a self defeating concept.

Of course, like nuclear arms reduction, getting CBers to agree to not run amps, is as tough as it was convincing the ruskies that we had to reduce nuke missiles. "you first!"

The band is a much different animal when the sunspots are low. We can only sit and wait until that happens in a few years. For me, it can't happen soon enough.

Source record: 69937

>
>Perhaps you would do me the favor of reviewing my present book as I complete
>each chapter,

Hi, Fred. Here's some P.Corr. examples from material which recently crossed my desk. As you work on your book-in-progress, please try to follow the pattern:

(1) The Russian Space Station will not fall out of the sky. It will "deorbit".

(2) A structural engineer's report on why a house needs $20,000 worth of structural repairs indicated that "the home was built on active soil". (Didn't the Bible call this "shifting sand"?)

(3) An recommendation for a sump pump in a basement stated that "there is evidence of subsurface moisture" under the dwelling. (It's a SPRING, folks. Call it what it is.)

(4) If you are in the United States illegally, you are no longer an "illegal". You are "undocumented".

(5) Those who claim to be "pro-choice" do not consider "pro life" as being one of the choices.

(6) A "partial-birth" abortion is not as bad as a conventional abortion.

One more thing, Fred. I know this won't make any sense, but trust me.

YOU cannot (and probably never would) take a handicap parking space. However, anyone who has a handicapped person in their family can use the permit wherever they go--shopping, concerts, etc. It is not necessary for the handicapped person to be with them.

Likewise, the handicapped person can pull into one of the marked spaces at the shopping center and sit in the car while their able-bodied nephew hops out and runs into the store.

Here's the problem, Fred. You are a relic left over from a simplier time. The world is changing rapidly. But take heart, OM. If you continue to hang out with the fast-lane crowd in rec.radio.cb, we will "get you up to speed" so you won't get run over.

If you don't change your views, life will look like a Chinese fire drill.**

Dear OM:

It has come to our attention that you are reading nursery rhymes to the kids from an outdated version. Please make the following modifications:

(1) Change the title of Chapter Seven to read, "Three Visually-Impaired Mice."

(2) Replace Chapter Four with:
Hickory Dickery Doc,
Three mice ran up the clock.
The clock struck one
And the other two escaped with minor injuries.

(3) In Little Red Riding Hood, please modify the original text to the shorter version where the Wolf does not make it to Grandma's house. Much earlier in the story, he is spotted talking to the little girl in the woods and is arrested on suspicion of being a pedofile. His explanation that "I only wanted to eat her" does nothing to help his case.

(4) At the request of the Betty Croker Institute For Safe Cooking, please paste this over Chapter Eleven:

Sing a song of sixpence, a pocket full of rye.
Four and twenty blackbirds, baked in a pie.
When the pie was opened, the birds began to sing
Because the cook failed to pre-heat her oven to 350.

>My life is now dedicated to setting my standards so low, that all will find
>them agreeable.
>

Glad we can help.

Hello all, I`ve been on citizen band since about 1968 i guess.. I love the fact that it`s a non license band and you dont have to be in a contract with the Federal Government to enjoy the hobby. On sideband I`m November-Wiskey 9 and my handle is Zed. If there is a good band opening and stations are comming in from all over the globe, i enjoy it even more. Just the other day I made contact with a station in Moscow. The guy could hardly speak english but managed to utter a few phrases and my call. No amp, No beam, just a Saturn base and an Antron 99. The only falt I reall have with 11 meters is the operators who yell and shout in a high pitched voice into a power mic turned all the way up when trying to make a contact.
sheesh.. that and the phrase " Howbotcha DX Land " reapetedly. Oh well, I still love it.. I mean it`s free unlike a cell phone. If I get into trouble out on the road, I just yell
for BIG MOMMA

The Greasy Commando " nw9zed '" signing off.....

4. Hams who still operate on 11 meters and have to put up with :
a. foul-mouthed operators
b. intentional interference
c. splatter across the band due to overmodulated and
over-powered stations

>It isn't illegal to be racist you moron.

That's true.

Racist, anti-Semite, ultra-conservative: It's just as
legal to be those as it is to be a liberal.

It would be good for people here to remember that.

>Maybe he should report you to your ISP for being anti-racist.
>It's the same thing.
>All he's going to do in the worst case is pull out his credit card
>and call another ISP and be setup in less than an hour and be right back
>in your face.

You assume he is in an area served by multiple ISPs. Such
is not always the case. For some people in rural or out-
laying areas, one ISP is all they get.

>The best thing you can do is ignore him by using either a killfile
>or descretion. Since you don't have any, I suggest you use a killfile
and add me to
>it while you are at it.

Discretion.

That's always nice.

Hey, is this one of those " 9 out of 10 scale" items you have ?? I was just
wondering because the " 9 " that I bought was a " 3 " on looks and function.
The item may have been a " 2 ", but I was being kind.
My advice is to stay away from this thing !!!!!!!!!!!!!!!!!!!!!!!!

Diagnostic Computer

One day, in line at the company cafeteria, Jack says to Mike behind him, "My elbow hurts like hell. I guess I better see a doctor."

"Listen, you don't have to spend that kind of money," Mike replies. "There's a diagnostic computer at the drugstore at the corner. Just give it a urine sample and the computer'll tell you what's wrong and what to do about it. It takes ten seconds and costs ten dollars... a hell of a lot cheaper than a doctor."

So Jack deposits a urine sample in a small jar and takes it to the drugstore. He deposits ten dollars, and the computer lights up and asks for the urine sample. He pours the sample into the slot and waits. Ten seconds later, the computer ejects a printout: You have tennis elbow. Soak your arm in warm water and avoid heavy activity. It will improve in two weeks.

That evening while thinking how amazing this new technology was, Jack began wondering if the computer could be fooled. He mixed some tap water, a stool sample from his dog, urine samples from his wife and daughter, and masturbated into the mixture for good measure.

Jack hurries back to the drugstore, eager to check the results. He deposits ten dollars, pours in his concoction, and awaits the results. The computer prints the following:

1. Your tap water is too hard. Get a water softener

2. Your dog has ringworm. Bathe him with anti-fungal shampoo.

3. Your daughter has a cocaine habit. Get her into rehab.

4. Your wife is pregnant...twin girls. They aren't yours.
Get a lawyer.

5. If you don't stop playing with yourself, your elbow will
never get better.

COLD as ICE and TWICE as NICE.. Mr. ICECOLD BIG APPLE TREES says.. It don't
mean a THING if you ain't got that SWING!!!!!!!

ab if it is bad as you say it is, then why bother. i do not understand
hams who hang around the cb radio ng, and try and tell us how to think,
act and operate, but who have 'graduated' as you guys call it. man , if
it is such a honor to be a ham extra, then why in the hell would you
want to operate on the cb band, i mean with all the channels you can go
to, you still want to talk on 11 meters, my, my,......cd is out...

hi leland, once more your talking about something when you have no idea whats really going on the same as you do when you talk about ten meters. i have no reason to block anything from dick. he's a nice guy, been liscenced for years, and is well past the renegade no-coder rambo type feelings you have towards anybody else who didnt pass the 30 question test(radio shack manual or not). you know why you were blocked but we dont have to dredge all that up again do we.

>That's fine. Just wanted to let you know how this guy operates. Rub his fur
>the wrong way and he cuts you out.

For the ignorant like you...
The reason for the Miss Black America contests and other events with the title Black, was because they were never allowed to compete in any of the other contests, like the miss america so they had to make their own contests!
Boy some people are so dumb it actually hurts me physically!

There are times where raw emotion and honesty are not a pretty sight. The man does have a point though. How many of the trolls that currently populate this newsgroup would display this rude, harrassing behavior if they were actually face to face with the harrass-ee?
937's, and others, behavior is no worse than any of the trolls, based on news group etiquette.

Ice I said what I would do,but the whole race issue is stupid if we
all work togethe we could possibly change things.Color to me and my
freinds dont mean anything it is the person that stands for him or her
self.We all bleed red and are organs are the same inside.Cars ,Trucks,
houses and I could go on are diferent colors but that does not change
a house not being a house we are all human beings and that does not
change . But lets stick to cb! You all have a good day and better
tomorrow!

I would really watch how much you are paying up front... hehe, I just found 3.5inch, I assume 1.44mb disks, a pack of 10 for $54.99 in the computer section. They should be about $5.00

If I translate it correctly, it comes down to 'others do it so what is the fuss?'. While this mantra seems to permeate a lot of life, the last time I really dealt with it directly was with a teenage offspring, explaining in cold, logical terms the error of his ways.

Man, that cold logical reasoning is tough on the hands.

> > > 20th Centuries...

I beg to differ, Mr. Mathemagic. The 20th Century was less than a month ago...and severe discrimination against blacks is still within living memory of many people, black and white, today.

When *they* get a square deal (which is still hard to come by for many), then their complaints will be unwarranted. Until then, yours are unwarranted. I have none, since I have never once been discriminated against. Every opportunity I have had I have come by fairly and on my own merits, whatever they may have been. If you cannot make the cut against a black person, or anybody else for that matter, maybe you need to examine your own shortcomings (which I'd say are pretty numerous, based on your multitude of whining malignant posts).

BTW, have you gotten professional help yet?

Mitigating circumstances.

If 937 wants nothing else but to enjoy his hobby and an individual is constantly in his face, or in the face of others with like views, then I feel he has a right to express his opinion (anger), in whatever manner he sees fit, short of actual physical altercation.
Constant hammering at a point already acknowledged to be true by the hammer-ee is not only rude but highly ineffective as well, if the hammerer really wants to change the behavior. In this case, constant trolling just to get a response is the goal. There is no desire to change the perceived "illegal" behavior, just a desire to disrupt by, so called, concerned citizens.
The analogy you use is not valid, IMO, in this case. I, as a "CB'r, do not like it when the Hams are perceived as the disciplining adult and CB'rs as the disciplined child. Especially when that attitude is displayed in a forum that is expressly for CB, not Ham, discussion.
Anyway, dat's all I'm going to say on this subject today. The skip is rolling here in Southern California and if I want to take part, I'd better get rolling myself.
Have a nice day, 4-10?

Jeff

Richard,

I doubt that was his point at all since "cabbagebrains" wasn't around in the "good old days". The usual contention here is that the phrase "QRT and Standing By is repetitive. This prosign has simply been adapted from its cw usage to voice operation for the sake of convenience and brevity. Some ssb operators just like to keep it short. It is not unusual to hear ops signing QRT and QSX either. There is no repetition here. "Ending this contact and subject to call" (QRT and Standing By) is the meaning as it is currently used by the majority of cb and freeband ssb operators. Come to terms with it and let's move on.

Can you say, "flamebait"?

73,

Bill,

The usual contention here is that the phrase QRT and Standing By is repetitive. This prosign has simply been adapted from its cw usage to voice operation for the sake of convenience and brevity. Some ssb operators just like to keep it short. It is not unusual to hear ops signing QRT and QSX either. There is no repetition here. "Ending this contact and subject to call" (QRT and Standing By) is the meaning as it is currently used by the majority of cb and freeband ssb operators. Come to terms with it and let's move on.

Misuse? I think not. Adaptation and improvisation?....Yes.

Unfortunately, this is not just a fantasy by GSEVEN. This happens. I
was on the road when a "keyclown" came by, shouting some inane drivel
into his CB, wiping out everyone's stereo.

If this is the kind of "hobby" you want the "freedom" to pursue, I will
oppose it with every ounce of strength I have.

3954. Re: FCC proposal for new Amateur "Colt" License Class

Newsgroup: rec.radio.cb
Date: 2001-01-22 20:36:22 UTC
From: "Paul R. Stoetzer, N8HM" <N8HM@arrl.net>
Message-ID: <fP0b6.84$b7.121951@nntp1.onemain.com>
Source record: 70059

There are several problems with this proposal:

1. As a 15 year old, I can tell you that the most interesting thing of ham radio is DX, not short range VHF communications.
2. This proposal would isolate the newbies, if there are not any other recent "Colt" licensees around, they would quickly grow bored and would not upgrade. Chatting with people who have been around a while and who are talking about the Walk-a-Thon or picnic the local club is involved in or the great conditions on the HF bands today.
3. The Tech license is already extremely easy to get. I got my Tech just over a year ago and it took about a week to study enough to pass the test, and that was with 55 questions on two tests, not 35.

While I agree more young people are needed in the hobby, the problem is not the license structure, which I believe to be perfect, it is the PR deficencies.

Its actually a Superstar 360FM, but utilizes the famous PB010 chassis, same performance!

Regarded by many as the best chassis ever made.

Also used in the Export Grants, and Export Teaberry stalker

Oh thanks White. If you were refering to me... I have plenty
of ISPs here in my large city. But, of course, that isn't an
issue because there is no reason for me to be concerned.
If ISPs pulled people's accounts for simply being an asshole
or upsetting mindless morons... yours would have been
pulled long ago.
Not everyone in the world thinks like you white.

Same thing I did to you, except it goes straight in to the old trash can, I don't even bother to waste the bandwidth bouncing it back. That way you are left scratching you back end wondering if you are even making the trip. You have a problem posting your replies in public? Is that why you insist on send me E-mail? Or are you afraid of looking like you are consorting with Hams on this news group?

Are you black? Go ahead and cite some examples of discrimmination
that blacks YOU KNOW have experienced.
Many blacks imagine they are being discriminated against
just because things don't go there way or they read something
into things that aren't there. Also, black GET AWAY with
discrimination all of the time. I'll cite you an example...
a black guy I work with constantly said, "That was mighty
white of you" and would laugh. I knew he had a sense of
humor about the whole whiny racial BS and I didn't think
a whole lot of it. But other white people in the office did.
And were totally shocked whenever they heard it.

"When *they* get a square deal (which is still hard to come by for many)"
You've got to be kidding! They are getting more than a fair deal in
this country. Our government agencies go way the hell out of
there way to make sure of it.
Stop listening to the crap about racism and pull your head out.

What about this as a proposal. Leave everything as it is as far as licenses
are concerned. But, then eliminate the rule that you can't charge money
for testing people. And, then work to get the FCC to cut a deal
to allow, for example, Radio Shack and ham radio stores to give ham radio
license tests right in the store -- and set up a computer system to give call signs
right on the spot. Then, the stores could make a little money giving the test.
And, might pick up some extra sales from new hams.

We dont communicate in free space so i guess it doesnt apply just like dbi ,
900 / 27.185 = 33ft.
33 / 2 = 16.5ft.
1 / 2 wavelength @ 27.185 Mhz = 16.5ft.
thanx for the reply......

The money they charge is for all the expenses of testing - there isn't a
mandatory charge

What about this as a proposal. Leave everything as it is as far as licenses
are concerned. But, then eliminate the rule that you can't charge money
for testing people. And, then work to get the FCC to cut a deal
to allow, for example, Radio Shack and ham radio stores to give ham radio
license tests right in the store -- and set up a computer system to give
call signs
right on the spot. Then, the stores could make a little money giving the
test.
And, might pick up some extra sales from new hams.

We dont communicate in free space so i guess it does not apply just like dbi
which is gain in db over an isotropic radiator.
900/27.185=33ft.
33/2=16.5
1/2wavelength at 27.185Mhz = 16.5
thanx for the reply....

I am not black.

As to your assertion, no doubt - many people have this "us vs. them" attitude that leads practitioners to believe they are getting screwed at every turn. I know lots of whites who are this way, too. *LOTS* of whites. My Dad among them, even though he had a good job and a great place to live his whole life.

I personally know of no blacks who have been discriminated, but I don't make it habit of discussing this with most of the blacks I know. I do, however, frequently hear of racially-motivated events in my area that are blatant; for example, racist graffiti, occasional crosses being burned on lawns, and that sort of thing. If you want a personal example of general discrimination, an Asian friend of mine, a generous and hard-working person who is respected by many who know him, has been frequently taunted and harassed and threatened by people, complete with name-calling, for being Asian. He was initially turned down for duty in a local fire department because he was Asian, even though he passed all tests with flying colors, more specifically, because the employer thought he would have clashes with the potentially racists firefighters on the squad. This was ultimately turned around, but by that time he had lost interest and went into a field where people were more accepting. Make no mistake, racism is alive and well, even in mostly liberal areas like San Francisco region.

> Also, black GET AWAY with discrimination all of the time. I'll cite
you an example... a black guy I work with constantly said, "That was
mighty white of you" and would laugh. I knew he had a sense of
> humor about the whole whiny racial BS and I didn't think
> a whole lot of it. But other white people in the office did.
> And were totally shocked whenever they heard it.<

It will be a strange day when I think a joke among friends is discrimination (and it certainly sounds like he's joking to me). My friends and I joke all the time about these things, whether it's racial or political or lifestyle, and we do not discriminate against one

another :-| I hope you do not think this way.

You could even have the test on the computer, the computer than could grade your test(s) and as you pointed out issue your call sign on the spot. Then the computer could pop up what the store had in your price range. You would then press your selections and walk to the front of the store, pickup your license and equipment and head home ready to operate.

We could do the same thing from Mall kiosks to attract young people. This could be coupled with playstation rentals, beepers, and cell phones. A one stop communications and entertainment kiosk. ARRL could create a Sony playstation and gameboy cartridge to teach amateur radio, along with an amateur radio adventure that would require simulated contacts with DX countries to obtain clues to finish the game. Wow! I wish I had thought of that. The only problem is getting it by the old elitist hams that think you should learn a bunch of code and radio nonsense to gain what is rightfully yours because you want it..

I do not think there needs to be a new Amateur service, but I also think you are perhaps being a litle hard on the guys commercial and money connection etc. After all, it was Tandy Corporation that made the FRS proposal to the FCC..and Tandy is commercial for sure..(ie Rradio Shack)

I don't like this idea very much. The part that worries me is as you say, they "might pick up some extra sales from new hams". Without accusing any store or anyone of dishonesty, I think it's a bad idea for the test giver to have such an immediate and direct financial incentive to have the examinee pass.

Absolutely not!
All they provide is a place for goods to be traded and or sold. Why should it concern them? They sure do help to move plenty of porn around the country and the world. I know there are still MANY places right here in our own country where even viewing porn is illegal. Our country as a whole will be a much better place when you busybody assholes get a fucking life and stay the hell out of everyone else's affairs. if the sale of guns, porn, hacker shit, even your own personal info is just fine with you, then what fucking problem do you have with an "import" radio or and amplifier?
Your sir are a self-righteous scumbag lowlife!
WAKE THE FUCK UP AND LOOK AROUND YOU!

Money makes the world go-round. Methinks. And if you want to
get more young people in the hobby, I think you need the kind
of marketing muscle that Radio Shack can provide. And, I think the fraud
issue here is over-estimated. There's been fraud
in the testing system as it is. If you had big companies involved,
who had lawyers, they could snap the whip with the employees.
And, they'd be better positioned to enforce standards, than random
individuals. I think.

Just enact some fines for cheating. Hire a few people to go
around, and masquerade as applicants to keep the system clean. And,
open an office, that would handle reports of fraud, and then
investigate as a criminal matter. It'd probably be cleaner than
the current setup.

I have a Palamor TX 800 amp, it does well with a RCI 2950 radio with
variable power, asking 350.00 neg.
I also have 110 ft of Ron 25 tower, it is taken down and in sections.

1. You would LOVE to think the ham bands are similar to CB - e.g. RF
power wars, lawless chaos, no accountability, anything goes. Nope.
Sorry. Wrong.

2. You want CB to remain the forgotten shithole that "nobody cares
about" so you can sell linears. Ain't gonna happen. Note HR2346, eBay
ban, FCC busting sellers of illegal gear.

> 714 Sandpile,
> The Mad Dog wavin' good bye

Mad Dog,
It usually takes a while for all of us, only matters that
you get there, not how long it takes.
I disagree with your figures above. Thry these;

300/freq = wavelength in meters
300/wavelength in meters = frequency
984/freq(Mhz) = 1 wavelength in feet
492/freq(Mhz) = 1/2 wave length in feet
492 x velocity factor of feedline = electrical 1/2 wave length
246 x velocity factor of feedline = electrical 1/4 wave length

Not a whole lot of difference, but closer to the actual
measurements.
'Doc

This is a CB newsgroup. A For Sale ad for a "10 meter radio" has no
place here. And if it is illegally modified to cover 11 Meters then it
REALLY doesn't belong here.

That's real funny. Anyway QRZ has two listed - Richard C. Mc Collum (N0BK Extra), and a Richard H. Mc Collum (KF4JJO Technician). The search engine treats "McCollum" different from"Mc Collum", note the added space in the second name. Interesting that both have the year of birth listed as 1943. No bio info available for either one however.

Some of us like to punch in names, and call signs, to see what pops up, and that goes with call signs used on the air too. There have been a few that have been found posting using expired callsigns like they still had them, like I found some time back on the "policy" news group. Shame on that individual. He took some heat from the rest of the policy news group for a while, after I asked him to explain how that happened.

I heard your mother is entering the Miss TRANSEXUAL contest, and her
favorite part is the swimsuit competition, where she can show all the
hair
off, the hair that goes from her chest to her dick.

I'll tell you what Tim, my company has offices in central Texas, and I have a step brother who lives in the south east section of the state. How would you like me to look you up sometime, and stop by if I happen to be in the area, and talk about things over a brew?

Put a space between the Cs of my last name and a whole new world will open
up. That was the convention in the age of dinosaurs when I was licensed.

While we are on the subject, is KC8LDO a call sign or the number off a
boxcar?

I would suggest that you rethink that tact.

Did I miss out on the announcement where you had been appointed Usenet enforcer?

net protocol does not allow me to alter the headers on a thread I did not start. As I am not the author of this thread, you are addressing the wrong party.

I also note that your message was sent to all the newsgroups as well.

Message-ID: <94ih91$e02s0$1@ID-20128.news.dfncis.de>
Source record: 69965

Thats right neighbor, i slightly disagree with your Electrical 1/2wave
length formula in the fact that you need to divide the sum of 492xV.F. by
the F to get the correct figure:
492 x Velocity Factor / Frequency = electrical 1/2 wavelength
same thing for 1/4wave but use 246

The 2 other formulas you listed apply to vertical non-loaded antenna
lengths,here is a complete list:
full-wave=984 / F = length in feet
3/4wave=738 / F = ft.
5/8wave=615 / F = ft.
1/2wave=492 / F = ft.
1/4wave=246 / F = ft.

the saga continues, we will all sleep better when this coax thread
dies,whaddauthink?????

Hey Vooby, I was just wondering why you don't have your Ham ticket yet?
I realize that you claim that you are going to take all the tests one
day, and be an instant Extra(boy, wont the VE's have fun with him!), but
just think about this.......you could already have your Tech, and
become the hall monitor for your local 2-meter repeater! Think about all
those people you could bust for going 1 second past the 10 minute limit
without IDing! Bet you're already drooling, huh Voob? And you know
what.....there are Hams that use foul language and run more than the
legal limit(for slow learners like you, that's 1.5KW). Just think of the
fun that awaits you Voob!

Actually Voob, I used to run a rather nice 8 tube roto-tiller back in my
outlaw days! As I remember, it would do around 1.3KW, and till about a
foot deep, depending on the height that you dropped it from.

You want bio, good luck. The town I was born in was protected out of existence by the Corps of Engineers, the house I grew up in burned down (after we sold it), I have worked for Sperry-Rand, Interco, and Employers Insurance of Wausau (WI) none of which exist, and my grade school was torn down. You will have one hell of a time building a shrine to me.

You have found a rather unique facet of the hobby to explore. Anything beats code practice, eh?

Call Omaha information for my phone number, it's public as well. I is who and what I say I is.

didit.

The superstar wasn't the same. The board was the same silkscreen, but the radios where different.

It might use a single final board, they all had substandard voltage regulators in them, and the export Grant was a COMPLETELY different chassis.

Nice try, though.

Hrm

No, they don't

Anything capable of operation above (approximately) 15 meters is illegal.

Otherwise, Henry, Ameritron, et al would be allowed to run their export models in the US as well.

Also, it is a power gain problem.. They do allow some stuff to be built that will TX above 15 meters, but the power output can't be more than (I believe) 4 watts.. That was the reason the Texas Star CW transmitters where optimized at that level.. To pass FCC inspection.

> Here's my 2 cents on the subject.....eBay should have told the FCC to
> suck ass!

Then they would be able to be shut down, since they do business in the
United States, and as such,
are restricted to the laws of the US. Acting as an intermediary for an
illegal product is just
as illegal (if they have been told about it in the past) as doing the actual
transaction.

How you think they get the kids running drugs from the dopeman to the
customer.

They are just as dirty.

Being the pencilneck asshole SanFran organ suckers that they are
> it doesn't surprise me though. They have a long standing tradition of
ending
> auctions early for any reason they see "fit".

They end auctions because people inform them (either right or wrong) that
something
is "amiss" with the auction. Thats all their is too it. If the item
doesn't sell, they
don't make any money.... And that would mean that they wouldn't want to do
anything
that would distrupt the constant flow of income, wouldn't it?

> As for the whiney bunch of hambos' out there they can't even clean up
thier
> own shit......why worry about the CB band?

Because the morons on 11 meters are destroying it for all interested parties
in the RF
spectrum.

Got your msg. Will drop ya a line explaining what needs to be done about
the DNS tonight.

Now, to be fair, lets talk of the amateur operators (remember, I build amps for them) that
operate in the 11 meter freeband, or the ones that come into 11 meter CB band with their
Henry's, Alpha's, Ameritron's, etc. and run the legal 40 channel operators away because they
want that channel.

It goes both ways.. The 11 meter operators are sometimes a "lower" class of people, but to be
honest, some of the lowest trailer trash I have met has also had a ticket... As well as 4 cars on blocks,
and no job.

It takes all kinds in both radio services. But don't think that I won't put your ass in check when you
make wild comments like these.

You live in a dream world.

75 meters
2 meters in any metropolitan area.

75 meter Liberty Net is some of the most foul mouthed, threatening, lawless
ops I have
ever heard on ANY band. Hell, I would rather my children listen to (the
DaveMade running)
Howard Stern than listen to the "supposedly well off, well behaved" amateur
Clintonian liberals
on 75 meters.

And as for 2 meters in California. Channel 19 is tame in comparison.

You don't even have a ticket, moron.. Your not qualified to spout the
information you pretend
to know about.

>

I agree with you on this Aaron. The 11 meter band has gone too far. But, I
believe the hobbyists
should still be allowed to have a hobby.. The foul language and grounded
base amplifiers need
to be dealt with, though.

Marketing muscle? Is this from the same group of drooling no-loads I've encountered in almost every RadShack I've entered over the past several decades? These folks panic when a customer refuses to provide his name and address.

The people who are Radio Shack's customers seem to be from several distinct groups: a) those who need a part in a hurry and can't wait for delivery from a "1-800" house (I generally fall into this group), b) those who don't care about price, c) those who don't care about quality and d) those who are waiting for a spouse to finish shopping at the mall.

I don't think we need individuals who are incapable of identifying an electronic component administering amateur license testing.

Don't YOU guys ever give it a rest? All I ever see is in this NG is "big linear for sale", or "10 meter radio w/ mods" or "davemade beats skullcracka" or discussions about how to get more power or more channels or what illegal box beat the other illegal box at a keydown.

People are tired of YOUR "point" - yet you guys just keep on posting the same anti-legal boring crap CONSTANTLY. As soon as you give it a rest, so will I.

Aaron, I think you fell for a troll here. Lessee ... um, 12,000 watts input divided by 12 volts is um ... Ok, so he runs 36 volts on an alternator. I remember the time we had an 18 KVA transformer for 277/480 down to 120/208 in a multicell machine and the buyer wanted no more than 120 volts in a cabinet. I bent the conductors (cables, not conduit) with a HICKEY! I'd like to see how he got the alternators connected to a power supply for his 10,000 watts plus. My guess his either he is trolling or his brain is fried from too much RF. C'mon guys, you can invent more realistic numbers than that!

Toll Free,

Here is my point, and I will achieve it without personal insult or
partisan political references.

Amateurs at least TRY to clean up their act. CBers act like they either
don't care if their band is dirty - or they like it that way.

All 40 channels (and then some) of CB spectrum is an open sewer.
Conversely, spend a day listening to 10 meters. Or 17. You will be hard

pressed to locate any example of chaos, profanity or bad behavior. Go to any of the CW bands and monitor all day and all night, looking for any kind of misbehavior. I doubt you'll find any.

No one says idiots don't exist on ham radio. But it is nowhere near to the number of idiots on CB. Not even a fraction. And I take issue with anyone trying to portray the amateur bands as "the same as CB"

Train,

There are just as many "real men" on sideband as there are on am,
except for one major difference. The ones using sideband aren't
50 years behind the times when it comes to current technology.

We all know you won't belabor the point since we all know how much
more efficient ssb is for reliable, consistent communications in the
hf bands. But of course, when I listen to am stations "shooting skip"
I don't get the impression that they're interested in anything more
than just a little "posturing" and competition. For the amount of
power expended, or wasted as the case might be, ssb operators are way
ahead of the game. If your definition of a man is someone who holds
on to old, inefficient ways of doing things, I suppose all am operators
are men. By the same token, we ssb operators should be in awe of the
stalwart cw operator, as cw operation is an even more efficient way
to communicate, when getting the message through is the uppermost
priority, and so on and so on. Currently there are digital formats
that exceed the reliability of cw operation that are 20 - 30 times
more efficient still! Where will the men be? Given the same amount of
spectrum, (40 channels) there would be over three times more men on ssb
that on am if this allocation was filled to capacity at any given time.

Nostalgia is great fun, but it doesn't get the job done. I don't
think calling people who prefer ssb operation over am "pussies" is
going to intimidate anyone who wants to be on the cutting edge of
communications technology. The next time I'm smack-dab in the middle
of your favorite channel operating PSK31 digital mode with another
station 14,000 miles away, (completely undetected and unable to be
interferred with) I'll remember all of you who have been left behind in
the self-created "squalor" that dominates the bulk of am operation.

73,
NAO911/Jack

Now if you can convice the IRS you're dead, then you would have it made, no
more taxes to pay.

> You have found a rather unique facet of the hobby to explore.

Yup.

> Anything beats code practice, eh?

There are other things more interesting things to "practice" than code, and
not enough time in a day to do it in either. One most set priorities, and
code is right at the bottom of the list right now.

> Call Omaha information for my phone number, it's public as well.

So's mine.

4054. Re: FCC proposal for new Amateur "Colt" License Class

Newsgroup: rec.radio.cb
Date: 2001-01-23 03:32:46 UTC
From: City_Slicker <notenuftime@foolscorner.net>
Message-ID: <94iu0u$ioo@dispatch.concentric.net>
Source record: 70108
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.antenna,alt.radio.family,rec.radio.cb,rec.radio.amateur.digital.misc

For what ever reason this cross posting continues to be a problem usually stemming from the ham groups. You surely have control to which NG you direct your response to. It figures you would follow everyone off the cliff to adhere to protocol. Do you believe that anyone who is only interested in CB gives a rats @$$ about some new Brownie license to use a radio? This NG is CB no license, no policy etc. So why even post it here?

If I have to nominate myself as the enforcer of this group so be it others will support the cause. If the amateur NG would like all of the CB posts crossed to their NG it can begin immediately. You see it is like one guy turns on an amp then another then another and pretty soon the whole band is unusable. Is it time to see who's is bigger? Or can this just end and everyone take their posts where they belong?

Since I don't know the origins and really don't care to waste time researching I am posting back to all the groups so that no one can later say what happened and why. This thread being crossed to the CB group can be stopped if you want to. Or you can get prepared to read many more posts that don't pertain to your groups.

4059. Re: Coax Question

Newsgroup: rec.radio.cb
Date: 2001-01-23 04:06:18 UTC
From: Bill Nelson <billn@spock.peak.org>
Message-ID: <94ivvq$oh5$4@bashir.peak.org>
Source record: 70119

Handy Andy <CodysPC@iserve.net> wrote:
: Greetings!

: Good points.

: Then what we're looking at are really two issues wound up in one.

: One, the 1/2 wave length of coax in response to...[oh boy] a balanced
: load. Hopefully this is correct, and that means approx 12 feet.

: Second, the antenna and coax working together in an unbalanced system,
: where the coax is reactive to the antenna - and vi ca versa, the wire
: conductor length of the coax is similar to the antenna length as if it
: were a radiator. [Key word here for flamers *If*]

: Is the above correct?

Not totally. Even with a balanced system, rf currents can get on the
outside of the coax, either from leakage or from the coax picking up
rf from the signal radiated by the antenna.

In the first case, the SWR will be affected. In the second case, you
just have rf on the coax.

If you are looking at currents on the outside of the coax, then you
treat the coax as an antenna element.

If you are looking at currents inside the coax, then changing coax
length will NOT affect SWR.

: The reason why is this, the subject of necessary coax length and the
: antenna/coax length requirement are two issues that are bifurcated,
: they are one in the same but two separate principles.

: Makes for an interesting contemplation.

It certainly causes a lot of confusion.

'Doc <w5lz@oio.net> wrote:

: Mad Dog,
: It usually takes a while for all of us, only matters that
: you get there, not how long it takes.
: I disagree with your figures above. Thry these;

: 300/freq = wavelength in meters
: 300/wavelength in meters = frequency
: 984/freq(Mhz) = 1 wavelength in feet
: 492/freq(Mhz) = 1/2 wave length in feet
: 492 x velocity factor of feedline = electrical 1/2 wave length
: 246 x velocity factor of feedline = electrical 1/4 wave length
:
: Not a whole lot of difference, but closer to the actual
: measurements.

But still wrong for two.

300/f(in MHz) = wavelength in meters in a vacuum.
300/wavelength(in meters) = frequency in MHz

Sorry...a little defensive these days I guess. Yes, I am very familiar with
that situation. . LE asks for our help....you think we have a choice?
We simply provide the info....we're not cops, just normal people doing their
job.
And we have no say in what happens to the people that get caught.

So playing Lord High Ham and third-rate buttinsky IS a priority? Get it straight, Junior, a codeless ticket may get you a callsign long enough to be painted on a boxcar but it don't get you admitted to the fellowship and certainly does not grant the right to make judgements on anyone or anything.

You are an NCI member; I happen to agree -- for different reasons -- with that position. The difference is that I did my 20 to the satisfaction of the gimlet-eyed FCC lady so I have earned the right to have an opinion on the subject at all. You will never have the privlege: sorry 'bout that. So we are treated to half a paragraph of drivel on every post that, given one makes any sense of it at all, sure looks like whining to the casual observer.

I tend to use killfiles sparingly but you are trying my patience severely. Go download Morse University from http://ah0a.org and call me when you get a real ticket and actually put something on the air.

you need to get over Cookie Monster or #7 Both are running No Name in the gate. and what happends when the No Name suberan comes to the Muddrack, Everyone runs so they don't get there ass wipped buy it. so when you want to key get some money and call us out. I set up 4 keys with my truck and when they found out who i was everyone backed out of the key so if you want to key just let me know and i will be at the rack to do it
Mauldropper454 is clesr and gone

Hello All:

Thanks for all the e-mail from all over, about a dozen of them.

I will put another page together for all the inputs.

U know your your Linears ah Hummin when.....

When Ma come backs to the car in the parking lot from ah shopping at the
Super Market, and says: "Hon U is sounding lound and clear over the
markets PA System, just like the guy talkin bout the apples on sale,
just need to turn down the mike gain ah tad"

Thanks Dave.

Nah James, he didn't. The truth is that none of us are questioning IF one can bleed over anothers stereo. Hell, We all know that happens. What we were in effect stating was that it just didn't happen to lie boy over there. See, if you wanted, I could go back and dissect each and every post he ever made and show you what we are referring to. 86 OBVIOUS lies in less than thirty days and he was called on a minimum of a dozen by the captain and then he plays ostrich. The creature you refer to is the troll. Pay attention and you will see exactly what we mean. Don't say you weren't warned. Oh, and just for the record lie boy, TW and I are not the same people, no matter how many love letters you send under ANY name.

I have a Cherokee AH-100 and it seems the gel battery pack is dead. I know heard they don't make this radio any more. Does anyone have any suggestions as to where I can get a replacement battery pack, either gel or "aa" for this radio?

Actually, GooN8er, I don't want you going anyway. I enjoy watching you get brow beat. It's a really good thing to talk DX all day and know that thousands and thousands of transactions concerning things that damage your psyche are taking place all around you. It's become a game now, sort of like smacking the class monitor in the back of the head with a spitball when his back his turned and dealing under his stooge nose. I'm sure you can identify with this behavior. Isn't that what you expect from an illegal cber? (smirk)

Loud and Proud 1%er
(although last time I used that figure, someone corrected me and said that figure should run more around 80-90%.)

And here is my point without personal attack or political partisan reference.
1) You are a known liar.
2) Amateurs don't try to clean up anything. Did you never listen to 2 meters? Plus way more. Again, refer to no.1.
3) Why compare it to any other bands? You don't like it? You have stated so in many of your posts. Or were those lies, too? You're here. That makes you a troll. Nothing more.
4) You must take issue with yourself, but that's not surprising. That last statement wasn't even a decent cast.

He was in mine, too, but I had to unkill file him 'cause in some of the reposts it looked for a second like he was manipulating to attempt a desperate grab at gaining some credibility 'cause someone actually gave him the time of day and being the great 1%er that I am I shall not let this pass without great truth injected into the matter.

You can get the new version of the Chipswitch Operators Manual at:

http://kjv.homeip.net/~hr2510/html/chipswitch_information.phtml

Nicely formatted, searchable, indexed. Much better than the original manual shipped with the unit. Nicely laid out, easily readable tables, etc...

Very nicely done - If I do say so myself.

ENJOY!

Ummmm, excuse me.... But I fail to see ANYWHERE in Part 95 or Part 97
that states "once an individual has been issued their Amateur Radio
Operator's license, he/she at that time relinquishes any rights,
privileges, interest or authority to operate in the Citizen's Band
radio service." Perhaps you can cite section and paragraph for me?

Simply because I AM a Ham operator, that does not mean that I no
longer hold any interest in CB operating, of which I have over 22
years of my life invested. My status as a licensed amateur operator
has NO bearing at all on my interest in CB operating. Believe it or
not, but there ARE CB operators out there who desire to keep the hobby
legal, civil, and responsible. Obviously you aren't one of those
operators...

I don't entirely understand your comment. However I am politically
incorrect. And when it comes to masking or candy coating what I have to say
to prevent "hurting someones feelings" I say a spade is a spade. Hurt
feelings. HA! That's part of life! Self esteem... Eeee Gads man... If
someone is so insecure in themselves I say that perhaps the parents are at
fault, and I'm not going to beat around the bush. I have a chainsaw, and
that bush is gone! I don't tap dance around hurt feelings or someones self
esteem.

As far as your first paragraph, you totally missed the point.

Hmm.. Talks a lot but doesn't say much.

Oh dear, Dick. That post wasn't up to your usual high standards.

I can't paint but I know a nice painting when I see one.

I can't play the piano but I sure know a nice performance when I hear
one.

etc. etc.

So I don't need to pass a Morse test to know whether it should be
required or not :o)

Cheers,
MegHz

When illegal gayboy faggot keyclowns like Scottiekins piss and moan
that they are going to sue somebody over a website, but realize they
have no ability to do so. So after months of trying, they abandon the
quest to bother N8<because they also have no ability to do that>and put
him in the killfile. Gayboy Scottiekins, and his wives twistie and tnom
are just impotent blathering sissies who have surrendered to the forces
of legality. The faggin' dragons are now merely cooling corpses...LOL!!!

I bought a VR9000 and the channel mod is easy.
The radio is definatly low quality, It has been
having intermittent recieve problems that I
finaly fixed last night. Alot of cold solder
joints on the board and cheap components. I would
not buy another one but for the money it's an OK
deal, You get what you pay for I guess. I just
hope it lasts a couple of years.

4130. NEWSGROUP OF COMPLETE MORONS

Newsgroup: rec.radio.cb
Date: 2001-01-23 18:55:21 UTC
From: cbersrlosers@aol.com
Message-ID: <20010123135521.07320.00001150@ng-fc1.aol.com>
Source record: 70384

I have read many of the threads on this Newsgroup for the past couple of weeks and CANNOT BELIEVE the postings made by most of you, in-bread, petty, stupid little geeks!

It's not a wonder the "CB" hobby is looked upon by others as a hobby for low -life "mental midgets", all the bickering, slamming one another, POWER CRAZED MORONS that partcipate on here is UNREAL!!

People get a life, look in the mirror, grow up, realize how stupid you are, quit making a mockery of the hobby, there are a few/very few good operators out there that just get lost in all the bullshit. Most of you on here should be ashamed of yourselves.

Jeff Kirsch 101

From your remarks that description fits you to a Tee.

> Get it straight, Junior, a codeless ticket may get you a callsign long
enough to
> be painted on a boxcar

It gets me more than that, and that really seems to bug you. I hope it
continues to bug you. And if it was painted on a boxcar - great, just one
more way to bug you when you are waiting at the crossing gate and see that
boxcar go by. 8-))

> but it don't get you admitted to the fellowship and
> certainly does not grant the right to make judgements on anyone or
> anything.

I'm a member of the fellowship. Get use to it, if not, tuff - I still have
my license. Don't like my opinions, tuff again.

> You are an NCI member; I happen to agree -- for different reasons -- with
> that position. The difference is that I did my 20 to the satisfaction of
> the gimlet-eyed FCC lady so I have earned the right to have an opinion on
> the subject at all. You will never have the privlege: sorry 'bout that.

Nobody needs to pass a code test to have an opinion about it. Free speech is
still part of the US constitution last time I checked.

> So we are treated to half a paragraph of drivel

Which is YOUR opinion, a freedom which if you were given a free hand at,
would seek to remove from everyone who does not march to the beat of your
tiny drum.

> one makes any sense of it at all, sure looks like whining to the casual
> observer.

They only one "whining" Richard is you. You're whining because I am
exercising my right to express my opinion.

> I tend to use killfiles sparingly but you are trying my patience severely.

It's not my mission in life to go out of my way to make yours easy. You
have to take life as it comes, easy or not. How you take life is strictly up
to you.

> Go download Morse University from http://ah0a.org and call me when you get
> a real ticket and actually put something on the air.

Unfortunately years down the road, when Morse Code testing is but a dim
memory, somebody will pick another equally minor skill, and try to promote
it to the level of a Medal of Honor, to strut around wearing on one's chest,
like yours.

Cold!

This is not to make fun of anyone's political views. I just got this from a friend and thought it was funny.. You have entertained us with many humorous jokes and sayings, so here goes.....

A lesson in "SPIN"

Tipper Gore, an amateur genealogical researcher, discovered that her husband's great-great uncle, Chadsworth Gore, a fellow lacking in character, was hanged for horse stealing and train robbery in Tennessee in 1889. The only known photograph of Chadsworth Gore shows him standing on the gallows.

On the back of the picture is this inscription:
"Chadsworth Gore; horse thief, sent to Tennessee Prison 1885, escaped 1887, robbed the Tennessee Flyer six times. Caught by Pinkerton detectives, convicted and hanged in 1889."

After letting Al Gore and his staff of professional image consultants peruse the findings, they decided to crop Chadsworth's picture, scan it in as an enlarged image, and edit it with image processing software so that the biographical sketch was sent to the Associated Press as follows:

"Chadsworth Gore was a famous rancher in early Tennessee history. His business empire grew to include acquisition of valuable equestrian assets and intimate dealings with the Tennessee railroad. Beginning in 1883, he devoted several years to service at a government facility, finally taking leave to resume his dealings with the railroad. In 1887, he was a key player in a vital investigation run by the renowned Pinkerton Detective Agency. In 1889, Chadsworth Gore passed away during an important civic function held in his honor when the platform upon which he was standing collapsed."

And thus passed the very first "hanging Chad."

Hi guys,

I just installed a Uniden520XL radio with a Wilson FGT-4 antenna via a stake hole mount with a Truck Spec 12' Terminator cable. The best I can do on SWR readings is as follows: ch1=1.2 :1 , ch20=1.4:1 &ch40=2.2:1. This is after using the matching lead and removing the adjustable tip. Any ideas on how to get a grip on the SWRs. I would appreciate any help!

Always Be Happy.
Never Be Satisfied!

Sounds to me like the antenna is still to long, i noticed you removed the
tuning tip is it possible to shorten the antenna any more. If it is
top-loaded try snipping a 1/4" of wire at a time from the top of the antenna
until SWR falls to where you want it , which i assume is ch.19 or 27.185Mhz
.
If you cut too much , put the tuning tip back and readjust.
Good Luck, tell me what transpires.....

I picked up some police Motorola external speakers but am having trouble wiring it up. Apparently they are design to activate when the squelch comes on/off. So I presume that it needs some bias in order to turn it on. Does any one know how much voltage would work? I would like to have it biased all the time but I don't know how much voltage to apply.

Thers is a toltal of 5 wires,

- speaker
+ speaker

12 VDC-
12VDC+

SQUELCH WIRE

From: Mad Dog <lgssl@netzero.net>
Message-ID: <94l0of$dmkhk$1@ID-20128.news.dfncis.de>
Source record: 70225

Antron says the A99 should be used with the ground radials for peak performance , i am also aware that downward sloping radials change the impedance of some vertical antennas .
So my question is as follows: Does the A99 have a 50ohm impedance with-out the ground radials in place?
Someone (anonymous) told me that the tuning rings are the impedance matching device....
And another person (anonymous) told me that the impedance matching device is built in to the base of the antenna.
The SWR is 1.1-1 from 26.885-27.885Mhz.
I am not using ground-radials and the tuning rings are not on the antenna either,
what gives?????????

4173. RCI2950; poor receive

Newsgroup: rec.radio.cb
Date: 2001-01-23 22:38:50 UTC
From: Felix Dzerzhinsky <lindbert@NOSPAM.nb.ca>
Message-ID: <_Jnb6.2302$TR6.74470@sodalite.nbnet.nb.ca>
Source record: 70226

G'day. I am the somewhat less than impressed owner of an RCI 2950. The problem is the receiver. I cannot get any decent quality signal, whether in the ham or cb band. When I do get a signal, it seems that the transmitter needs to be nearly on top of me, or the channel needs to be ultra-quiet.

On the CB band, the reception is often garbled by nearby transmitters, even legal cb's transmitting a couple of channels up or down.

The radio was purchased after it had been "peaked and tuned", so i don't know how it was originally operating. The only thing done since had been reducing the transmit power down to 4 watts. The receiver was poor before dropping the rf, and doesn't seem to have been affected in any way. (though the tx clarity went up!)

Current antennas used are Wilson 2000 mirror-mounts in a co-phase rig. I have tried mirror-mount single with both the 2000, a 6 ft Wilson fiberglass, and even the stock Freightliner cheapie, with good SWR in all cases (below 1.4:1) . My current radio has excellent reception with the same co-phase rig, so I doubt the antenna system is at fault.

Any one know what can be done to this radio to drastically improve the reception? I don't really care about the transmitter, as I get no real complaints from those who hear me, and I don't intend to transmit off of the CB band. But I enjoy listening to the hams, and would like to improve the CB reception. Can I improve the receiver's sensitivity and selectivity both? Can I do so without drastically altering the radio further than has been already done? Has the tech who tweaked the radio screwed it up somehow? Or is the 2950 just not suited to the CB band?

Also wondering... would use of an Astatic mic further improve tx clarity, or is the stock mic good enough?

If you mean Morse as a testing criterion you are absolutely correct. If you mean treating the planet to a half-paragraph of condensed kraut as a tagline, that is another story entirely.
I get a little tired of drivel from bozos pontificating on a mode when they have never learned to copy their own call sign.

The end of Morse testing, and let there be no misunderstanding -- it will end, will in a number of respects destroy the glue that holds the hobby together. Whether it is a G3, a VE3, an N3, or a P31 I know the man (usually) subjected himself to a certain amount of sacrifice and humiliation to be on the air at all. Doesn't screen out bozos to be sure but we get a more serious bozo that way. The hobby will survive without it given adequate enforcement.

On other newsgroups, the Amateur fraternity is facing training a raft of 5wpm licensees who truly want to get to at least journeyman speed (about 16 wpm). It is almost painful to throttle down like that once having gotten there but most of us OTs remember our days learning and will do so. In a lot of respects that is a harder problem than nocoders cluttering the phone bands will be.

You are probably right, I did get a little more down and dirty than usual. Blame it on hearing the same rationalizations far too often. I have also become convinced that Leland Scott could get Mother Teresa to the nearest saloon for a mighty pissup.

oh come on ab, you are kidding right? i mean you were around a long
time ago and you know what. it hasn't changed a bit since then. it
might have got a little more shall we say disorganized but you know and
i know, the folks with the power were the ones that dictated what rinky
dinks did and when they did it. and things haven't changed that much in
that respect. the only thing that has changed is that with the
popularity of the internet, just about anyone can get whatever they
want if they have the green stamps, no questions asked. now in the old

days you had to serve your time kissing ass to get the 'opportunity' to get into the amp game unless you built them yourself. now with the proliferation of info available youngsters learn rapidly and they learn what power can do and they learn how to do it. and to perfectly honest, hamsters sell the very equipment that you loath so much, it seems, to the very people you don't like , pumping it up on 'your' airwaves. you are right that no one told you couldn't talk on a cb, but if you come here, don't bitch about the conditions. you are talking to the wrong people in one respect, and you are preaching to the choir in another. now i say if you go to the ham radio ng, and start talking this sort of thing up, even they will tell you to stick a sock in it. your diatribe sounds like sour grapes to me. if you are prevented from talking i am sure that as a ham radio extra, you can find a freq to hold your very important qso on. but i guess if you didn't have this to bitch about, i suppose the next thing you would do, is start, uhhhhhh, teaching us how we need to quit being cbers and pass our hamster tickets, rogo d.,.....cd is out....

Smarter then most, maybe! Has a long line of users? people in the know never needed the site in the first place? Makes more money selling parts to the smaller less known amp builders? never had a site of his own in the first place? Doesn't care for a link that will eventually become the noose around his neck? All of the above?

I don't have a No Name 16 pill, the one I was using belonged to # 7 in the Watergate and was rebuilt by some other crack pot builder, it was more then a joke, and if you want to put claim to that wrist cutting pice of crap then do it. when I talked to Dave about the way the 16 pills are tuned (so called tuned) from the famous No Name team, he agreed it may be a pice of art from So. MD by the way it was pumping out that killer 1600 bird on 18 volts. I think it would make a great driver for a 8 pill LOL

I have also been an avid CBer for years, starting back when a license
was still required, and as Vice President of the local REACT team as
well as District Coordinator for the Ohio State REACT Council, I to wish
to see this law enforced. Our Team gets calls every day from motorists,
but because of some power junkie running 2kw and splashing 15 channels
we can't respond. The same fools have even rendered the local
police/sherrifs radios inoperable. this also includes fire/rescue as
they have the same dispatch. This is inexcusable, possibly causing loss
of lives because of their childish stupidity. and when you politely ask
thjem to stol just long enough to let you respond to an emergency....
they crank the power up even more and turn down to 9 to give direct
assault instead of just the splash we had before.

Hi there,
just wondering if anyone can give me some opinions on antennas?
I am looking into buying a base antenna maybe the Anntron A99 or the
2000
Is there anything else that might work well
Can you give me any feed back on these two antennas or what you would
recommend?
Also wondering how well do the older aluminum 5/8 and .64 antennasa work
over these new ones that are made of fiberglass?
Thanks very much for any info you can give me!
Russ

My opinion is, I have never heard of fiberglass conducting anything.
Aluminum ground planes are the only way to go. Less TVI & RFI with much
better receive.

I guess I just get tired out of some of the same threads. I saw N8***'s web site. In it he claims over 99% of the stereo interference problems are caused by 'illegal CBers'. I think most folks who are involved in RF understand the problem is USUALLY a lack of radiated immunity by the various equipment (telephones, stereos, whatever). 5 watts can cause a problem in some cases if the other equipment is located in near proximity to the transmitter. I just wish this forum could be like Uncle Jim's board - UJ just got his tech license, there are a couple others with tech tickets, a couple with extra tickets, and a whole bunch of CBers - and we all get along fine. This took a little proding by UJ at one time who ultimately banned a couple of folks whose whole purpose in life appeared to be to flame the board with posts not unlike some of those we have seen on this ng. Once a couple of people were permanently banned, things have settled down, and now they're talking about having a big annual get-together for the denizens of the board! Heck, while a bunch of boards and ngs still are flaming, I suspect a bunch of us will be together having a few beers (hooters was voted out since families will be there) and having a ball!

>
> --
> 714 Sandpile,
> The Mad Dog wavin' good bye

I know from my 2 meter experience that a 5/8 wave should give you
a healthy 3db gain over a dipole. My two meter base antenna
was a colinear 5/8 wave (two 5/8 waves!) with a quater wave whip on top
of that. NOW that would be pretty damn big in the CB band but it gave me
9 db of gain on 2meters! Now a 3/4 wave may very likely be some kind of
colinear design but i don't know. All the high gain vertical
antennas concentrate the RF energy towards the horizion. If you
drive a normal car with your antenna mounted on your bumper you
will not get your signal out like a tower would. Quarter waves
are very omni and will put more signal up in the air which might
get you out of an RF hole. But with ony 4 watts of AM this may not
help. A friends said they prefered using a 2 meter quater waves with
50 watts of FM. You might need a more powerfull radio. But this
is all part of the game. Double halfwave antennas might be the way to go
for mobile operation if you want to keep length to a reasonable level. But
you still need the proper phasing space.

Reid

Either go buy or borrow all three antennas, mount them on your car, and test each one to see for yourself how well they perform. then you can make an educated decision on which one is right for you.

Dont give up on the 2950 Felix, it makes a fine 11meter rig.
The receive possibly got turned down inside the radio and/or the radio needs to be aligned by a competent technician.
2950's are famous for "front end overload", which means the receiver is so sensitive that incoming signals from a relatively close or high-powered transmitter can become garbled and unreadable.
Once your 2950 is tuned correctly you most likely will have to keep the RF gain turned almost completely down to keep incoming signals from overloading the receive side.
I am overwhelmed with the receive in my 2950 to the point that i may have it modified so its not as sensitive as it is, then again i like hearing "papa smurf" at the Petro down in El Paso over my loudspeaker all the way up in Bangor,Mn.
My 2950 is highly modified, 5 yrs. old, and i still would not trade for 2 new DX99's.
The Astatic 636L is my mic. of choice for the 2950 because of its crystal clear audio reproduction and noise-cancelling features.
I have several 2950 links with mods and tech info, let me know if you want them.

Greetings!

I hear that Skywave amps make good wheelchocks.

Would come in handy when you have to change a tire on the side of the
road someday.

Ever try to use "every ounce of your strength" just to keep the car
from rolling away from you when the E-brake is frozen and unuseable?

On Mon, 22 Jan 2001 19:12:05 GMT, while the modem was ice fishing with
the Mouse, Mr. Aaron H. Voobner <aaronvoobner@my-deja.com> dissertated
the following:

I have read some great stuff about the IMAX 2000
It is a 5/8wave off-center fed design that doesnt require ground radials
The Antron99 is a 1/2wave end-fed design that does require ground radials
The IMAX 2000 costs twice as much, but i feel its a better choice, plus the
radiation pattern is more suited to ground-wave propagation.
But when it comes to sky-wave propagation i will have to wait until i get
one to see if it does better than my DXland 99.
I live in Florida and have crystal clear conversations with Canada and other
places when conditions permit.
As soon as the bills are paid i will try the new IMAX 2000........

To Aaron.
Aaron, as much as i agree with you in that people should abide by the rules, I also honestly believe that your ranting here isn;t going to solve things. It's fine to state your ideas one time, and then to reply to a response ect to redefine your point. I am saying this respecfully not trying to start any further flame wars ect, and Aaron I honestly believe it is time to practice what you preach and I quote > NOTE: The rights of individuals to express opinions in favor of breaking
> FCC Law is protected under the Constitution, as are the rights of those
> who express opinions in opposition to these individuals.
this means the freedom of speech. many men and women (USS COLE) have given their lives to defend the constitution and what it stands for.

To the WHOLE group:

I am CBer and have been for years and I am in the proccess of getting my tech plus license. this whole ham vs. cb crap is getting rediculous. This group is NOT about ham vs. cb, it is not about legal vs. illegal. It is a question and answer group, to further the use and knowledge of the CB band and usage in general. I know many HAM operators that cut their teeth on CB, they still enjoy talking on CB. And there is nothing wrong with being a HAM either, before the restructuring of the license, it took a lot of effort to learn the theory and code to advance to higher classes of license, and it STILL takes effort. that effort should

be rewarded AND respected. would you let someone perform major surgery on you when all they had was a first aid course? Well CB is like the first aid course. getting a ham ticket is graduationg medical school as a MD.

To end, lets stop all the bickering and get back to whats fun about radio communication..... COMMUNICATION, I.E. exchance of ideas in a mutually beneficial fashion. getting to know each other sharing ideas and information.

Greetings!

Have used; the F/S Tuneable tip II 5/8w 5 footer, F/S KW7, Francis Amazer, Wheeler Dealer, both 8 footers, Hot-Rod 5 1/2foot.

Opinions? All perform well for QRP [Low power mobile] - however, the only gains I've noticed was on receiver gain. All the stations I deal with are located 35 ~ 45 miles away.

The best results are obtained in transmit side, if it matters, with the longer antennas - the ones I prefer to use the most and have has the best receiver gain from, is the F/S KW7 - 7footer and the Francis Amazer/Wheeler Dealer CB-28. These can establish reliable contacts for longer distances on a Chevy Tracker - with the antenna mounted on the roof pillar of the convertible.

Compared to the 1/4 Wave? The 1/4 wave has less receive - and capable of picking up more noise than the others listed above. The 1/4 wave whip used was a typical 1/4 wave Stainless Steel type on the same mount. Did far better than the Francis Hot-Rod 5 1/2 footer, but as with any antenna, you do get the Tree-trimmer accessory whether you want it or not.

The typical SWR on the 1/4 wave whip was between 1.4 to 1.2 SWR on channel 20.

As far as receiver performance, I'm considering a series of issues, actual S-meter, Noise, and SWR control.

Just about anything as long or in length close to the 1/4 wave whip with have a better receive than say the Francis line of shorter antennas like the Rooster, Hot-rods or Tweeter. 3 foot or 5 1/2 foot long antennas, or the Firestik models like the 5' FS II tunable tip.

What about - while moving? A different story - into the danger levels of 2.3 to 2.7 at freeway speeds on the 1/4 wave. These responses are why I've changed to other antenna brands to try them for SWR control while traveling.

The antennas above, with the exception of the F/S KW7, showed far lower changes in SWR readings while driving. The only way to offset the KW7 was to adjust the tuning to a higher SWR on channel 1 when stopped, and will actually lower the SWR as you drive. [Whack of wind bending the antenna] When the KW 7 was tuned to 1.7SWR on channel 1 the SWR on 40 was about 1.4, but while in transit - the SWR was nearly flat 1 at highway speeds on all regular 40.

The Francis CB-28 and Amazer run about 1.3 to 1.2 at highway speeds
and show 1.3 - 1.4 SWR when the vehicle is at a standstill. Quite
acceptable.

None of the above antennas were trimmed for SWR issues except the KW7
from Firestik. Didn't have to make any changes to the Francis line I
have.

Which brings up a good point.

The location of the antenna will play a major role in how the world
with hear and work it. If you don't put it in the positions it wants
to use [the antenna] you might as well be using a dummy load to try
and talk to them.

Another factor is how well they handle bad weather and moisture, the
1/4 wave is less likely to balk at stuff on the element, but the
Amazer and Wheeler dealer have held up with flying colors - the only
thing that bothers them is ice. The FS KW7 is too heavy to use when
you have freezing drizzle around. It can collect ice up to an inch
thick and makes a wonderful racket when the ice breaks off - a cheap
thrill to wake up passengers.

Not a problem, James. I agree that most are logically informed as to certain degrees of what havoc RF can wreak. Hell, most of us have found solace in another group and alot is going on behind the scenes in email as far as real deals and buys and the latest news and such. When the rats are running through the house, sometime it's cheaper to crash somewhere else for a few nights while the rats self destruct than it is to hire pest control.

Sorry Doc,

I don't see too much talk of communication going on here. Just tips and bragging about how to get more watts and more channels and beat out and squash the other guy.

Of course I agree people have the Constitutional right to brag about crushing mud ducks and splattering the band and strut around advocating anti-social behavior on CB. I am not trying to stop them from posting this stuff, even though it is childish crap. I am simply exercising my right to post opposing views. That my views upset the proponents of illegal CB is too darn bad.

I have no respect for people that have no respect for other CB users. They certainly do not respect the rights of others. And as far as these folks being potential ham operators, what makes you think guys who routinely break CB laws will obey amateur regs? Or any regs at all? The worst of them have openly posted thier distaste for amateurs and a dislike of "rules". If this is who you are defending, shame on you.

Sincerely,

Aaron Voobner

I can tell you that REACT is far from useless, but REACT is changing with the times, no longer do they just monitor the cb, they are also monitoring FRS, GMRS, ham bands (and they are licensed), REACT also does more than just monitoring for emergencies, they provide radio communications and traffic direction for public events such as parades, festivals, they also provide emregency communications in disasters in support of the American Red Cross. REACT also host "Safety Wake Breaks" on holiday week-ends along the highways. REACT has also won the President's Volunteer Action Award.

Source record: 70180

ok hopefully someone will have some time between all the bickering to
give me sone input on this.

Situation:
We have a 20 ft. camper trailer we are using as a mobile command
post/communications center in a disaster or public service situation.

Problem:
We are wondering if we can improve our performance with better antenna
ect.
We are using a Uniden Washington Base it is stock with an Antron 99 base
ant. that is mounted on the stock antenna mast that is on the camper
trailer. During transport and storage the antenna is stored in a peice
of PVC pipe on the roof of the camper.

What we want to do is get the antenna up higher. we can put up a second
peice of mast pipe but the concern is this. the pipe there presently is
held by 2 hose clamps. so I have concerns about how much higher we can
go with the ant. because of the wind ect and worrying about those clamps
coming lose.

My idea, is to weld a plate to the back bumper of the trailer with a
post welded to it to put the pipe on and then make a bracket to mount
the pipe to the top of the trailer. but will this be enough to hold 2-3
sections of mast pipe? or will we need guide wires?

I know the simple solution (and very expensive) would be to get and
mount a collapsable tower to the back of the trailer. and rightn ow
keeping costs down is of the utmost importance as we are in the proccess
of completely upgrading our radio equiptment

Any suggestions would be greatly appreciated

>Odd they don't have a Ham radio sitting at the console
>> since they are much more superior than CB.
>>

It is not necessary for law enforcement to monitor the ham bands, nor (considering the large number of repeaters and simplex frequencies) is it practical.

Amateurs can contact authorities either by using an autopatch to make a telephone call, or by relaying through a third party.

On the other hand, it is quite common to find ham radio installations at the National Weather Service so the folks at the radar can get immediate confirmation of ground conditions from spotters. Amateur stations also are located at most Emergency Operation Centers at the state and county level. In disasters, it is common for the cellular network to fail or get overloaded. Hams provide the mobile communications necessary to keep messages flowing. In addition, they are available as a backup for "official" communications methods.

In these cases, frequencies are specified in advance so everyone knows "where to gather". And a lot of training takes place between "events".

Every Amateur position must be manned by an operator with the proper license class--regardless of the class of the station trustee and call sign. This further explains why the HP doesn't "have a Ham radio sitting at the console". It is not practical to have a licensed ham on duty around the clock at a Highway Patrol communications center. Nor is it necessary because of the previously-mentioned autopatch and third party relays.

Hope this answers the question.

Buckeye Web Design,
You have a few options. The best would be a nice
crank-up/fold-over tower (not an option, you said). How
about a fold-over pole? If you make a bracket at the
bottom, wouldn't take much to make one at the top of
the trailer to hold it.
You could always use a push-up-pole, guy it.

Russ,
Either of the antennas you spoke of should work well.
I'd get the 5/8 wave if I had the option.
About fibreglass antennas, they work as well as any
of the 'metal' antennas. The conducting element of a
fibreglass antenna is a wire/foil conductor inside the
antenna. As far as the electrical performance, they
work as well as any other antenna of the same 'type'.

: how to get a grip on the SWRs. I would appreciate any help!

As you can see from the SWR readings, the antenna is too long. This is
often due to either a bad ground (so the coax is acting as part of the
antenna) or the antenna being too close to the body of the vehicle.

This is not a simple question. If the antenna were mounted at the right
height above ground, then you might encounter a 50 ohm impedance. For a
random height, it could vary greatly.

On the other hand, it may not really matter much - except that you will
have better radiation efficiency when using the radials.

These are indeed proven antennas. But did you notice where 'Doc talks about the 'wire/foil conductor'? If I'm not mistaken, RF is DC current and DC electrons flow on the surface of the conductor. The difference is like water flowing through 2" pipe (aluminum antenna) and flowing through 1/2" pipe (fiberglass). I would much rather transmit off an aluminum pipe than aluminum foil.

Hi WebDoc,

My advice would be the same as 'Doc's: at least in similar ham projects
people tend to use crank-up towers made of aluminium tubes: they're not too

heavy and it only takes a little time to put up the antennas when you stop the vehicle. If, on the other hand, you wish to transmit while driving, I would recommend a Hustler-type car antenna. Of course you can build one yourself; I've made two verticals with top coils, wound on PVC tube. They work exactly as nicely as the Hustler, but cost only a fraction.

Most computer virsuses are geared a a certan operating system. This is why Linux has been mostly immune to viruses. Scanners don't have the smarts to get infected. As for cell phones. The computers that control the cell antenna's are more at risk then the phone it's self. There has been one Palm type virus that I know of.

In principle, a 5/8 vertical can have some gain, but in that case it
requires good radials, not the kind you would expect to find in a CB whip.
The angle of radiation is lower than that of a 1/4-wave vertical. In
general, I'd go for the 5/8 - it's pretty good, although not as broadband as
the quarter-wave. Also the height of the antenna is an important issue. Do
you have any limitations as to the height of the antenna used for CB
stations? In my country they're limited to under thirty meters.
Any help? 73, Gary, oh8mfh

We'll have to agree to disagree there. I think it'll survive just as
well/badly as it would have done otherwise.

> Whether it is a G3, a VE3, an N3, or a P31 I know the man

Exactly!

> but we get a more serious bozo that way.
Is that REALLY a good thing, ALL things considered?

> The hobby will survive without
> it given adequate enforcement.
What has a Morse test got to do with enforcement, given that statistics
have shown that a Morse test pass is NOT related to abiding by the
rules?

Hoof in mouth disease. Morse has nothing to do with enforcement of course, it's just a little harder to be a dangling hemmeroid with a key as opposed to a keyboard or a mike.

There are those who would like the world to be composed of 'people like us'; you call them Tories and we call them Republicans. Neither group is operating in reality. There is a real fear, and perhaps not totally unjustified given this newsgripe, of an invasion of barbarians. It is not so much a laddie initiation ritual although I can see how you arrive at this position as it is a way to keep the invasion to a ladylike belch. We do a similar thing with illegal immigration from Mexico; a 50 mile walk

thru the Arizona desert is the ritual. We have no interest in actually stopping illegals, jobs need tending. But it keeps the number of workers up and dependents down. I think the reduction to 5wpm has pretty well done in the idea of the barbarians at the gate but realistically, can you blame the herd from getting spooked given the collection of codeless twits that infest this newsgripe?

Dick

> Thanx for the replies......

In their full size versions the 3/4 vertical is probably the best. The 5/8 has in theory the lowest angle of radiation and can be matched with a coil tap at the price of having your coax as part of the antenna -- the 5/8 cannot be decoupled. Both have gain but just what value that gain serves in a mobile is open to question.

Just what might differentiate a loaded 3/4 from a loaded 1/4 escapes me at the moment. Perhaps like a lot of other things, not much more than the pricetag. Seems like a vast effort toward a half vast result.

Aren't you the ILLEGAL FAGGOY KEYCLOWN who said "somethig has to be done" about N8 the other day in the e-groups forum?

And hey, as far as "porn mongering" goes, ask your fellow ILLEGAL FAGGOT KEYCLOWN Scottiekins who started that shit. It is just that the "mean 'ole hammies" are better at it than you sissy little homo boys.

In fact, we are just better than you, period.

So kiss my ass, you hypocritical whine baby...You cant do SHIT about it, and none of you other ILLEGAL FAGGOT KEYCLOWNS can, either.

Why don't you queer boys call 1mangayboy back to this NG for some more insults? I am getting bored by you weak sisters.

Remember, ILLEGAL FAGGOT KEYCLOWN, YOU CANT DO SHIT ABOUT IT...HAHAHAHAHHAAHAHAHAHAHAHAHAHHHA!

> operating in reality. There is a real fear, and perhaps not totally
> unjustified given this newsgripe, of an invasion of barbarians.
I don't think any barbarians ARE eager to invade the amateur bands.
Just radio enthusiasts, and all are welcome IMHO. Anyone who *isn't*
a real enthusiast will hardly be bothering to set up a station.

> do a similar thing with illegal immigration from Mexico; a 50 mile
walk

Very humane, LOL

> can you blame the herd from getting spooked given the collection of
> codeless twits that infest this newsgripe?
I have learnt not to confuse this NG with on-air experiences, the two
are completely different. I think we should all try and learn this
distinction and REMEMBER it no matter what crud we end up reading.

> ... codeless twits ...
There are twits on both sides of the argument.

There are twits who spout the line "you just want something for
nothing". Although there are many of us who argue against complusory
Morse, you will in fact notice that calls for easier or scrapped
written tests are very seldom made. This shows, to my mind, that we are
NOT after something for nothing, just something for something relevant.
But anyway...

Cheers,
MegHz

I agree with both of you. Morse will be around for a long time to come, but make no mistake Meg, it WILL be dropped as an HF requirement. The writing is on the wall.

I would recommend a good isopole antenna. They are theoretically perfect radiators.

Hi QRM,

Funny how a simple thing like sending CW can inflate one's ego to the point where they feel everyone must been over and worship them. Once the CW test is gone, and the doom sayers find that their predictions fail to unfold, as they did with the restructuring last April, they will find something else to try to set themselves apart, and above others. Then it starts all over again, with the ego thing.

License classes, with the big egos that seem to be attached to some of them, I think have been the worst thing to have happened to Amateur Radio. Too many Hams use there license class as an ego booster, which does nothing more than foster an us-verses-them attitude among all license classes. I don't buy in to the ego thing with license classes, which seems to really bug some people. As far as I'm concerned license classes are nothing more than a measure of "personal" accomplishment, nothing more, and has nothing to do with the talents, abilities, or work ethic of others.

If there is anything which will destroy Amateur Radio, it's going to be the division among groups of Hams who feel for some reason or another that they are the elite. The real fear among the elitist group was restructuring, where the requirements where leveled out a little more. Other than CW, which is the current favored elitist badge of honor, the written tests are a joke. So I do understand why people, like Richard, feel the way they do. Once the CW tests are gone anybody who wants to spend a few hours studying the license manuals, yellow high lighting the answers in the book to commit to memory, can get the top ticket. What a blow to the ego that is going to be for some. With the current test requirements I'll bet even Richard can't tell what speed CW test a particular Ham tested at when only working them on the air outside of the CW sub bands. Given the scope of all of Amateur Radio CW is just one small part of the whole picture. There is life beyond CW, and some Hams can't figure that out yet.

>Send it for an alignment.

Sending it in for an alignment probably will NOT slove your problem.Most of the rci's with bad RX were not fooled with by somone but actually came from the factory like that. I used to know a site that sold pretty good filters for RX that you could get installed in your 2950, but i just cant remember, do some surfing and you will find many other people that have had the same problem with there 2950 RX, it is very common.

Greetings!

Radio Shack has a telescopic mast for antennas that can get you to a 36 foot height - and yes it will need guying. Shouldn't be a big problem and besides you'll need a method to ground the antenna for performance and safety reasons. You did say it was on a camper/trailer for emergency/disaster communications.

If you wish for something more "home made" use different size conduit to make your own telescopic type. The use of some cotter pins can help hold the sections up and take down will be easier. Use two cotter pins at right angles for approx 2 feet of distance the smaller pipe will slide down inside the larger diameter conduit to hold the sections in place.

A few sections of conduit - thick wall, can bear the load ok but it too will need guying. not a big deal if you or people around you have access to the pipe and hardware needed.

The concept of the base being welded to the bumper is good, but be sure to ground the antenna otherwise electrical shock may be present in the antenna if it's close to wires or during storms. Never know how well the ground can conduct the charge until its too late.

Some support will be needed so keep the cement blocks handy to stabilize the trailer so when people are rummaging around inside, they're not shaking the antenna apart. Even guyed, the mast can bend and break if too much tension is placed on the guy wires.

Hope this helps...good concept - I hope it works out.

On Tue, 23 Jan 2001 22:15:16 -0500, while the modem was ice fishing with the Mouse, Buckeye Web Design <arcweb@bnnorth.net> dissertated the following:

:+> ok hopefully someone will have some time between all the bickering to
:+> give me sone input on this.
:+>
:+> Situation:
:+> We have a 20 ft. camper trailer we are using as a mobile command
:+> post/communications center in a disaster or public service situation.
:+>
:+> Problem:
:+> We are wondering if we can improve our performance with better antenna
:+> ect.
:+> We are using a Uniden Washington Base it is stock with an Antron 99 base
:+> ant. that is mounted on the stock antenna mast that is on the camper

:+> trailer. During transport and storage the antenna is stored in a peice
:+> of PVC pipe on the roof of the camper.
:+>
:+> What we want to do is get the antenna up higher. we can put up a second
:+> peice of mast pipe but the concern is this. the pipe there presently is
:+> held by 2 hose clamps. so I have concerns about how much higher we can
:+> go with the ant. because of the wind ect and worrying about those clamps
:+> coming lose.
:+>
:+> My idea, is to weld a plate to the back bumper of the trailer with a
:+> post welded to it to put the pipe on and then make a bracket to mount
:+> the pipe to the top of the trailer. but will this be enough to hold 2-3
:+> sections of mast pipe? or will we need guide wires?
:+>
:+> I know the simple solution (and very expensive) would be to get and
:+> mount a collapsable tower to the back of the trailer. and rightn ow
:+> keeping costs down is of the utmost importance as we are in the proccess
:+> of completely upgrading our radio equiptment
:+>
:+> Any suggestions would be greatly appreciated

(pulling the 2950 out of the junk pile)

Thanks for the replies... now i can say for certain it's my particular rig, and not the type. Had high hopes when I bought this puppy, and didn't have it in the truck for two months before the crowbar came out and the Galaxy went back in... I'm going to take the offered advice and drop it off at a reputable shop when i pass by.

This isn't the first time aftermarket IF filters have been suggested as a way to improve the receiver's selectivity. Has anyone tried such a mod, and if so, what kind of luck are they having? A couple of hams have suggested installing 10Mhz crystal filters in both my 2950 and the Galaxy, even though the Galaxy is receiving well.. one insisted that neither radio had adequate filtering in the IF section.

Would it hurt? Would I lose some sensitivity? The hams claimed the operation wouldn't be difficult... but then they were also saying I should make my own filters... uh-uh... not gonna go there.

(Not yet, anyway...)

There was a used television truck that was rigged for remote broadcast last year that was on ebay that someone posted on here, if I remember correctly. Not that it can assist you in this particular quandry, but your post started me thinking of it, Andy, the second you mentioned guying it off. That truck (I did go to put in a bid) I think went for 2200 bucks. It had a collapsible 40 foot mast straight through the roof and as far as power and self-containment, it had generators and appeared to have some interesting capabilities. Wonder if anyone here knows anything about where it went.

The anti-keyclown league is forwarding EVERY bit of info we get!
if you post a link to a website that sells keyclown equipment, WE SEND
THE LINK TO THE FCC. You keyclowns will be shut down, WATCH and SEE!!!

OH goody he has focused attention on me.

As I said before; Am I the only one that reads his posts in the voice of Roger Rabbit?

<twistedhed@webtv.net> wrote in message news:18449-3A6EDCCD-9@storefull-127.iap.bryant.webtv.net...
Well, jeepers VooN8er, we KNEW that. You think you're giving us a revelation or something about yourself? Heheheh!

Question - I wonder how many different e-mail addresses and ISPs he
will go through before his is finally banned on a permanent basis?

73 from Rochester, NY
Jim

Nice try. Never ran illegal anything here. Look me up on QRZ.com
sometime, tech. The call is AA2QA. You may not believe it, but most
folks are running legal rigs. As far a keyclown, name a frequency and
I'll see if I can accomodate you on 'keying'. What's your favorite
speed? 30, 40, or 50 WPM?

Jim

Lower radiation angles mean further DX

5/8~ antenna has a lower radiation angle than a 1/2~

"Mad Dog" <lgssl@netzero.net> wrote in message
news:94la5b$dvpvn$1@ID-20128.news.dfncis.de...
I have read some great stuff about the IMAX 2000
It is a 5/8wave off-center fed design that doesnt require ground radials
The Antron99 is a 1/2wave end-fed design that does require ground radials
The IMAX 2000 costs twice as much, but i feel its a better choice, plus the
radiation pattern is more suited to ground-wave propagation.
But when it comes to sky-wave propagation i will have to wait until i get
one to see if it does better than my DXland 99.
I live in Florida and have crystal clear conversations with Canada and other
places when conditions permit.
As soon as the bills are paid i will try the new IMAX 2000........

I assume you are refering to GMRS, Amateur, or both? You don't need a
license to monitor, just to transmit.

From: curious_dan@my-deja.com
Message-ID: <94n38f$e84$1@nnrp1.deja.com>
Source record: 70311

well ,well, well. our hero janet reno, quietly left washington in her little red pick em up truck and returned home to the sand pile. what a deal and what damage this bitch caused while in office. let's count the ways shall we.

1. waco fiasco federal atf and fbi agents descend on a quiet religious compound, to, allegedly arrest david koresh, for federal firearms violations. tried to serve warrant, and result was 4 agents killed and 85 civilians dead. for what? there were no gun violations, no machine guns, no sex with children, no nothing. but they acted on a hunch perhaps? who knows. a disgusting episode in the administration of reno justice.

2. randy weaver. federal atf and fbi agents descend on a quiet mountain compound to arrest randy weaver on federal weapons vioations. it would appear that they entraped the old boy, on some bullshit charges about selling a under cover agent a sawed off shotgun. he refused to surrender and holed up in his mountain hideaway. agents surrounded the compound and weaver and his family knew they were on war footing. his son was out hunting one day with the family dog, they came upon a armed man on their property and the boy shot the guy who had not identified himself. the boy was trying to run back to the cabin and was shot and killed by another agent. the dog was killed for good measure. bull dike reno, oked killing anything that moved. a agent (who later fired shots at waco also) shot and killed weaver's wife who was pregnant with his child. a gross abuse of power? i think so. weaver went to prison, but won a small settlement from the government in court, which is a very small consolation. was there a better way to handle it? of course. welcome to the world of bull dike reno and her brand of justice.

3. bulldike reno refused to allow the creation of a special prosecutor to look into obvious lawbreaking by algore. our old buddy used the vp's office to solicit campaign contributions from the office of the vice president, which is inherently illegal. algore said there was no controlling legal authority. algore went to a buddhist temple in cali and collected funds, then said that he didn't know it was a fund raiser, which was a lie by his own admission in his emails which were seen by bulldike reno.

4. bulldike reno authorizes the ins to seize a small cuban boy from his relatives in miami, because , allegedly, his commi father wanted him back in cuba. what a bunch of bullshit, and a gross abuse of the powers of the state. armed attack on someone's home by federal agents just to steal a boy because clinton wanted to buttress his falling legacy to

make it look like he was trying to make peace with that commi bastard , fidel castro, the drug running bastard. what a deal, imagine that. the idiocy of it all. calling for a armed attack on a american citizen's house just because they didn't want to send their young relative back to communist cuba. my, my, it still pisses me off thinking about it. assholes running in there sticking submachine guns in people's faces and this bitch sitting up there controlling the strings.

so what a legacy our resident bull dike has left for herself. i hope she has a wonderful retirement. one day, she might slip and fall in her home. sure hope she lives out her time here, but she did make a lot of enemies and some of them don't live that far away from her. so to twist and all the wonderful cber's down in the sand pile i say, thanks , thanks a lot pal. i thought about this today while i am getting strapped for action, heading out to the park at this time , got some rf work to do. i will be aiming my beam system east, and i will not be cheating by using water twist old buddy. what you will hear is pure class c rf in all its glory,....i am gone to the long nose, see ya.....cd is out.....

Just cause he was getting his name called doesn't mean that the box is awesome.
He prbably had some awesome conditions. Or he's got a kick ass antenna setup.
Thats where its at anyway. The antennas not the box. Go do some homework you
have to be up early for school.

I have not been as coherent as I would like to have been. Perhaps it is the hour when I am still inhaling caffeine before going to work. The issue deserves more time than I have at 5 AM and certainly a more functioning brain. I think the issue has inherited more emotional loading on both sides than it deserves; I think you might even agree.

Dick

4313. What WAS going on 25 years ago?

The beginning of the CB BOOM, that's what ! It was a time when there were NO Mod. kits and CB shops & stores sprung up on almost every corner. Everyone had CB's, even the Hambos! What DO YOU remember from that year ('76) that stands out in CB History, so we don't have to be like Sam Cook? Dave!!!!!!!!!!!!!!!!!!!!!

4314. Re: COLD AS ICE--this one's for YOU!

Great! I Also heard that the Kennedy's were from Scotland, and that the ones from IREland were from a HORSE THIEF that went there to escape hanging in Scotland (the Dead Kennedys)!!!!!
Dave!!!!!!!!!!!!!!!

"Jerry Oxendine" <joxendi@bellsouth.net> wrote in message news:3A6DF06A.3150@bellsouth.net...
Cold!

This is not to make fun of anyone's political views. I just got this from a friend and thought it was funny.. You have entertained us with many humorous jokes and sayings, so here goes.....

A lesson in "SPIN"

Tipper Gore, an amateur genealogical researcher, discovered that her husband's great-great uncle, Chadsworth Gore, a fellow lacking in character, was hanged for horse stealing and train robbery in Tennessee in 1889. The only known photograph of Chadsworth Gore shows him standing on the gallows.

On the back of the picture is this inscription:
"Chadsworth Gore; horse thief, sent to Tennessee Prison 1885, escaped 1887, robbed the Tennessee Flyer six times. Caught by Pinkerton detectives, convicted and hanged in 1889."

After letting Al Gore and his staff of professional image consultants peruse the findings, they decided to crop Chadsworth's picture, scan it in as an enlarged image, and edit it with image processing software so that the biographical sketch was sent to the Associated Press as follows:

"Chadsworth Gore was a famous rancher in early Tennessee history. His business empire grew to include acquisition of valuable equestrian assets and intimate dealings with the Tennessee railroad. Beginning in 1883, he devoted several years to service at a government facility, finally taking leave to resume his dealings with the railroad. In 1887, he was a key player in a vital investigation run by the renowned Pinkerton Detective Agency. In 1889, Chadsworth Gore passed away during an important civic function held in his honor when the platform upon which he was standing collapsed."

And thus passed the very first "hanging Chad."

By 1976, there were folks modifying their rigs to 'slide' between channels; but everyone was having a ball. Back when I was very active in CB (1966), there were a ton of bunny hunts. When it was done, it was go for coffee - husbands, wives, even sometimes kids. No flames, no swearing. Of course, a lot has changed besides CB in the 35 years that have passed since 1966 - people beaten to death for driving to slowly (happened here in Rochester, NY, year or so ago. Since the guy died in the hospital from pneumonia, they couldn't make the big charges stick. I think the guy who beat him to death paid a big fine, got probation, and is still walking (and driving) the streets. A walking time bomb.) Come to think of it, I had my extra class ticket then - and had more fun with the CB! How about the rest of you folks?

Source record: 70323

Keydowns wreck the CB band for other people and are illegal. HR2346 was passed partly to help track down and stop people like you guys. The FCC has compelled eBay and others to stop listing amplifiers because of you guys. The laws, as written, prohibit the "hobby" you are engaged in. The entire US government is against your "sport".

Yet, you pretend that none of that even exists. You make up reasons why its OK to do what you are doing. You persist in living in a total fantasy world.

And worst of all, you exist because other CBers tolerate you.

I will not.

Fact: High-powered CB signals wreck the CB band for other people.

Fact: Keydowns are illegal.

Fact: HR2346 was passed partly to help track down and stop people who engage in keydowns.

Fact: The FCC has compelled eBay and others to stop listing amplifiers because of keydowners activities on CB.

Fact: The FCC laws, as written, prohibit the "hobby" keydowners are engaged in.

Fact: The US government opposes the "sport" of keydowns.

Yet -- in the face of all the facts above -- keydowners continue to deny reality.

Worst of all, keydowners exist because other CBers tolerate them.

I will not.

By that I mean that the ones that monitor and respond are indeed licensed for GMRS and amateur. REACT above all stresses being legal, so if team members are not licensed for GMRS or amateur they may monitor but do not respond.

I myself do not have my amateur license yet but I am working on it, I have the theory down but the code is causing me problems, I am tone deaf and the freq range that I have problems hearing is the same range as the code, but I'll do my best. If I have to settle for a technicians class license I will but I will do it legally.

I have for sale on Ebay at no reserve this soldering station. Ebay item number is 1209865528. Its a great deal!!

Here is the link http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?MfcISAPICommand=ViewItem&item=1209865528

This new UTC 200HC (high capacity) is an ideal station for continuous production soldering. The soldering pencil uses a heater and sensor combination that allows for quick heat-up and recovery. ESD safe to protect sensitive components. Slim, comfortable hand piece - reduces operator fatigue. **Variable Temperature** **ESD Safe** **Precision Electronic Soldering** **Accurate Electronic Temperature Control** This has never been used.

Give me a break, Tim. You think that these guys run stock radios except
for one day every six months!? You think they would never test and
retest their "setups" from home? Get real.

Go listen to channel 6. Or 11. Or all 40 for that matter.

Hey ass, I'm a skip shooter and love it, I borrowed one of your piece of crap 16 pills and I'm not sure who was the last one in that box, and I used one of your drivers, and it produced a whooping 1600 bird watts, now I will talk on anything, If I have a 2 pill, I fight in DX, if there is a 16 pill laying around, I'll fight with that, but that doesn't change the fact that that was one of the worst performing 16 pills that I had ever seen. Ask you Master, I called him back then and asked him what was wrong with that anchor, and he couldn't tell me, even today, 7 offered me a razor sharp 6 pill to try and I had to turn him away because I was fresh out of bandages, and after the last episode I thought my HMO was going to back charge me for the office visits. Keep trying to make some sales, I sure you will find another new CB'er you can drain until he calls out for help. LOL

I'm sure that REACT wants its members to operate legally. I was just
confused from your post about whom was licensed. Thanks for clearing that
up.

> I myself do not have my amateur license yet but I am working on it, I

It's my understanding that if you do have a problem that reasonable
accommodations can be made for testing, such as using a lamp in place of an
audio tone. I would suggest that you ask some VE's (Volunteer Examiners) at
the local radio clubs what they can do for you along those lines. Most of
them are more than willing to help somebody with a handicap to pass the code
test. You have nothing to lose by asking. 8-)) Good luck.

While that is true, it sure has to be clear cut! I have read on the Ham news groups, where this topic has come up before, that some Hams are reluctant to do what you suggested Tim. Why? Because after the fact the FCC ends up second guessing your judgment you had to make quickly on the spot. Some Hams don't feel comfortable with the idea that the FCC may disagree with their choice, and then having to defend themselves. It's really a crappy situation to be in.

Not necessary - any kid ready to "experiment" should
be capable of passing the codeless tech, even if by rote
memory. My girlfriend knew nothing about radio, and it
took her 2 weeks with practice exams to earn a perfect
score.

>alt and battery he got his ass wipped again.and why is it that cookie monster
>is taking all you skip calls since you had to give that No Name 16pill back
>to
>it's owner
>
first off, LOL you are a funny guy.... Cookie? the only Cookie that is talking right now is in the north east corner and even if it is "your Cookie" don't ride on his coat tale, stand up and be the man yo daddy wants you to be and key that worldwide chevy up and do some talking for yourself, and I don't even run the bowl right now! I am just having too much fun kill'n the boyz on 26, 15 and 26835, BUT wait! I just had a news flash! how come you only talk about two people running NO Brains? are they the only ones that can get out of MD? and where is the rest of the GUNS? I never hear them calling any of your names...LOL I'll send you a DX directory so you can make some LL and ask the fellows in Texas who they hear (you will have to call the on the phone, because other then that they can't hear you) Peace and I'm going to the door!
your a funny guy!!! hey! and if I am such a mud duck, why are you still riding off my picture on your site, that was about the time I could't buy a round at the break, I showed up in Jacksonville showing 2300 bird on the meter in the 8 pill class, and flat was cut off in the 1st round by a stock Gold 8 pill out of NJ, But thank God I have repented from my lost ways, Oh and by the way, for the record..Stick is a real nice guy, and a good friend too me in the past, this is no reflection on him, but he could pick a better salesman who deals in something other then bashing

That was a long time ago. I remember having a little fun with the local Radio Shack store once in my youth. My brother went inside under the pretext of shopping for a base station. He proceeded to ask the store manager if he could try out the display model, which he of course he said OK because he wants to make a sale on a $200 radio. So my brother calls for a radio check, and I answer him from my mobile. I told him the radio sounded like crap, and I was having a hard time picking him out of the noise, of course none of that was true, the radio sounded fine. So he then proceeded to talk much louder in to the mic, and turned up the volume even more so the other two customers in the store, looking at CB stuff on the wall hooks, could hear. My brother then asked me for my 10-20, which I told him was in the trailer park, next to the shopping center, where the store was located. I was in the parking lot outside really. I then continued to remark about how bad the radio sounded, the low quality, and how the finals had a habit of burning out on all Radio Shack CB's. At that point the two customers in the store, looking at CB stuff and no doubt hearing everything, quickly and quietly departed the store without buying a thing. The store manager, from my brothers comments later, looked as if he was about to wrap the mic cord around his neck, and hang him with it. Some people just can't take a joke. 8-))

>Tim Kp82 Knight Patrol USA wrote:
>in a true life or death emrgency you can use any frequency, power, or mode
>without being having any liscence at all.
>

This is a common misconception. I am aware of several incidents where individuals transmitted on law enforcement frequencies, but I know of NO recent case where this was upheld as justified by the affected agency or the FCC.

Most of us would summon help any way we could if it truly was a life/death situation. If you feel it is and don't mind the consequences, than proceed in whatever manner you feel is necessary.

However, I can assure you from reading enforcement logs that the following have NOT been classified as sufficient emergencies:

*Auto Accidents, even where injuries are involved

*Illness, including heart attack

*Following a suspected criminal

*Reporting a fire

*Any situation where some other means of communications was available--even if not immediately.

On the other hand, I recall that no legal action was taken against the public in the following circumstances:

*A vessel on fire or sinking, where the estimated time remaining afloat was only a few hours, and where normal marine channels had been ineffective in summoning assistance

*A citizen who found a law enforcement officer unconscious or dead and who used the officer's radio to alert a dispatcher when other means of communication were not available

In these situations, communication on official channels was limited to that necessary to establish contact. And this does not guarantee that legal action would not be taken if you encounter something similar. I'm only relating what happened in prior isolated incidents.

Hopefully this amplifies the responses of others.

QRM

Tim what would you call the clowns who run poorly adjusted high power amps and overmodulated audio spouting sing-song gibberish? Are they keying down? And what about the clowns who yell "WORLDWIDE" into their overamped radios over and over again? Maybe N8 is right, we should call them ALL "keyclowns".

4396. Freebanders Chase Legal Users From 11M

Newsgroup: rec.radio.cb
Date: 2001-01-25 03:14:13 UTC
From: "Mr. Aaron H. Voobner" <aaronvoobner@my-deja.com>
Message-ID: <94o5lveqq1@nnrp1.deja.com>
Source record: 70599

Well, you freebanders are beginning to get international attention. And it's not the good kind of attention. This week's AMATEUR RADIO NEWSLINE presented without further comment, below.

-Aaron-

The search for HF intruders is on and the FCC assigns new channels for inter agency emergency communications. What will this mean for ham radio? We have a possible glimpse of the future on Newsline report number 1223.

Intruder Watch: Of sunspots And a CB Invasion?

Improved propagation on the spectrum above 20 MHz appears to be bringing a growing number of intruders into the 15 and 10 meter bands. Is it an invasion by unlicensed pirates or just more excursions by those who call themselves Freebanders?

Jeramy Boot, G4NJH, says one UK ham is going to find out: We should now be near the peak of sunspot cycle number 23. So far it has been rather disappointing, and certainly has not reached the heights of cycle 19 in 1959 or even the last cycle 22 which peaked around 1990 to 1991. Our sun is, of course, somewhat irregular in its behavior.

In spite of this, international broadcast stations have, during each of the past sunspot peaks, employed the 25670 to 26100 kHz 11 meter broadcast band. Strangely, during the present peak only three broadcasting stations have been heard using the band, and they have now given up.

At the present moment, the highest short- wave broadcast frequency in regular use appears to be by Deutsche Welle on 21840 kHz - way down in the 13 metre band. Furthermore, no Maritime stations are heard using their assignments from 25010 to 25070 kHz and 26100 to 26175 kHz. The Standard Time and Frequency Service has an allocation at 25 MHz, but it is believed that no use has been made of this frequency since the 1950s when WWV operated there with just 100 watts from Beltsville near Washington.

The question needs to be asked, "Just who is using the frequencies between 25 and 30 MHz?"

GB2RS News Manager, Gordon Adams, G3LEQ, has been monitoring this segment recently and regularly finds CB operators spreading from about 25600 to 28340 kHz, taking over the 11 metre broadcast band and the

lower portion of the 10 metre amateur band. Gordon would like to ask as many of our short wave listeners world-wide as possible whether they be radio amateurs or not, to let him know if they find these observations to be true. He may be contacted by voice mail or fax on 01 565 634 560 or by e-mail to:

gb2rs.news@cwcom.net

Jeramy Boot, G4NJH

If you plan to take part in this intruder watch and want to Call Gordon Adams, you will have to use the international dialing prefix 04411. Adams says that monitoring lists of stations in the segment from 25 to 30 MHz would be appreciated.

As I have pointed out in the past, there are many free ISPs and it is easy to obtain different e-mail addresses. I believe Doug made this point a few days ago. As an AT&T user, I am entitiled to (but do not use) up to 6 e-mail addresses. Were I to be banned from a newsgroup, I could reappear as a 'new' user. One can also use Juno (I have an account there, but deleted the software and only access my Juno e-mail through AT&T), Freelane by Excite (ditto this service for me), and other services. Unfortunately, there is no sanity requirement by ISPs for users. Apparently, his only joy in life is flaming the newsgroup.

Mr. Voobner,

Despite our differences in the past (over flaming the newsgroup, with which I don't agree) this post well deserves attention. The FCC, as we understand it today, is very limited in its' ability to enforce communications law. Also, as I have stated, if you want to know what is happening, watch where the money goes. If the hf problems cause international complaints, the FCC will have the ammunition to go to Congress for $$$$$$. If that happens, you can bet there will be some REAL bloodletting. How soon we forget. Years ago, the FCC maintained a pile of monitoring stations, and violators (amateur, cb, commercial) were immediately sent a ticket requiring a response. What happened next was determined by the offense and the response. Often, a good response (it was an accident and here is what I have done to correct it ...) would result in no action being taken. A second offense, or a less than adequate response would result in some REAL unpleasantries. Also, if there are international complaints, you can bet the FCC will NOT be likely to forgive a fine. This will be interesting to watch unfold.

Well that's good to hear. As you pointed out, where lives are at stake,
anything goes. At least the FCC had the good sense not to second guess the
guy on his choice of action. I don't have problem with it in this case
either.

I honestly doubt it. I suspect the trace is wrong, or both may use the same ISP ... In any event, N8*** uses language that I didn't use even in the US Navy whilst Aaron does not. Although I disagree with flaming the newsgroup, there is a BIG difference in the posts from N8 and Mr. Voobner. I did give Aaron a bit of a slam once and about the only thing he said was I was stretching things a bit ... As I stated, I do disagree with flaming the ng, but Mr. V. is a lot different than N8. Also, although I disagree with flaming the ng, Aaron has a very recent post on the ng that may well be newsworthy and not necessarily a flame. If, as stated in the post, the HFing is gaining international visibility, it does NOT bode well for the operators outside of the normal 40 channels. In any case, it helps no one to call names (especially such as N8 uses!) and tends to make everyone mistrust each other.

Nearly half the sedans here in Burlington, North Carolina seemed to have a
CB antenna by the late-70s.
The CB craze started with the fuel-crisis songConvoy, which exposed a
lot of people - beyond truckers and farmers, the traditional CBer, to CB for
the first time.
Now, almost no sedans here have CBs; the few pickups having it seem used for
hunting or farming.

Jeeze dude, I strike a nerve? You know, you need to calm down or your gonna have a stroke or something. I just started coming to this NG a while ago looking for info. I was even interested in Ham. But you have changed that. I'll stick with my CB. Which, by the way is completely legal. I don't run power. My realistic TRC-435 is out-o-the-box stock. No channels, tweaks, or mods of any kind. I never endorsed illegal anything, but that doesn't matter to you.

When it comes right down to it, the law is the law, and if you break the law, you are wrong. But those that are following the rules don't deserve the unkind, and sometimes disgusting things you post. You may not be illegal, but you aren't any better, either.
-Spike

I Dx Eleven <knightpatrol82@aol.comfckspam> wrote:
: whats the right height for 50 ohms?

That is not easy to answer. It depends on the free space impedance of the antenna. There may not be any height where the feedpoint impedance is 50 ohms.

If you mount the antenna with ground radials at least 1/2 wavelength above the actual ground - any effect the actual ground will have on the antenna feedpoint impedance will be relatively small.

Gary,
As others have recommended, use your 'filter' option!
You would be suprized at the difference in the 'disgust'
level that filtering of the garbage makes. Makes it much
more enjoyable to read this NG.

But Doc, when your news reader says 90 messages have not been downloaded and delivers 35 you both wonder what you are missing and wonder whether it is worth the effort as you add a few more to the filter.

Gary, a theoretically technical newsgroup is like two American lawyers in the locker room after a workout, the unstated purpose is to find out whose is bigger. If you actually say anything technical the tape measures come out. :-) It's easier to start with that premise and not discuss anything technical at all.

According to my understanding of the fcc reg's, any LICENSED operator can use any frequency his equiptment will boradcast on in the event of an emergency. Emergency in this case is defined as the loss or possible loss of life. The KEY part of this regulation is in the first part. licensed operator and his equipment. for an operator to be legal he has to use type accepted equipment so that previous statement is in effect self defeating. ok so I am not an amateur radio operator. I use cb that means I can on;y use the 40 channels alloted to cb, if I were a ham I could only use the frequencies I was allowed to use by the license I have. if I have a technicians class I can use 2 meter ect. that that license class is authorized to. providing the equipment itself is also legal.

I must apologize to all who I have had ill thoughts of. I believe all these mean CB'ers are simply due to the overwhelming number of foreigners being allowed to come into our country and puke on our airwaves with their gobbeldygoop foreign language.
In only four years, I encourage you all to vote for Big Ben for president. I promise no gun control, I will relegalize weed, and give free reign to anybody that takes out a foreigner. I will also do away with the government frequencies around the 11 meter band and have allocated channels for those of us that either don't need the big power or don't shoot skip.

Vote for Big Ben 2004!!

> ('76) that stands out in CB History, so we don't have to be like Sam Cook?

In 1976, there were all sorts of "mods" going on. You just didn't have the internet to read about it. The most common tricks that were done then were:

1. Filling in the "blank" spot on a 23 channel switch to pick up channel 22a (24).
2. Modifying the clarifier on SSB rigs to "slide" down 10 Khz, to get channels -1,3a,7a,11a,15a,19a, and 22b (25).
3. Reversing the synth crystals on a 23 channels rig allowing operation 455 khz above or below the CB band (depending on radio model), while receiving an image signal, all could receive and communicate.
4. Adding extra crystals or an external VFO for freebanding.

Amplifiers were very popular. You could buy them mail order at places like Henshaw's, and "Bennies". Popular amps then were mostly all tube type. Some more notable units were the D&A series, Maverick, Phantom and Warrior. The Palomar skipper 300, the "footwarmer/footlockers", the Thunderbolt 305, The Kris Boomer and Power Pump. For us "Mud Ducks", there was the ever populat ABC/Contex 6706, Courier BL-100, and D&A Raider.

The level of activity was greater than it is now, yet there was more civility and respect. There were very few anti-social types. Most people had a desire to communicate with other people. Most people respected other people's right to communicate, and although most people used "handles", they would usually stand by when someone made a call using FCC call letters. There were often personality clashes, that sometimes elevated to "channel wars". One of the longest lasting channel wars in my area was started over bleedover (a common occurance then).

The most popular radios came from (no surprize) Radio Shack and Lafayette. Other common brands, at the time, were Midlands, SBE, Royce, and Cobra. Some people ran Pierce Simpsons, or Hy-Gains and a few with deeper pockets ran Trams and Browning's. The top of the line CB base station was a toss up between the Tram D201 and the Browning Golden Eagle. With the Hy-Gain 623 running a close third, and the Cobra 135 a distant 4th. About this time, the Yaesu FT101 series started becoming popular with freebanders.

The Mike of choice was the D-104, but the Turner +2 and +3 were not far behind. A few ran Sidekicks, or off-brands, but they usually didn't sound as good.
There were no echo mikes, and the only commonly available "noise toy" was a "birdie".

The most popular antennas were the 5/8 wave ground plane. Radio Shack sold one, as did Hy-gain. Hustler and others also had a variation of the basic design. The A/S Starduster was also popular, as were the Hy-Gain Penetrator. The PDL-2 and the 3 element yagi were the most popular beams. There were some Moonraker 4's around, and there was one super laser 500 (That thing was 40' long!). There were also a few people running Super Scanners (combo omni/beam).

This was the last year of 23 channel operation. January 1st, 1977 ushered in the 40 channel radios. Many rumors flied about the 40 channels radios, prior to their release, about not being as "good" as the 23's were. There was speculation that the power was being dropped to 2.5 watts, the modulation was not as "loud" etc. It turned out that they were partially right. 40 channel radios did have to meet tougher type acceptance standards, which included a more sophisticated modulation limiter, which opened up a whole new business for screwdriver techs, who "clipped" them.

Looking back, I'd say that the newer 40 channel radios were much better in the receive department. Even bottom of the line Radio Shack 40 ch mobiles had better adjacent channel rejection than many of the "better" 23 channel radios did.

CB was much more fun then. There were clubs, Jamborees, fox hunts, Coffee breaks. REACT was a viable emergency service.

We had fun experimenting with radio, and we had fun just talking. We've played chess over the radio, put together some comedy skits and song parodies (Ala Dickie Goodman) involving the various locals (Some of which did not take kindly to the joke - see channel wars). We also bullied some people that just seemed the ask for it. It was a microcosm of life itself. That's why it disturbs me to see how CB has degraded over the years. It's not CB's fault, it's the moral character of people in general.

Anyone had tech problem with distorted sound when transmitting. Frequency measures OK, seems to be overmodulating. I believe VR5 controls modulation but has no affect. Have spent hours trying to diagnose. Any help greatly appreciated.

Pete Van Veen

Here is 1mangayboys newest survey results from his ILLEGAL FAGGOT KEYCLOWN web page. 1mangayboy wants to thank all the sweet little CBers who voted in the survey, especially Scottiekins, who voted for "fudgie taste" 193 times!

Do you wash your partners pee pee after anal sex and before giving head?

No, I like that fudgie taste, just like 1mangayboy does! 72%

Yes, I am a sissy! 13%

Sometimes, when I am not in a hurry. 4%

What does "wash" mean? I thought that's what head was for! 11%

Sure it is.
The people causing the trouble, posting under different names, cursing, assuming others identities and accusing them of homosexuality, brow beating and repeating, over and over, the same tired message are Hams, or in Boobie's case, a Ham wannabe.
Where the hell do you get off coming in here and making such ridiculous statements? You are part of the problem, not the solution, ya dork. Nice display of ignorance. The last time I saw such a display, George Wallace was standing in front of the University of Alabama.

Aluminim and Fiberglass are two different animals. Do not let anyone tell you they are similiar because they are not. There are many variables which contribute to the performance of an antenna but as a general statement go with a Aluminum antenna hands down.

One which I still have on my tower and will be taking down come the spring because I do not talk 11 meter any longer is a "Sirio 827". This is a very robust 5/8 wave vertical antenna that has outstanding performance. I purchased this about (2) years ago and believe me when I tell you it has withstood some serious Northeast weather and still looks great.

5/8 wave large diameter aluminum grounded properly is the way to go. GOOD LUCK in your quest.

You can quit reading and posting to this group. Don't say *we* unless you
mean yourself, Boobie and The N Word. In other words, get rid of yourself.
It's so much easier!

EVERYONE on here, except for a couple hams with a few brains are just total low-life losers, all your rap/hip-hop BS form of talking makes anyone with an IQ higher than their shoe size about want to vomit!

Just because you choose to operate on the "Children's Band", does it mean you have to get on the NG and show what a MORON you are?

And who is this " KNIGHT PATROL 82" jerk?? Just a prime example of what I am talking about.

Flame on "Chicken Banders"

See there you go again throwing out more BULLSHIT why don't you get all the facts before you talk it just makes you look like more of an ASS. No Name Does not buy all its parts from Dave the only thing No Name Buys from Dave is heat sink. No Name Buys amps cases from the same compeny that Dave Buys his but they don't but them from Dave. The Last Order of heat sink cases they bought was enough to make 800 boxes that was added to the stock they already had.There is more than one place to buy heat sink and outher parts but it makes sence to combine daves and No Names heat sink and case order togather the more they buy the better price they get. it's not a matter of they have to buy from Dave it just cost less to do so for both amp builders. So they can keep the price of there boxes down

Hello News group,

I've got an easy question, What is a KeyClown?

I guess I would understand some of these posts a little better if I new what one was. Seems like alot of bickering goes on here but just stopped on in.

I'm sorry, but FCC enforcement logs do not support this position. Fines have been levied and equipment confiscated for contacting law enforcement personnel directly on their frequency.

Funny you should mention his name. I was taking a road trip down to Mississippi, and drove through Alabama to get there. That was about 6 six years ago, and at that time they still had pictures of him hanging up in the visitors stations in the state. I understand he still is very well thought of down there to this day.

4470. ILLEGAL Davemade amps

Newsgroup: rec.radio.cb
Date: 2001-01-25 19:27:12 UTC
From: "Mr. Aaron H. Voobner" <aaronvoobner@my-deja.com>
Message-ID: <94pum2$v6f$1@nnrp1.deja.com>
Source record: 70479

This is the kind of crap I'm talking about. ls454ss70, wpbrock3rd, punisha, obviously talking shop about the illegal CB amp business. Since when is rec.radio.cb the private chat room for illegal activity? Their conversation has NOTHING to do with CB. It contributes nothing to the technical knowledge of the group. It is akin to a bunch of drug dealers swapping info on cell phones.

KEYCLOWN TEST:
1. Do you operate below 1 or above 40?
2. Do you use illegal radio equipment on 11 meters?<a radio that is not a 40 channel CB>
3. Do you work DX on 11 meters?
4. Do you use an amplifier on 11 meters?
5. Is your antenna height illegal?<the law is 20 feet above the highest point of your building>
If you answered yes to any of the above and want to know what a keyclown is, get a mirror!

Good points, Joe. Too bad they're lost on the individuals they're directed
to.
I have an SSB 140 also. Nice rig. Do you have any information on it? I
got mine from Ebay and could not be happier. Only trouble is it came with no
documentation.

Jeff

Hey isn't it illegal in the US to bait backdoor links to without prier warning of porn related materiel.
This hobby band radio board is read by people of all ages, you pervert criminal!
You should be ashamed of yourself !
If you are an amateur operator why do you have the most posts and interest in CB ?
Why not go back about your business *possibly* with the drunks on 3860, 3870 ?

I got sick of *most* these old farts on the Amateur HF bitching about everything,
"Who is the best ham" ...Kiss my ass !
What is this policing of Ebay and "rec.radio.cb" by retired drunks, and deranged intellectual sociopaths ?
I will have no part of it thank you.
4 watt Lafayette tube set and a stock Telsat SSB 140, Sure 55, Low pass filter and a scope
...ALL STOCK and enjoy it more !

Mrs Voobner,
I appreciate you taking the time to reply to my information request. However if you will take time to read it a little closer than you must have the first time, you will notice that I was requesting information on doing the modification and not asking for unsolicited (SPAM) legal advice. I realize that you are just another troll with a keyboard instead of a life, but spam is spam and it violates most ISP's and newsgroup's "terms of use policy". So I take it you do not care about laws and rules in general, just the ones you see as wrong. You are as bad or worse than all of the "criminals" you waste your pathetic little life annoying. I usually ignore your post as most others do, but you replied to mine this time and I just happened to have enough time at the moment to respond. Reply to this one or not if you wish, It does not matter to me as I am now going back to ignoring you.

My apoligies to any others who bothered to read this little waste of bandwidth, and I still need that mod if anyone can help.

Allen

If you like this NG as much as the rest of us who take the time to block unwanted trolls from appearing on our reader i suggest you take the time to do so, it makes viewing pleasureable.
I personally dont see any of kp82's posts anymore , just the replies directed to him from the selected others that i havent blocked.
This is a 11meter CB NG.
If you dont like what you see then go away or block the BS and profanity.
So far you appear to be a prime example of what you dislike.
(arent you the pot calling the kettle black)?????
I'm sure that i speak for everyone when i say that we will welcome you with open arms if you post
related information without profanity and hatred directed towards people just like yourself.
Since you appear to hate CBers so much, my guess is that your a ham like a majority of us.
If this is so,which i dont feel it is because a true Ham has respect for all forms of communication
including the internet (data).
Change your ways and join us
or dont and i will continue to block you from my reader,as will the other respectable people who choose to post here.......Copy,Paste,Click,Adios MF (microfarad)

Yeah Spike, but you forget one thing...I am not only calm, I am
grinning ear to ear when you whine like that. I am upset about nothing,
hate no one, wish ill on anyone, or anything like that at all. This NG
has threatened to shoot my pets, rape my daughter and wife, and a host
of other things. I have these threats on record. Never, not once, have
I threatened anyone. You wanna "calm me down", huh? If by that you mean
getting me to quit posting on here, good luck fella. Bigger assholes
than you tried, and they ALL went the way of the purple goose.
Dont like it? Hey, dont read my posts.

>
You are correct in that situation because they as the control operatoir are
present. BUT if there is no control operator present you can not legally use
the radio read the fcc guidlines it states that you are allowed to use ONLY
the frequencies your licens designates in an emergency.

4520. FAKE POSTING BY SOMEONE CLAIMING TO BE N8WWM

Newsgroup: rec.radio.cb
Date: 2001-01-25 22:20:15 UTC
From: "www.kp82.com" <kp82@my-deja.com>
Message-ID: <94q8qm$9fh$1@nnrp1.deja.com>
Source record: 70425
Cross-posted to: rec.radio.amateur.policy,rec.radio.cb

This is not true. N8WWM the poster is NOT N8WWM the person.
To prove this, I propose a test. At QRZ.com there is a page for every
member that you can put personal information on. The REAL N8WWM will
change the page by putting a new first sentence in. Go there now to see
the original page. I challenge the fake n8wwm@my-deja.com or
N8WWM@yahoo.com to do that. Of course it will be impossible. If you
email n8wwm@arrl.net, within 24 hours of 2200Zulu on 1-25-01, the REAL
N8WWM will send you the exact wording of what that first sentence will
be. AFTER 2200Z on 1-26-01 the this address right here will post the
sentence change in the profile on QRZ.
The ONLY valid address for N8WWM that has his callsign in it is
N8WWM@arrl.net. The FAKE N8WWM can't change that.

The real N8WWM will change the first sentence in his personal information at QRZ.com 24 hours from now. The FAKE n8wwm@yahoo.com and the FAKE n8wwm@my-deja.com of course cannot know what that change will be.
Email N8WWM@arrl.net to get the exact words that will be inserted into the qrz.com profile. N8WWM will email the exact words to anyone who asks for it within 24 hours of 2200Zulu on 1-25-01. The change will be made on QRZ after that time on 1-26-01. Immediately before the change you will get your email with the text of the new sentence from the address cbersarelosers@my-deja.com.
For some reason, N8WWM's call has been fraudulently "bootlegged" on the internet. Why didn't the moron bootleg an extra class call?

I said this when this first went down, I did not think anyone would use there own call sign and act like a complete fool as n8wmm fist did. I am also willing to bet as stated before that voobner and this "mystery" person are indeed one in the same. it is to easy go to qrz pick a call sign then go to AOL and try and create the screen name hopefully the owner of the call sign isn't using AOL otherwise the name is taken by them. Now you have your official ham looking rec.radio.CB troll account set up and you need to be out of work to be able to post all day long and to make up stupid web pages about all the character in the group.

James,

While I certainly do not condone N8's flood-posting and questionable
language, I wonder why we have never seen any "outrage" regarding the
postings of his numerous opponents (which sink to an equal or greater
level of depravity). Of course it is a classic chicken-and-egg
proposition. But which came first? One notable example is an early
threat by someone on this NG to rape N8's wife, shoot his dog, and burn
down his house. You would think the NG regulars (who now act shocked and
offended by N8's retaliatory shenanigans) would have spoken out against
such an act. But they didn't. They signaled thier approval and support
by "cheering on" the threatening poster, and escalating the level of
their own threats. Again, I don't condone N8's disruption of legal and
illegal threads alike. But the only difference I can see between N8 and
his opponents - is their choice of profanities.

Fortunately you can be more selective here. If everyone would stay on the thread, radios antennas amps etc and not be sucked in by the flamers and trolls as well as cultivate your kill file . It can get better the biggest thin is to ignore them fist and defend when necessary. We can clean up this neighborhood.

"Big Ben" <bajaben@pacifier.com> wrote in message news:3a702c16_2@news.pacifier.com...
I must apologize to all who I have had ill thoughts of. I believe all these mean CB'ers are simply due to the overwhelming number of foreigners being allowed to come into our country and puke on our airwaves with their gobbeldygoop foreign language.
In only four years, I encourage you all to vote for Big Ben for president. I promise no gun control, I will relegalize weed, and give free reign to anybody that takes out a foreigner. I will also do away with the government frequencies around the 11 meter band and have allocated channels for those of us that either don't need the big power or don't shoot skip.

Vote for Big Ben 2004!!

4546. Re: Any Freq. for Emergency? (was: REACT Useless?)

Newsgroup: rec.radio.cb
Date: 2001-01-25 23:26:45 UTC
From: qrm2000@aol.com
Message-ID: <20010125182645.05764.00000733@ng-de1.aol.com>
Source record: 70549

Rather than making blanket generalizations, let's put some specific examples on the table:

HIGHLY LIKELY YOU WILL BE IN TROUBLE:
*Using any radio to access the frequencies of a law enforcement agency, fire department, military/Coast Guard/National Guard or civilian rescue service, regardless of the nature of the emergency.
*Using any radio beyond your normal authorization when other means of communications are available.

LIKELY TO BE TOLERATED (only for the duration of the emergency)
*Using a ham radio to get assistance underway.
*Using freeband frequencies (gasp!) to assist a maritime mobile station in distress.
*Transmitting on 11-Meters or FRS with more power than authorized in order to overcome interference on the channel.
*Using GMRS without a license

And now, a fine example of what NOT to do:

A woman called "Please help me!" over a two meter amateur repeater. She had car trouble and needed someone to contact her husband. (He was a ham; she was not. She was using his radio in her car).

After getting a telephone number from the woman, an operator at a base station phoned her husband at work. He came on the air and determined his wife's location and the nature of the problem. (No emergency; just car trouble). He told her he would leave work and come to get her right away.

A few minutes later, he made contact with her again on 2 meters and let her know he was enroute. The two of them then began a conversation related to what they would have for supper and who was going to drop the kid(s) off at school tomorrow.

The repeater trustee intervened, saying, "Folks, we allowed contact with an unlicensed station for the purpose of getting assistance. This conversation has gone beyond what is necessary and is more than I wish to defend if questioned by the FCC."

Hello All: Look over at rec.radio.amateur.misc, Our buddy N8 or who every he is, has posted a posting that isn't getting a lot of good press, or replies.

Take ah look.

You can't buy entertainment like this!

Jay in the Mojave

Subject: thanks to the illegal keyclowns
Date: Thu, 25 Jan 2001 17:47:35 GMT
From: N8WWM@yahoo.com
Organization: Deja.com
Newsgroups: rec.radio.amateur.misc

I am now escalating my enforcement against llegal radio operators. If you are an amateur or a keyclown (illegal cber) it doesn't matter I will turn your asz in. I can not in good faith continue a campaign of decency while we have illegals in our own ranks. Be warned. I will not tolerate illegal equipment or operators among us. Thank the illegal keyclowns in rec.radio.cb

4552. 667 hook up

Newsgroup: rec.radio.cb
Date: 2001-01-25 23:37:09 UTC
From: City_Slicker <notenuftime@foolscorner.net>
Message-ID: <94qdb5$k00@dispatch.concentric.net>
Source record: 70553

I have a 667 collecting dust and would like to hook it up in my Ford Aerostar. Any suggestions on properly powering it. I really don't want to invest in additional Alt and brackets since I don't keep my vehicles long=enough to make it worth while. The amp on the bench into a dummy peaks at 800 watts on high draws approx. 70 amps. I not interested in opinions regarding my output and efficiencies it does what it does.

If more people would keep cultivating the killfile and stop responding to
the BS it will be fun to sit on the front porch again.

4556. Re: RCI2950DX mods

Newsgroup: rec.radio.cb
Date: 2001-01-25 23:41:45 UTC
From: Allen
Message-ID: <3a70b3e4.5058943@news.mindspring.com>
Source record: 70558

Well...maybe one last response concerning voobner.
Has anyone bothered to inform voobner that he is accessing this group from the World Wide Web and the FCC whose rules and regulations he refers to is a U.S organization.
As for "what this group is intended for and not, here is a quote from the group FAQ wich can be found at http://www.conk.com/world/kd6tas/cbfaq5.htm:

<<<<<<"However--and this is very important--when it comes to discussing operating practices on CB, please do not comment unless you are an active CBer. When a ham comes to 27MHz to operate, he "checks his license at the door" and operates on the same basis as everyone else--a Citizen. The same is true when you choose to visit the NG.

Specifically, we already know:
1. Amplifiers and radio modifications are illegal.
2. Freebanding (operating outside the assigned CB Band) is illegal.
3. There is language on CB which is rude and crude.
4. Some people splatter across several channels.
5. Going above 28.0 MHz will get us plenty of unwanted attention.

One more tip: Before jumping into a discussion, take a few minutes to read the thread. You often will discover that someone else already has given the same answer, or you will be alerted that the original poster was a Troll and you can avoid taking the bait. ">>>>>> (wich I will do from now on.)

So as many have said before I'm sure, voobners posts are unwanted spam and as I said before this makes him a hypocrite no better than those whom he attacks.

Now..back to ignoring the idiot...
My apoligies again to the rest.

Allen

City Slicker,
Hook it up using adequate size cable, and let'er
rip. If your electrical system is capable of supplying
70 amps as you said it drew, it should work fine. Adding
batteries to the system to 'carry' the current draw is
a 'crutch', your still going to have to recharge the
batteries, you haven't reduced the 'load' on the electrical
system at all.
'Doc

Thanks for the update, Toll Free. Mr. Orr was one of those "giants" in radio that helped all of us with his books. I learned a lot about antennas from reading what he published.

QRM

4573. Co-phasing 5/8wave for mobile....

Newsgroup: rec.radio.cb
Date: 2001-01-26 01:23:25 UTC
From: Mad Dog <lgssl@netzero.net>
Message-ID: <94qjtl$ejlvr$1@ID-20128.news.dfncis.de>
Source record: 70575

Well here goes....
I never really thought about it until now but when i co-phased 5/8waves on the truck they were only a 1/4wave apart.
Since they werent seperated by a 5/8wavelength i dont suppose i created any real gain.
Correct me if i am wrong but i now believe that 5/8wave antennas cannot be successfully co-phased on a mobile because spacing them at 22.5ft. would require an oversize load permit.
Doc, Sparky, Bill , Richard, jump right in i could use your help on this one.....
Thanx for the replies

Well then i suggest you carry a few spare alternator belts and a wrench, the isolator will indeed reduce the load on the charging system because you would not be drawing power from service battery to power the amp. The spare batteries supply the current and the isolator allows the 85amp (possibly smaller) alternator to safely charge the batteries.
The factory charging system would never see the 70amp draw of the amplifier, only a small additional amount needed to recharge the deep-cycle batteries through the isolator.
Using the stock system to power the amp will most likely prompt you to tighten the alternator belt so much (to help reduce the squealing every time you key up) that the bearings in the alternator will prematurely fail.
This is only my opinion and is not intended to contradict anything anybody else has told you.
Nevertheless Good Luck.....

You're claiming some sort of "jurisdictional immunity"? Unless this is a court proceeding (and last time I looked this was merely a NG) you're way, WAY off with your "defense".

> As for "what this group is intended for and not, here is a quote from
> the group FAQ wich can be found at
> http://www.conk.com/world/kd6tas/cbfaq5.htm:

Bill Eitner certainly DOES NOT make the rules for this Usenet newsgroup. His FAQ is self-published. You or I could publish a similar FAQ with completely different info. That would not make it legitimate.

>
> <<<<<<"However--and this is very important--when it comes to

Bear in mind that Bill supports use of amps on 27MHz, freebanding, and other forms of illegal operation.

> Specifically, we already know:
> 1. Amplifiers and radio modifications are illegal.
> 2. Freebanding (operating outside the assigned CB Band) is illegal.
> 3. There is language on CB which is rude and crude.
> 4. Some people splatter across several channels.

Bill may already know all this. But the dozens of newbies who show up on rec.radio.cb every week do not. Maybe they read the NG without saying anything. What idea of CB do you think they are getting when they see amps being sold and traded out in the open and 400 channel radios being promoted as examples of desirable CB gear?

> One more tip: Before jumping into a discussion, take a few minutes to

I think this applies to the "coax length" debates in here.

> So as many have said before I'm sure, voobners posts are unwanted spam

Aaron, you bring up a VERY good point. I have been on some good, clean boards and have been in contact with some of the folks via e-mail. One happens to be a minister. I just found out this evening that another fellow is a teenager living at home. The newsgroup should NOT be a lightning rod for profanity. A lot of different folks read these newsgroups - would any of the profanity users (and I'm not talking the little terms like a**) want their kids to see them using that? Then again, maybe I'm missing something. Perhaps a lot of these folks really don't care. I am also dismayed by the URLs being left to some uh .. let's say questionable ... websites. If some folks can't grow up and clean up their act, just e-mail each other the flames and let the rest of us get on with life. BTW, that was in interesting article you posted earlier about the international attention. If everyone can calm down a minute it would be precious to spend a moment or so reading it.

GET A JOB, Mr. BOOB-NERD !
Them "freebanders" have been there since the 60's, maybe the 50's. I thought I heard wwv on 25mc in the 70's or late 60's. I use to pick up those SW stations on my ILLEGAL (non-6th plank approved) 100mw WT CB tranceceiver when I turned the receive coils down in the late 60's (does that make me a hated annti-commy criminal too)? Or was I a criminal when I hooked the heating ducts in our house to the telescopic antenna to get more range? OR was I a criminal when I put another 9v battery in series with that WT 9v battery to make my 1st linear (18v into a 100mw WT) !!!!! (Has anyone else done these "criminal acts" when they were a lad as I was? The Soviet Onion is calling you sour grapped pinkos BACK, so go back to where you belong, back TO the U.S.S. R. (as the song goes, written by your fellow commies, the BEATLES)!!!!!!!
Dave!!!!!!!!!!!!!!

I would run # 4 welding or high strand power wire from the battery (fused @ 100 amps at the battery). You might want to upgrade the wire from the alternator to the battery also. Upgrade the ground wire from the battery (negative) to the chassis, not to the motor. If it does not do the numbers you expect in the vehicle then run it on a lower setting, there is no use in overloading the alternator for no reason. If it pulls the voltage down too far you are better off running it at a lower stage for the sake of the alternator. Do this test with the motor revved up a little.

If all of that doesn't help, Adding a 1 farad or larger power
capacitor installed as close to the amp as possible certainly could
help a bit.

If the isolator did work that way the battery would sag to 10 or 11 volts
yielding low output on the amplifier. I believe that an isolator allows you
to run accessories on a separate battery after you kill the motor or turn a
remote switch. This allows people to run stereo equipment etc. with the
motor off and still have a hot battery to start the vehicle. When the
vehicle is running both batteries are charged together.

> The Mad Dog wavin' good bye

OK, I will. A problem in two parts: Phasing and the antennas themselves. Maybe three parts, why co-phase at all.

First off, the spacing has nothing to do with the antennas being cophased. The world cares less whether they are 1/4, 3/4, 5/8 or whatever. If you propose to have any simple way to predict results it is convenient as hell if they are the same though. Sit ye down with a compass (the circle-drawing kind) and draw a bunch of concentric circles 1 inch apart from two spots 1/4 inch apart. Where they cross is a point of reinforcement -- where the wave from both meet. You will find that they form a line halfway between the two spots and at right angles to a line connecting the two points of origin. Any gain in the system is a matter of directivity, robbing Peter to pay Paul in a very literal sense. The short story is that placing 3/4 antennas on the same mounts you have had the 1/4 in should operate precisely the same way.

The question I have is just what the difference is between a 1/4, 3/4, 5/8 when they all are wound on a 5 foot rod or whatever. I am certainly no expert on the design of HDL's (Helical Dummy Loads) but winding more wire does not in itself seem to accomplish a hell of a lot; you end up with a resonant coil of some sort that loads nice. That it is also resonant at some lower frequency is right up there with 'and it is red, too'. Next time I can steal one of the monumental rubber ducks used in the 2 MHz Marine band, some experimentation is in order :-)

The full-size versions of longer antennas accomplish their magic by reducing the radiation in the vertical direction, robbing a Peter you do not care about (unless he is on Mars) to pay a Peter you do. Gain does not come from the mystic spirits, it comes from re-directing radiation in a desired direction. Next time you see a cell-phone antenna, the most usual one is a 3/4 over a 1/4 collinear (in the same line). It is designed to radiate more or less flat to antennas not a great distance above the ground. For any number of good reasons the cell base is not on the tallest tower in town. I note the Church of England has a honcho to negotiate hiding them in church steeples.

Which returns me to co-phasing. Assuming that you are not towing a 45 foot aluminum box around with you, just what is gained by cophasing them at all? Yes I know -- coolth. I am too old for coolth so I will leave that to you. Truckers have some special problems and leave it at that. If you have a King Kong local AM station, it more than likely uses a co-phased array to accomplish directivity and shading to be on the air at all; it is not possible externally to tell where they are aiming and shading. Back in the days it took a blue ticket to baby-sit these arrays at night, supporting a lot of Electrical Engineering majors in the process. Co-phasing implies directivity (and more receiver noise) so the short question is whether that's what you really, really want. And the Spice Girls don't get an apology, either.

Make any sense?

Dick N&#65533;BK, aging boy wonder.

As far as the 1FARAD capacitor goes it should work especially if you get two in line, but, can you find one with terminal screws big enough to hold 1 ought wire ?
or better yet 2 ought wire ?

If you can find them let me know cause I've been looking for one to handle those ought sizes.

Don't TRUCK STOPS up there carry them?
Truck stops here in the States have a (much) better assortment of CB radios,
antennas, etc. than Radio Shack does.

>714 Sandpile,
>The Mad Dog wavin' good bye

First, when co-phasing antennas, the type of radiator (i.e, 1/4 or 5/8
wave) has nothing to do with the physical spacing between them.

Now, if the two antennas are in phase the signal will be stronger to
the front and rear, and less to the sides. Conversely, if the antennas
are reverse-phased the signal will be greater on the sides, while the
front and rear will be quiet. These effects are maximized when the
antennas are physically 1/2 wave apart in free space, and reducing
that distance only reduces the directional gain.

All the trucks on the road with 'dualies' have them mounted on the
sides of the vehicle, and they are usually fed in-phase to get the
gain to the front and rear. What you won't see are antennas mounted
front and rear and fed out of phase, even though it has the same
effect, and might even have the advantage if they can be spaced 18
feet (1/2 wave) apart. Not likely, but might be worth a try on a
motorhome.

So the side-mounted antennas must be fed in-phase for gain fore/aft,
and there are two basic ways to do that. The simplest is to simply run
the coax to one antenna, and connect the second antenna to the first
with 24 more feet (1 wavelength where V=0.66). The other method
requires a splitter, and while I personally don't like that method,
others swear by it. Personal preference.

How big do ya want it? A couple megawatts? Here's what you do:

Wind some large-diameter flexible copper pipe into a 2.2 uH coil.
Construct a 15.5 pF high-voltage capacitor with aluminum sheet and
bondo. Connect them in series with one end connected to a *very* good
ground. Connect the other end to a flagpole and wait for a
thunderstorm. Now, modulation might be a bit tricky . . .

No doubt the system would see the extra load from time to time. The vehicle is a 96 Alt is at least 100 amp. Belt is self tensioning. Not to say it wouldn't get more of a workout. The only issue with extra batteries is where to put them in a mini van.

From what I understand is the isolator prevents you from drawing on the start battery. I am not sure how it distributes power while the car is running and the accessory battery is under load. Some research.

It will help filter the power leads. But for the price of the cap it will not show you any more watts if the amplifier already has a large enough capacitor inside (12000 mf) which it does not have unless someone has added it.

Why Voon8er, what happened to your love affliction toward the rest of us? Spread the love, man! Nothing on this newsgroup that anyone posted comes even close to the amount of libel and forgery you have committed over the last 60 days. Anyone even thinking they were even remotely harassed by you in any manner, personal or legal, would more than likely have a stack of hundeds of sworn depositions from just about every reader in here attesting to your bullshit and lies. Sort of like the one you keep crying about that supposedly threatened you. I heard there was a huge party at his house that night, many many folks attended, even many on here. I think what you are really crying about is the fact that you tried in vain to get multiple LEA's involved and shot your wad before actually understanding and comprehending internet law. Now you found out that there isn't a damn thing you can do, except civil-wise, and once again, you are made the fool and liar, all by you own doing and ignorance. Now, to take away attention from your ridiculous claims about everyone allegedly threatening your imaginary characters, you turn the focus toward Tim, who in all fairness, probably has the best case of all of us (that you libeled) against you for libel, with just about an entire ng at his disposal. See, what's so nice about Deja is, you can't take a damn thing back. Your proof lies within. Which is why your junk got pitched the first time you tried to bring the law in for no reason. See, they knew who was who also. It would be actual fun to see you bring a libel suit because first off, we know you don't have the money because as someone pointed out, you are unemployed. Secondly, you would be countersued by every single person on here you referred to in an unflattering matter, collectively, as one suit. You would be forced to drop your suit in return for everyone to drop theirs against you. Again, you haven't the money to do any of this. You need to quit while you still have a pot to piss in, Dougie, and go back to that poor, pathetic little existence you had before you found us. And oh, yea, lest I forget, I did learn one thing from you by reading up on internet law.......there ain't a DAMN thing you can do about it! Hehheehhehe! Later!

An isolator is 2 BIG ass diodes. It keeps one electrical circuit from drawing from the other. The down side to this is that whichever side needs the most current gets it and the other side gets zilch. I had this problem once and it was enough to put a second alternator in so I wouldn't be stranded with 1 overcharged battery and one dead battery.

"City_Slicker" <notenuftime@foolscorner.net> wrote in message news:94rvqm$603@dispatch.concentric.net...
From what I understand is the isolator prevents you from drawing on the start battery. I am not sure how it distributes power while the car is running and the accessory battery is under load. Some research.

> being promoted as examples of desirable CB gear?

The idea that they need better gear than the law allows if they want
to play in the real cb world, and I'm sure that the fact it pisses off
people like you just makes em want it all the more..keep up the good
work.

No desperation here my little key pecking friend, just disgust.
>
> -Aaron-

Just curious..you really seem to have a very strong obssesion with
laws concerning CB. Where does that come from? Have you considered
getting some help for your problem?

As I said before I am not going to help you trash rec.radio.cb with
another flame war. However I will reply to you via email, just don't
hold your breathe waiting for it. I actually do have a life and
bickering with you has a very low (though somewhat amusing) priority
in it.

As they used to say in the old 50s sci-fi movies, (assume serious but
starstruck expression) "There are things mankind was never meant to know".

James,

This shouldn't surprise anyone. Illegal CBers (freebanders, bootleggers, or whatever you want to call them) have made a tradition out of stealing frequencies. If given 23 channels, they take 40. If given 40, they take 80. If ignored, they then take 400. Given an inch, it seems they will take a mile. Now that several megahertz from 25 to 32 is in danger of becoming one massive CB-type hobby band, the international radio community is just beginning to sit up and realize they can no longer ignore the problem. No doubt this issue will be on the ITU's agenda.

First, twistiekins...it is extremely wishful thinking on your part that the aforementioned poster was me.

Second, Who gives a rat's ass?

Third, You do...look at you now, making alibi's that you cannot substantiate.

Fourth, thank you for spewing invective again. You are the typical keyclown who dishes it out but can't take it.

Fifth, WAHHHHH WAHHHHH WAHHHH...MY NAME IS TWISTIEKINS AND MY HUSBANDS AND ME ARE SOOOOO TIRED OF THE MEAN 'OLE HAMMIES! WAHHHH WAHHHH WAHHHH!

Sixth, The poster of that message<not me>directed nothing at you. You are merely a sissified product of indiscriminate breeding who cannot accept his inferiority. Post all the crap you want, I will too.

That may be overkill on the wire size, depending on length, but
anyway, try a car audio shop experienced with competition equipment.
Also an adapter could be fashioned out of capacitor bus bars or
something similar.

Hey hey hey..it ain't da water, man, it's the damn yankees. Hundreds of people coming to the 'pile on a permanently every day from the northland..they sure as hell ain't flocking to TX, so we have to contend with the tourists and yankees coming in who are looking for those white sandy beaches.. The kid who killed the little girl? Well, shoot, let's just hang the parents in a public forum for not whipping that boy's ass and learning him right from wrong and that it's not cool to crush skulls unless you have to, and even then, never of the opposite sex. Maybe we can send the kid to TX, you know, so you can strap him in for one of them longhorn eeee-lek-trisss-it-eeeee rides y'all are known for. We'd do it ourselves but people are whining, something about smoke coming out orifices and a few flames here and there, and, if you can actually believe it, something about 'ol Sparky not working properly Well! The audacity! We're a little more particular who we wax in the 'pile, but I figure y'all will wax anyone, so maybe we can get him on the next first class flight. You know he's just gonna spend our tax $$$$ and I think it would be cheaper and better for everyone around if we jes' let TX deal with this abominable child who thought his porky little ass was Rikishi!

4681. Re: Examples of discrimination against white Americans

Newsgroup: rec.radio.cb
Date: 2001-01-26 22:16:51 UTC
From: cdjacksonSPAM@fuse.net
Message-ID: <nHmc6.69045$HE2.6919465@news1.onlynews.com>
Source record: 70735
Cross-posted to: rec.radio.amateur.misc,rec.radio.cb,rec.radio.shortwave,rec.radio.scanner

Hmmm...ignoring an off-topic post isn't the point. The point is whether the rules already set for each group is going to be followed. If everyone posted binaries to non-binary groups -- what's the point in having binary groups??

Faqs and rules MUST be followed on Usenet and if one doesn't like it, one should start one's own group.

Actually, this isn't a scanner newsgroup -- it's a shortwave newsgroup. Kindly edit your cross-posting.

Hey 257, I'm now back at home here in minneapolis enjoying a few days off so I will be making all sort of noise on the ole radio. It was a pleasure meeting you when I was up there my friend and hope we can do it again sometime. Next time it's on me. And just maybe I will have some more time and some more of us can get together. Always fun meeting people from the radio. You were making alot of noise in my big truck today also. Oh yeah, How's the setup going for that P.U. of yours? Can't wait to hear it. Oh well, Untill nextime.......

hey buddy , we are equal opportunity waxers and you are right we have
no problem putting scum bags to sleep. it is good for society. the only
thing i got against it is that it takes time to get justice for the
victim's families but hey on the bright side , a lot of times these
guys get right with the Almighty, so it might be good that they take a
average of ten years to wax somebody. fine, send that boy on over here
and we will damn sure rehabilitate his sorry little ass, if you good
buddies in floridah, haven't got the intestinal fortitude to do the
job. incidentally our way of doing it is guaranteed to work or your
money back, nope, no short circuits here pally, we hook em up to the
mainline, no doubt about it. sit back relax, and your gone, just that

simple unless you are gary graham, aka shaka sankofa, the sorry murdering bastard, fought all the way to the death chamber. his father the devil was waiting for him too, when he went home. but hey, we can handle the problem. we texicans know all about floridah, now that the election is over, believe you me. your state has been in the news far too much lately. but heck, all you got to do is watch the show 'cops' every saturday night and see your boys in blue, the broward county sheriff's department chasing down all those floridians , doing their dope, having their domestic arguments and picking up their transvestite hookers. yeh your right pal, texas is a terrible place to live, no doubt about it. by the way , did i tell you i heard your big radio the other day. a very small voice out there jumping up and down, inbetween the keys. you weren't even moving my meter. was that your secret weapon?????? also i heard that idiot 667 out of maryland today i believe and somebody was giving goober a verbal dressing down if you will about being a noname mudduck , he , he, it was funnnnnnnyyyyyy,.....cd is out.....

What do you guys need such a big power supply for? You don't need more
than 10 amps to get full legal 4W output.

Doc,
I was amused when I began to see those slingshot launchers at hamfests in the last couple years. They cost around $40. I made mine for less than $15----a "sportsman" slingshot with the arm rest, a cheap fishing reel, and a small 5/8" nut. Used it many times at field day! Been using one for 15 years! LOL!

Source record: 70753

the 2510 has a much better reciever and beats the 2950 on sideband but the 2950 can be a little louder on am and has a easier to see display. the 2510 is better made and will hold up better for daily mobile. i've seen too many truckers with loose solder joints in there 2950's from ruff driving. i havent seen the new dx 2950 yet though.

HEY TW!

Yeah, we get to watch the bi-annual pilgrimage here in NC. You can tell by the motor homes towin' mini-cars from Noo Yawk, Noo Joisey, and "Pen-cil"-vania. If I see a Florida car here in winter and it is snowing, I give him a wide berth! Might be one of them "snow birds" or it *could* be somebody from Miami who has never seen snow! LOL!

By far, the HR-2510. Both radios are for 10 meter use only but from the radios I've heard (audio) and the frequency expansion I've seen, the 2510 won hands down. It all depends on who the technician is who works the radio mods and stuff.

The drawback of the 2950 is it usually runs into broken circuit boards. Audios nice from this rig but after modifications, this rig tends to "drift away". Frequency drift, problem after problem appears once this unit under goes an internal modification "heart transplant." Not a very good unit to use as a mobile station.

As I was saying, the 2510 is the choice to be had. Other than the pricey modifications to get this unit to do whatever you want to do, it would surely put a smile on your face and a frown on some peoples faces here on this NG. But have fun with whatever choice you make.

I have had both, I use a 2950DX11 and i think it is the best, its better than the 2950 and the2510 it sounds better on transmit & recieve than the other two radios and it won't break. Olditmer

Yea Graham left his foul trail and slime mark on both states, and yeppers you sure are right as rain about them there cops on parade made for televsion..but not on the west side. We's just kicked back and EZ goin' on the LEFT coast down here makin' sure no dutty yankee repubs want to show us a better way of how they do it up north...and we damn sure don't give no boop abouts the happenins' in little Cuba across the state 'cause it might as well be Mars. Sorta like comparin' northern and southern Calli, ya' jes' can't do it! Now, to the matter at hand. At least you heard me. Nothing special there, just a few tags here and there. If ya' wanna really play, email me with a time. Sorry 'but your luck on the receiver malfunctions, on, what, I do believe you called it an, Icom, however, there are a few techs I may be able to refer you to so as to get that thing repaired.(g) And when exactly do I get graced like 413 did and get to hear the serenade of Texas? Still listening to the setting sun.....

By far, the HR-2510. Both radios are for 10 meter use only but from the radios I've heard (audio) and the frequency expansion I've seen, the 2510 won hands down. It all depends on who the technician is who works the radio mods and stuff.

The drawback of the 2950 is it usually runs into broken circuit boards. Audios nice from this rig but after modifications, this rig tends to "drift away". Frequency drift, problem after problem appears once this unit under goes an internal modification "heart transplant." Not a very good unit to use as a mobile station.

As I was saying, the 2510 is the choice to be had. Other than the pricey modifications to get this unit to do whatever you want to do, it would surely put a smile on your face and a frown on some peoples faces here on this NG. But have fun with whatever choice you make.

The point of what was quoted from the FAQ was that hams are welcome here, but not as "preachers". (I speak with some knowledge of intent, since I was the author of the entire part which was quoted.)

It's appropriate to speak out if someone advocates something totally incorrect (as once happened when a participant invited everyone in rec.radio.cb to join him on the air at 28.085).

Otherwise, give it a rest. And don't feed the trolls.

4739. Re: Any Freq. for Emergency? (was: REACT Useless?)

Newsgroup: rec.radio.cb
Date: 2001-01-27 02:10:45 UTC
From: Dave or Debby <truth@planetc.com>
Message-ID: <3a7230ea@news.planetc.com>
Source record: 70785

I'll even use a TV transmitter IF I have to on 52-890mc to get help if I need it! A call to help over ANY freq. is OK, regardless of what you 6th planker pinkos think! That may be a great way to stop the QRM on those "DevilVision" freqs.!!!!!
Dave!!!!!!!!!!!!!!!!!

"Qrm2000" <qrm2000@aol.com> wrote in message news:20010125182645.05764.00000733@ng-de1.aol.com...
Rather than making blanket generalizations, let's put some specific examples on
the table:

HIGHLY LIKELY YOU WILL BE IN TROUBLE:
*Using any radio to access the frequencies of a law enforcement agency, fire department, military/Coast Guard/National Guard or civilian rescue service, regardless of the nature of the emergency.
*Using any radio beyond your normal authorization when other means of communications are available.

LIKELY TO BE TOLERATED (only for the duration of the emergency)
*Using a ham radio to get assistance underway.
*Using freeband frequencies (gasp!) to assist a maritime mobile station in distress.
*Transmitting on 11-Meters or FRS with more power than authorized in order to
overcome interference on the channel.
*Using GMRS without a license

And now, a fine example of what NOT to do:

A woman called "Please help me!" over a two meter amateur repeater. She had car trouble and needed someone to contact her husband. (He was a ham; she was
not. She was using his radio in her car).

After getting a telephone number from the woman, an operator at a base station
phoned her husband at work. He came on the air and determined his wife's location and the nature of the problem. (No emergency; just car trouble). He
told her he would leave work and come to get her right away.

A few minutes later, he made contact with her again on 2 meters and let her know he was enroute. The two of them then began a conversation related to what
they would have for supper and who was going to drop the kid(s) off at

school
tomorrow.

The repeater trustee intervened, saying, "Folks, we allowed contact with an unlicensed station for the purpose of getting assistance. This conversation has gone beyond what is necessary and is more than I wish to defend if questioned by the FCC."

Hi there,
I am also looking for an antenna?......I hear the shakespear 1600 is a
good one as well but not sure which one is the best to get?..
let me know if you hear anything?
thanks-Russ

4749. voobner (was RE:2950dx mods)

Newsgroup: rec.radio.cb
Date: 2001-01-27 04:15:50 UTC
From: Allen
Message-ID: <3a7245f1.2380121@news.mindspring.com>
Source record: 70654

Posting this makes me almost as bad as voobner, except for the fact that it's revelant to a few other post and posters in this group. plus the fact that a lot of people here enjoy the entertainment. However if any regulars object and wish I would just shut up and leave him alone, simply post a reply and I will, though ignoring him isnt going to make him go away. I've cluttered this group and spent more time on him than I said I would, I just found it a bit funny how he chooses to post some emails but not others. Take this one for example, I sent it to him early this afternoon.

copy of email:

Here is another private email for you to twist the meaning of and post to the group if you wish, since you really don't have a solid argument to stand on against me.
Regardless of what my messages to may appear to imply, I have not stated my stance on legal vs illegal equipment. I also never said discussion of legal CB doesn't belong. I did say the group is a public world wide forum open to all on topic post concerning CB and not just what you personally feel is acceptable. The fact that some of these things are illegal where you live really has nothing to do with deciding if it is an acceptable discussion topic or not in a world wide disscusion group. This is after all a disscusion group and nothing more.
Proper netiquette indicates that your repetitve post of legal advice replies to people discussing CB in spite of the fact they know its illegal and are not seeking legal advice, are indeed off topic and unwanted in most instances, AKA SPAM. If you want to discuss CB law, fine. Start your on thread and quit invading into others.
If you have a problem with free speach then there are appropriate newsgroups for that as well. You could even move to a communist country where people really can be persecuted for "illegal discussion".

Mr. and I say that lightly, you are always putting others down, why did you hop aboard this conversation when nothing at all concerned you and nothing bad at all was said about anyone. I have said or done nothing to you and you continue to trash it out for everyone. The way I see it, you are no better than illegal operators by acting as you are.

I personally am noy familiar with the mirage 2950, but if it's like
the rest of the Mirage/Galaxy/Ranger/RCI etc... line that Ive seen,
then the only differance will be the name and appearance. Electronics
inside are probably the exact same.

> Lets find out what your ISP thinks of this [snip]

Do you really believe that the average ISP gives a darn what is said in these newsgroups? My ISP, like most ISP's, has a stated policy against censorship of any kind. In fact, I'm sure most ISP's are so fed up with silly complaints, from self-styled newsgroup censors, they simply trash such nonsense without even reading it.

But, even if they don't trash the complaint, what good do you think you're doing? If an ISP boots a person off because of complaints, it would only take a matter of minutes for the person to have another account with another ISP. For example, there are almost two dozen ISP's in my area, not counting the national ISP's. So, in the end, your efforts don't even rise to the level of a minor nuisance.

And, in the process, your complaint leaves youself wide open for a libel lawsuit. If challenged, are you prepared to prove in a court of law that the person you complain about is actually a racist (or whatever)? The courts have always given wide latitude to words under the 1st Amendment, so mere words, taken from a newsgroup, are not likely to prove your case. Of course, in reality, lawsuits like this would be very rare (as I said, this isn't even a minor nuisance), but there is nothing to stop such a lawsuit if the person wants to make an example out of you (and a name for himself).

However, you're free to do what you want. I, on the other hand, would be very cautious about sending a complaint such as this.

Hi

I was taken on this deal and this may be your lucky day. The amp only has 100 watts on high power and gets bad reports. I just bought this amp on the internet and it was suppose to be a 100% so I was sucker! I paid $160 and would like to trade for a 35 amp power supply or $100.00. I've also ordered the schematic and I'll include it with the deal when I receive it.

The Antron is a great antenna that more than satisfies most on CB. The Imax is an even better performer, and dependant on your your retailer & budget, not much more expensive. I have too little personal knowledge of the Shakespear 1600 to coment on it. However RG213 would be a better choice on coax than RG8U or 8X.. 8X is the cheapest priced and smallest in diameter though.

It was always easier to get back to the Dome City when I got *very* close to Galveston bay, especially on the Texas City dike or Bolivar ferry (man.. there's a joke in there somewhere). When I had a base in Friendswood, barefoot mobiles running out to Galveston would get weaker and weaker, disappear, then magically reappear when they hit the water. Don't discount gains of being next to or on a large body of water.

Hello Steve and Train: Yes these are good points that you have made.

The thing I got a kick out of was that this posting to the
rec.radio.amateur.misc didn't yield the results the Trollers wanted.

He wanted to raise a stir and only got flamed for it.

A another good point to make here is that a few guys wanted to go over
and give the ham newsgroups a lot of shit and stir things up over there.
I didn't see this happening, which is a good deal. The replies from
rec.radio.amateur.misc was one of thumbing their nose at the trollers,
on more than one occasion. The hams over on rec.radio.amateur.misc
didn't care for being threatened or flamed either. So as I see it, the
two groups just want to enjoy the hobbies, and can benefit from each
other.

And the Trollers fell on their ass's

Kind of like when some Bozo comes on the air and wants to be the channel
master and take things over but only hits ya at 3 S-units on the
S-meter.

I usually ignore posts like these, but this one has to be the greatest show of stupidity so far. It must be either a very lame attempt at trolling or a pathetic cry for help. Either way, my sincere advice to you is to pull your face away from your electronic gadgets for a while and go press the flesh with some real people. I mean that.

From: sparky@cet.com
Message-ID: <3a72c00f.3798722@news.cet.com>
Source record: 70677

Finished an experimental base antenna last night. It is a coaxial dipole: the top is a standard 9' whip (8' - 8" after trimming) with the bottom element being 1-3/4" copper pipe (8' - 5" after trimming). The whole mess was mounted on the end of a large PVC pipe. I fed it with RG-11 from a 50:75 ohm transformer. My FSM measured a 18% gain at 50 feet compared to my A99. The SWR meter (Bird) didn't move at any point tested. I'm now thinking about selling the Antron.

Has anybody else built anything similar? If so, what were the results?

Nope, not legal in the U.S. and since relatively few people use it on the CB bands anyway it may not be a good investment unless you're looking at getting a ham license. Look in any amateur radio publication, plenty of good TNCs are out there.

Ah hell, Allen, I see no one here even close to VooN8er postings (that's a good thing). I for one love stopping in each day and checking out his nonsensical and benign threats and exchanged banter between he, himself, and he. He really showed his ignorance of pc's this week, though. Some serious ops have busted out repeat traces on his tail and he doesn't have the IQ to realize that an internet trail is as easy to follow as them red X's painted in the swamps so the airboats carrying the tourists don't become lost. His presence here is akin to the day when Kings ruled the earth and took time out to call the court jester, or fool, for mind fodder, to make them forget their busy routines. It's always funny about the legality things, but when he starts self projecting with his inner wants and desires, well, it's downright disgusting. I have seen some wars of a few choice words in here before, but nowhere near the magnitude of what this poor, deluded, fellow who is struggling with a sexual identity crisis at middle age has demonstrated. In one post, ya' want to slap his teeth, in the next, ya' feel sorry for him, wonder how someone can live to be his age without accumulating at least a LITTLE common sense, and wish he had a less traumatizing upbringing. You are right about one thing Allen, he ain't going anywhere. He has an affliction for many of us. And he is a cber.

Hopefully not all the CBers are so interested in amps - to my understanding they do not belong to legal CBing... Anyone who uses excessive power, whether he is a ham or a CBer, is not a good op. On the other hand, hams tend to have more right to use some muscle. However, not in the CB freqs and not with ham setups. 73 Gary

I had a similar mobile antenna for 2 meters intended for use on firetrucks
etc. that either didn't have a roof or had one in fiberglass. Best mobile
antenna ever. Think it was Antenna Specialists. You probably lose more
in the transformer than feeding it with 50 ohm coax.
Now figure out how to get a 27foot whip on it :-)

Good job!

I (gasp) almost agree with ya' Voon8! MOST who's actions would be dissuaded by what they read by a single, anonymous poster PROBABLY had no interest in the first place. Kinda like the newbies and amps, so ya' say. You made the comment alluding that if you could sway just one newbie against illegal operating in any fashion, you have made a difference. BUT, the pendulum swings both ways, if you scared a potential good op away from cb or ham, then you had the opposite of which you desire, effectively canceling out whatever "justice" you feel elevated to dispense. So what exactly IS your point of reminding everyone about legalities and stool pigeoning ways if what folks read doesn't effect their decisions? Hmmm? Answer appreciated while you are in lucid mode.

If ya' put a period after, "park next to a lake", it would have some validity,, but the can is funny. Where the hell is Blutarski? He can add to this thread with capacitor hat tricks! Right off the bat, these two came to mind:

Make sure your coax in the mobile is 18 ft. (sorry, couldn't resist)

Make sure the sticker on the Antron is facing North.

He is pretty good for entertainment. I hadnt been to this group in quite a while, I mostly just pop in on occasion when I need some help on something. I must admit I was pretty amused when I came in the other day and noticed voobners endless string of annoying posts. It kept me checking back in once in a while for the past few days. I have gotten a bit bored with him now though. I think its time to move on and leave and leave him for the rest of ya.

Cya,

Allen

Does anyone know of any real c.b. radio discussion groups that stay on the subject of such? I am looking for one that is not based on illegal vs. legal, but one that actually dicusses c.b. radio in a positive non-flaming, non-gouging format. One that is troll free and one that only bases oppinions on personal experiences. If such a group exists will someone please inform me about it. I will certainly appreciate any responses. Thank you very much from "DocTronics".

>
> Nope, not legal in the U.S.

Not true. I guess you did not check out the links in my prior post.
Specifically:

http://www.provide.net/~prsg/murs_faq.htm

Look at section 4:

---
4. Is MURS "VHF CB"?

Yes. MURS is the only "VHF Citizens Band" in the United States available for general two-way voice, data and image communications.

MURS is one of five Citizens Band Radio Services. The others are the (original) Citizens Band Radio Service at 27 MHz, the Low Power Radio Service (LPRS) at 216-217 MHz, and the Medical Implant Communications Service (MICS), the Family Radio Service (FRS) at 460 MHz, and the Wireless Medical Telemetry Service (WMTS).

The General Mobile Radio Service (GMRS) at 460 MHz is sometimes (if incorrectly) described as "the old UHF CB." That description has no legal or historical basis in fact. GMRS is the former Class A of the Citizens Radio Service, but was never "Citizens Band" as such.

LPRS, though legally a form of CB, allows only certain limited uses including theft tracking, auditory and health care assistance devices and control stations in automated maritime radio networks. No two-way voice communications are permitted in LPRS.

MICS and WMTS, though also legally a form of CB, allow only certain limited medical telemetry transmissions, usually in a hospital or health-care setting.

The FCC is currently considering an additional CB service. "Personal Locator Beacons" (PLBs) would be alerting devices that persons would be able to use in remote areas to summon assistance in emergencies.

MURS, CB, GMRS, FRS, WMTS and LPRS are all members of the Personal Radio Services as designated by the FCC. The Personal Radio Services should not be confused with the Personal Communications Services (PCS) in the 900 and 1900 MHz bands.

---

and section 15:

---
15. May I use my MURS radio to transmit data communications?

Yes, so long as the emissions are authorized in 90.207 of the FCC Rules. In addition, the authorized bandwidth is 11.25 KHz on frequencies 151.820 MHz, 151.800 MHz and 151.940 MHz. The authorized bandwidth is 12.5 KHz on frequencies 154.570 MHz and 154.600 MHz. [95.631(i)(b)]

Hooking up a packet radio controller (TNC) to a MURS radio appears to be permitted so long as the emissions meet the requirements of 90.207 of the FCC Rules, and the emission bandwidth complies with the limits of 90.209 and 95.631(i)(b) of the FCC Rules.

Now that there are 3 general CB bands for GENERAL communication by the public without a license being required, the old 27 MHz band (with 40 channels), with the two new bands; on VHF (with the 5 MURS channels), and the UHF band (with the 14 FRS channels). You need to be more specific in you comments because different types of operation are allowed dependent on WHICH CB BAND you are talking about.

I've tried the Isotron for 10/11 meters. It's not the
easiest antenna to adjust, but it does work. It wouldn't
be my first choice, but for a limited space, it certainly
is an option...

Oh, get real. I simply responded to your post with regard to what server you are using. Your headers say that you are indeed using windows (the Forte Agent listed is a windows app), and that you are 8 hours behind Zulu time (translates to PST). You need to get better control of your headers before thinking that you are "anonymous."

You seemed to think that you were well hidden and you're not. Do something illegal and Altopia will cough up your identity and originating ISP in a flash. They've done it before and will doubtless do it again.

In the meantime, posting as "anonymous" is wishful thinking.

There are easier ways of adding mo power to your rig,
i dont know much about those radios, does it have a place in the board to mount the second final?
Might be more cost effective to get a radio that was designed with dual finals.
When set-up properly dual final radios produce about 25 watts PEP.
That plenty for me, but will you be happy with it?????
Use good quality coax and fine tune the antenna to take advantage of the limited power available
from your bare-foot radio.....

A sleeve antenna is a coaxial antenna.

just picked up a thunderbolt 305(a h &y tuber,for the 80's)
and was wondering if anyone has done the el-509 conversion on one of
these.
i have read the articles on doing this to the dentron gla-1000,and the
instructions on moving the cathode,from pin 3,to pin 9,but on the
dentron conversion,pin 9 is not used,and on this amp,pin 9 is wired in
to the circuit
any info wouid be great
drop me a line

Yes, i'm a ham (don't hold it against me), and you
can hardly do better than a quarter wave antenna
as you have made. It will outperform ANY antenna
that has an artificial ground or coil to simulate 1 end of the antenna. You
have probably got an antenna which will radiate twice as well as most
antennas you can buy. If you get it Vertical, it will be a great long
distance antenna. (as you have seen for yourself). congrats on the
project.

>Now figure out how to get a 27foot whip on it :-)

I noticed the drawing in a text book, and also saw a pic of a small
tip-up mounted in a pickup, so I thought I would give it a try on 11m.
My biggest concern was if the bottom half needed to be shortened due
to a coaxial relationship with the shield on the feedline, but
apparently it does not matter.

You were right about the transformer, I measured insertion loss on the
bench at about 2dB. So today I hooked it up to a Johnson that I had
previously adjusted for 75 ohms and the difference on the FSM was more
like 4dB. Thanks.

It was an amazingly cheap antenna it was to build. About $20 in
materials if I bought them new, and that includes the whip. Now I feel
sick about how much that Antron costed.

Yup. It's easy to forget that the scope of CB Radio has been expanded by the FCC in to other bands recently. As long as people behave themselves on the new MURS channels it could be a lot fun for CBers in general. And if that remains so, without turning in to the mess 11m has become, the number of channels may even be expanded. This is a band where the technically inclined CBer can do some limited experimentation, and do it legitimately too! It's an opportunity that should not be allowed to go to waste.

It's going to be interesting to watch how things turn out. For TNC's, SSTV, etc. a lot of that sort of equipment can be found used at local Ham Radio flea markets cheap. A check on the web for listings of local Ham Radio flea markets may have one local to your area. The link below will let you search for one in your area if there are any.

Was intrested in purchasing this one--. Maco Flat 6. Wondering if it can at all be mounted vertical, instead of horizontal.. Most of the people I talk to run vertical, and are between 20-50 miles away. I like the features of this antenna: the Quad Reflector, and the 5KW gamma match., with the 31' boom.....but I want to keep the antenna as light as I possibly can....And I have NO USE for horizontal.
Since the company claims there are NO holes in the boom, I don't see why this wouldn't be possible.... Anyone ever done this?? just curious.... That is an awful lot of money to spend on a project that won't work..... Let me know, Thanks for all the help---

Has the board and the brains of the older Cobra/Uniden SSB radios, right? I had one for awhile in unmodified condition and was very happy with it. They can be made to "Walk and Talk" if you know what I mean!

I think of a coaxial dipole differently as well but this business has been hung up on terminology so long I ain't gonna fight about it. Good Grief man, there are those swingers that really believe AM amplitude modulates.

Glad to help. The 73 ohm impedance in free space is rarely achieved in
real space. I am a bit amazed that this had so much effect though. See
chart 20.1 in the RAH for a bit of insight. The copper pipe is a bit
shorter because it is 1.5 inches in diameter.

The Antron is a good antenna; like Doc I am a bit incredulous that the
thing works as well as you say against it.

Now if you like cheap, get into fullwave loop antennas. Getting height
can be a problem but the antennas are nothing but wire. One of the better
15 meter antennas I ever built was a delta loop hanging from the eaves
from tv standoffs.

Hey good job !
You built a Shakespeare "Big Stick" clone.
"Very low angle of radiation"
You can also try take 18 feet of coax peel back the top 9 feet of braid.
Shoot fishing line over highest tree with bow and arrow, tie and pull up
from top (like raising a sail)
.............use lightning arrester !
They perform incredible for a 1/4 wave
You can also slide the whole thing in a 20 foot PVC pipe

Sparky wrote in message <3a72c00f.3798722@news.cet.com>...

I make similar ones all the time for friends out of RG-58 coax. I don't have the dimensions handy but they are similar to yours. I peel enough coax braid back over the coax to make a 9ft "sleeve" and cut the exposed center cond to about 9ft. If you wind up about 10 turns of the coax on a 2in form where the exposed braid ends it will keep RF off the coax and allow you to trim it for a perfect match. You can suspend it inside a PVC pipe, hang it from a tree or throw it out a hotel window when traveling. Do a web search on "coax dipole" and you will find plenty of pics and dimensions. These will perform the same as the old "Big Stick" antennas from years back and will only cost a few bucks. The Antron 99 is an end fed 1/2 wave and should perform about the same

James,

Witness the lack of reaction to this news.

In any normal hobbyist group, response to this sort of development might be a mobilization to help "clean up" the problem, get the laws changed, begin a dialogue with the authorities - for the good of the hobby.

Yet as you can see, no one in this newsgroup could care less about theirs or ANY community, much less the international radio community and CBers effect on it.

Dave, I hate to suggest this since you will undoubtably get sick. Go read some of the amateur newsgroups (the misc is good for a start). The posts there are JUST as sick, if not sicker. My only guess is some of the guys fried their brains with too much RF. I don't know about 2 meters - I stick to 440 (usually 444.850 or 444.750). Sorry I can't help you - but I'm just as clueless as the rest of us are about this one!

I don't think Sparky believes that he has invented anything particularly new but it is a fine execution of the idea, weatherproof, trimable, decoupled pretty well from the feedline, mechanically solid and suitable for quite a few years. No good reason to rain on the parade.

End-fed half waves, the so-called Zepp because they had to be used on Zepplins, are fine antennas when they work. High impedance feeds tend to be pissy in damp weather and can be absolute bastards to adjust. Probably before your time, the Ringo Ranger was used on both 2 and 11 meters with owners who loved them or broke into an imitation of a cavalry sergeant when they were mentioned. No middle ground. They are not as a group my favorite antenna.

The bigger question to me is why the Big Stick did not simply take over the world.

Son, I responded to an existing thread that had
already been cross-posted to the CB newsgroup (on a
topic of interest to all newsgroup users - complaints
to IPS's), and I'm sure that at lease some of the other
replies in this thread are from others in your
newsgroup (just like your message is - crossposted to rec.radio.amateur.misc).

So, to answer your question directly, I will continue
to post where I want, when I want, and on any subject I
want. It is neither your business, or your job, to
tell me to do otherwise.

Now, if you want to complain to my ISP about my use
of rec-radio.cb, I'll be glad to supply them with a
long list of people they can contact who can verify my
many years of citizens band radio use in this area
(which means that I have just as much of a right to
post to rec.radio.cb as you do).

But, even if that was not the case, it is still none
of your business what I do. So, I strongly suggest
that you back off, worry about your own cross-posting
to other newsgroups if that is a big issue for you, and
let me tend to my business.

By the way, if you want to "cause grief" to the ham
groups, that is your business. But, don't try to blame
your bad behavior on me, because I'm following
newsgroup rules. If you want to violate those rules,
than that is between you and the people who complain to
your ISP.

Good day, City Slicker.

Dwight Stewart (W5NET)

If you Morons think Mr. Aaron H. Voobner is the real voobner. And n8 is the real n8. You are dummer than you look. They are fakes. Just some ass hole that just wants to screw with your heads. If you think the real voobner has nothing better to do than come in here night after night and read all the crap in here then respond to it. If you do you need to wake up and get a reality check. There is a program on the web that you can use a persons massage id address and e-mail address to trace anyone back to where ther post came from. If you use it you will find out who voobner realy is. I did and I know. So find it try it and you come to see the light too.

4862. Re: U know your Linears ah Hummin when

Newsgroup: rec.radio.cb
Date: 2001-01-28 05:50:37 UTC
From: Karl Vesterling <kjv@adelphia.net>
Message-ID: <NqOc6.5387$mo2.624010@news1.news.adelphia.net>
Source record: 70966

When you drive by the nursing home and the patients hear you in their hearing aids quite clearly.

-- This isn't funny though... I know someone who ran a linear out of his house. His old high school friends elderly mother lived a few doors down. He stopped by for a visit and told Gary he was a little concerned for his mom cause she's hearing voices. The voices say stuff like,.
"Muahahahahahaha you can't find me."

Gary never made mention of it to the guy... I had to contain myself to the best of my ability in order to keep from laughing.

She eventually was told, Gary wasn't an asshole... He just wanted some time to sell the linear before he owned up to it with full apologies.

4864. Re: Coax For Beam Antenna?

Newsgroup: rec.radio.cb
Date: 2001-01-28 06:35:21 UTC
From: 'Doc <w5lz@oio.net>
Message-ID: <3A73BDA9.2227492@oio.net>
Source record: 70968

CastleCra,
RG-213 should work for you. If yourbeam is tuned correctly,
so that it's resonant, and the SWR is low, almost any coax will
work. But the SWR ~has~ to be low at that power level. Pick a
coax that has a very high voltage rating, that's what will give
you problems. A 'rotation loop' needs to be fairly flexible,
RG-213 might work if the loop is large enough.
'Doc

Sorry don't have the instructions, but I can tell you from personal knowledge that it's not worth the trouble. You would be better off putting the time and money into obtaining an external modulator or small ampliflier if you want to see a fair result from your effort to get more output.

Allen

From: oneqck76ta@aol.com.com.com
Message-ID: <20010128020921.13156.00001352@ng-mh1.aol.com>
Source record: 70973

Does anyone know where to get the small flush mount style resistors? Someone brought me a Magnum delta force and tried to do the channel mod by soldering the 47k ohm resistor in place (Never got it there either) and in the process took out the small resistor next to it by hitting it with the soldering iron and said he lost it (They look really small!!!). So now I am wondering if anyone knows where to get them. Does rad shack carry them? Have yet to check. Also, What is the easiest way to put them back in (Type of soldering iron, ect...)? They look kinda tuff to solder if you don't have the right stuff and I am willing to get it if I don't have it. Thanks in advance. Oh well, Untill next time.....

Later,

Greetings!

You're looking for SMD resistors. Not sure of the value, this is what
makes it difficult.

Try Digi-key on the net.

www.digikey.com

They may not be able to sell you one "chip resistor" perhaps a roll of
a thousand - but what to do with the 999 left? Good question.

The opportunity does exist that you can cannibalize one from a non
working radio like a 501 XL or one of the "Vertical boards" found in a
lot of newer radios - one in the junk drawer can help provide the part
needed. Radio Shack, bless their hearts, have a ton of them in their
CB's but not on the store shelves. You'd have to special order it.

A lot of times, the "chip" resistors are used to pullup/pulldown logic
levels when a device needs to have a neutral state, not on/off. And
obtains a "float" voltage across the pin it controls.

You might be able to use another value close to the one lost, and not
suffer any problems.

The identification is pretty easy. A resistor with a 104 is a 100K,
while a 473, id a 47K. It's simply the first two numbers as the value,
with the number of zeros to put behind it as the last number.

SMD cap chips are a completely different story, like a color code but
more like shades of brown. Due to the level of capacitance the smaller
device can have is small, there is still a wide variety and you have
to rely on the manufacturer to assure quality control - as having the
proper value in the lot.

Greetings! [Follow up]

My apologies on not supplying some tips to help you un solder the
part.

You need a de soldering braid and a fine tip soldering iron.
Preferably low wattage heat for the tip.

Using the braid, remove as much solder as possible.

While the part is still hot, you should be able to "lift" off the part
by using a fine tip screwdriver or the tip on the iron to move it off
the pads.

Soldering it on is a bit tricky, I use a dab of solder on the tip and
using a fine tip screwdriver to hold the SMD on the board, tack one
side and then the other.

Hope this helps.

I use tweezers to hold the part and he is right about the braid and low wattage pencil. If you are planning to do a lot of work on these, you might want to invest in a good soldering station designed for SMD work.

Quite right. I wanted something permanent. I have already built two
CCD antennas for temporary use, and they work great.

I did notice a couple things today. First, the coax was radiating, so I replaced most of the PVC pipe with a 10 foot piece of fence tubing for both a choke and a mast (thanks, Mike). The difference between the homebrew and the Antron is now 8%, and that difference may be due to radiation patterns. However, mine receives better by almost one S-unit. Also, the impedance transformer is wound on a torroid core of unknown mix, and I have never checked it's frequency response. I'm just guessing that it's probably operating on the elbow at 27MHz. I'm going to wind a new one tomorrow and try it.

>Now if you like cheap, get into fullwave loop antennas. Getting height

>15 meter antennas I ever built was a delta loop hanging from the eaves
>from tv standoffs.

I have worked quite a bit with loops of all kinds in the past, and learned that an impedance analyzer is almost necessary for good efficiency. The two exceptions I found were DF loops and lowfer antennas. About ten years ago I built a mobile goniometer that I still use on occasion. Other than that, I don't care much for loops.

But I have been tossing around the idea of a CCD loop . . . ?

I have a couple CCD antennas I use to trim trees with.

The balloon thing brings back memories: When I was in High School we
used one for a shortwave antenna. It worked great for about three
weeks until a freak gust of wind landed it on the power lines. It
cooked the old Lafayette, and darn near cooked us, too!

Sort of like the way you continually self contradict? It's better to come out and admit you're at a loss for an answer and have no life than to try and play several characters and "Yea, you are right again and since you put me in my place so many times, I'll continue my juvenile practice of tryng to change the subject when you catch me in lies".

HAhahhahahah! Oh Geez. Here we go with delusional lies again and self professing ignorance. Ya' see, VooN8eris sort of a newbie and has no clue about how a pc actually works and all the intricacies involved...sorta like an ostrich, stick your head in the sand, and since one can not see, others can't either..sheer ignorance. All the ops are wrong and 'ol VooN8er is the only one who is right! HAhahhahh! See, this is fabulous entertainment, 'cause he believes it. He lies in almost every post. Lets see. He mentions obsessions. Lets count posts. "nuff said about that. Your "crime" has been direct threats, violation of usenet rules, and libel against dozens of rec.radio. posters, many who never said a damn word to you. The only thing amazing anymore is your twisted psyche of continual denial and lies about who you are when you have been proved a phony, lying, porn posting troll repeatedly. HAhaha..that alone is worth checking in on. If it helps, you can always try answering the question posed to you (snicker).

:+> about cb.
:+>
:+> Can you provide some insight. Would appreciated it. Thanks
:+>
:+> ebartels@aol.com

Welcome to rec.radio.cb.

Since you've expressed an interest in CB, and you've set a $$$ figure
to work by, it helps out in getting you going, in the right direction.

There are a few things to remember, Antenna, Coax, Location, Power,
Mount, Radio and Features [for the radio]

Since you are only wishing to spend not more than $200.00 this limits
the number of options.

As a good rule of thumb, spend more for the antenna - and get a good
antenna for your radio. You'll also need a mount for it.

A typical CB antenna uses a 3/8-24" threaded ferrule, and there are
plenty of mounts that can accept the antenna.

You only have 4 watts of AM carrier power or 12 watts of SSB power for
RF production, efficiency is important. Do don't have a whole lot of
RF power to work with, so maximize what you have by purchasing a good
antenna.

Antennas come in a variety of sizes and lengths. Choose one that is
the longest acceptable to you and buy a good mount to hold it on your
car as you drive.

Anything less than 4~5 feet in overall length for the antenna, you are
wasting money. Try and use longer antennas that are close to the 1/4
wave length - or about 108" [approx 9 feet] long in length.

Using a good antenna that is shorter than the recommended length of
use, that being the 1/4 wave length, can still get you very adaquate
performance. Even though it is shorter, and not as effective, you can
still get good results. Brands like Francis, Solarcon, Firestik, and
Wilson or K40 can get you on the air - preferences of the types I like

are listed first in descending order.

Antennas also should be tuned, most CB antennas when properly mounted don't have a tuning problem and provide the right "match" or low SWR needed to operate without damaging the radio. However, if you have access to a local CB shop they can help you install and tune the antenna if it's necessary.

Coax? You'll need it for hooking up the antenna to the radio. Most people keep it simple, and use one CB antenna and a good mount for it. The typical CB antenna requires you to use RG-58 or RG-8, or RG-8x mini, and has a 50 ohm impedance to help provide the proper connection and operation of the antenna.

Mount? There is a wide variety of types, styles, and the ability to handle loads varies. One of the most durable is the "ball mount" that requires you to drill holes into a fender or roof to mount it. However, other mounts can reduce the amount of sheet metal damage and are not recommended for handling heavy antennas on them, but you can use lightweight antennas and get good performance.

Many mounts have connectors on them to make it easier to hook up coax to them, see above. You can buy coax that has sealed connections, and I recommend these to keep out water and reduce corrosion. They last a longer time and give you fewer problems.

Power? I'm talking about supplying the radio with good clean power connections. Most people use the battery, check your vehicles warranty in the owners manual stuff, stuffed into the glove box when you bought the vehicle. Not many people understand that you can violate a warranty issue if you try to route power directly to the battery - then if any electrical problems surface, whether caused by the radio or not, you could be out of luck in getting warranty service for it.

I use the fuse block, and then take some time in getting to know the vehicles electrical system and fix faulty connectors and grounding locations from corrosion. You get your hands dirty, but it's well worth it in the long run. If you're good and have a mechanical inclination, you can save some money by doing simple repairs yourself.

Your CB radio is a good indicator of electrical system problems and how well the engine runs. You might hear a considerable amount of engine noises when you first install a CB. It's normal and indicates that you may have some small problems - fix the connections on these affected parts before the become big problems later.

Location? You don't use your Microwave oven in the bathroom do you? You use it where it's needed, in the kitchen - right? The same can apply to antennas, put it where you need it, in the highest spot on the vehicle, preferably the roof. Remember that you have a limited amount of power to use for RF, so give the antenna a clear shot to the

horizon as you drive.

Radio? Features? Well, this could be the longest part of the message,
I'll keep it simple - do a search for web sites catering to CB radios.

Perhaps the first and only site you'll need to visit to get all the
stuff listed above, click or type in the URL on your browser...

http://www.bills2way.com

This site I highly recommend for getting what you want and at a good
price.

I also have a primer for CB radio at my website and the link for it is
at the bottom of this message in the signature.

I hope this helps you

Just curious Goobner ?
I notice you posted alot of anal-retentive responses late last night. I cant speak for the rest of the community, but i was doing my usual Saturday night business..Going out with the woman, then coming home and fucking each other like wild horses.
Ya' know, once you get laid for the first time, these childish tendencies about illegal this, and illegal that, will fade toward the rear of you mind.
If you are unable to perform the ancient ritual of attracting the opposite sex, perhaps us REAL ham operators could take up a collection and find you a hooker.
Respectfully yours, NAVRP (Northeast-Anti-Virgin-Rescue-Patrol)

>Aaron Voobner
>
>

Aaron I wasn't defending anyone. I am a legal operator and have been for years, I am in the proccess of getting my ham ticket myself and I have great respect for the amateur radio program. I know I'll get responses saying that ham operators are bad too well, there are good and bad in all groups and you can't judge a whole group by the conduct of a few individuals.

What I was saying, is that this is a duscussion group and people have the right to discuss what they want. But all the flaming and crap going on by many of the people in here is really getting out of hand. some of the users here (myself included) want to post some serious questions,comments regarding equiptment problems (with legal equiptment) and with all the flame wars going on who knows if our posts will be seen or not.

Aaron I applaud your devotion to legal radio. But I respectfully say that I think you are going about your fight the wrong way

From: Dave or Debby <truth@planetc.com>
Message-ID: <3a7467fe@news.planetc.com>
Source record: 71089

Yep, pursuant to the list that was found in Germany in 1917 that says HOW the commies want to TAKE OVER a country (one of the items was for them to GET PEOPLE involved IN SPORTSand other SUPERFICIAL things) (ie: Stooperbowl sunday TODAY), I encourage ALL big linear bros & honkeys and all AMERICAN Hambos to go out driving around and KEY DOWN and make as much TVI as possible, playing the National Anthem or other patriotic songs, so it will come over their Channel 2-6 (52-88mc) on to the Stooperbowl COUCH POTATO watchers and make them remember WHICH country they are in so they can TURN OFF the Stooperbowl and quit beating the wife and DO something constructive today like Honoring GOD and Country instead of paying homage to these alleged greek "gods."
All of the pinko hambos that are down on alleged "illegal" CB'ers are really secret closet Commies, because ALL they care about is the TVI that some CB's and amps cause, in cities that have TV Channels 2 & 5 (and maybe other channels). The Communists in Hollywood (which IS full of them) keep pouring out their FILTH on 52-890mc and ONLY a COMMUNIST would want those TV channels UN-Jammed so that the American & Canadian people will continue to be brainwashed with their IMMORAL TRASH ! So I say to you BIG POWER boys out there, both Black & White, KEY DOWN on da Stooper bowl today, and maybe this will be the beginning to get OUR Country back!!!!!
Dave!!!!!!!!!!!!!!!!!!!! 2 Chron. 7:14 IS the answer!!!!!!!!

Hams or nonhams, doesn't matter. If they are pursuing illegal CB they are idiots, and should be told they are idiots on a regular basis, until they stop being idiots.

>
> What I was saying, is that this is a duscussion group and people have
> the right to discuss what they want.

I never said people didn't have a right to discuss what they wanted to. Let them discuss away. But I also have a right to post my opinion. And I don't need to be polite to idiots who are rude to me in the first place.

> But all the flaming and crap
> going on by many of the people in here is really getting out of hand.
> some of the users here (myself included) want to post some serious
> questions,comments regarding equiptment problems (with legal
> equiptment) and with all the flame wars going on who knows if our
> posts will be seen or not.

The only serious subject this CB newsgroup discusses with any regularity (aside from the "coax length" debate, which is a repetitive feature) is AMPS. They don't CARE about legal equipment or legal operation.

And regarding flame wars, watch what happens when one illegal cb equipment dealer starts feuding with another. Or one keydown group starts mocking anothers equipment. There's PLENTY of flame wars in rec.radio.cb that are tolerated and encouraged - as long as they don't deal with the subject of legal vs illegal CB.

>
> Aaron I applaud your devotion to legal radio. But I respectfully say

Webdoc,

There was a group of us in rec.radio.cb who were informally planning a
sit-down breakfast the morning of the Dayton Hamfest, and a get-together
at the local YMCA the evening of the 1st day. There was also some
interest in a Riley Hollingsworth "Q&A Seminar for CBers".

There you go again Tim, trying to get others to follow in your foot steps in illegal operations on 11m. It's not good enough for you that there is a LEGAL CB BAND (not 11m) to use packet on, without dragging others down to your level? As I have said before Tim when people want to know what's wrong with CB Radio you step up to the plate, and provide the prefect shining negative example, as you did once again. As you pointed out in another post that your web site will be "popular" discussion at the Dayton Hamvention in May this year. So if you get a lot of negative flack from the attention by the Hams, and legal CBers, attending the event, you have nobody to blame but yourself.

I am a 6 meter op who has just fallen in love with PSK31. Seeya on 50.290! Also, I am totally opposed to ILLEGAL CB operation, and am really glad about the law that was signed recently that gives local governments the right to make or enforce local laws against the illegals. One of the groaner experiences of ham radio is having someone see your setup the 1st time and say "Oh, YOU are one of those guys who tear up my stereo and TV!"

It was high time something was attempted to get these public nuisance type operators, with their ILLEGAL radio equipment, under control. They are a nuisance to the general public and ILLEGAL!

Issued by the FCC! HAH! Over 24 years ago. It has no "real" validity today--just like your "knowing" Riley Hollingsworth. Another laugh.

Seriously, just how does the mere discussion of "illegal" amps and stuff make it illegal? Last I heard, it is perfectly legal to discuss tokin' weed, but actually smokin' a joint is illegal. Going to FCC and telling them that there is a bunch of guys on a news group discussing amps will just make them laugh. There is no CASE! A dealer selling amps and "export" radios is, of course, illegal. A bunch of guys discussing a Galaxy is NOT illegal. So, why fill up the board with accusations and threats of turning people in? All that does is set the board on "fire" with flames and useless threads. It does nothing to achieve the "legal-ness" that you claim to promote. Reading your "threats" and chiding only leads me to one conclusion: This is only to feed your own ego be-cause any sane individual will know that it does no other good, nor does it achieve the stated goal. When I visited your website and read your claims of "whom" you proclaim to "know", it confirmed my suspicions. I know Riley Hollingsworth, BUT it is only as an acquaintance and thru talking with him via ham radio. I HAVE met him in person and he "does" know who I am. Gives me a good reason to operate ham and CB legally, right? So when I read your claims on your site, I laughed out loud, Betcha you've never even SEEN him in person, much less "talked" with him unless you count all those emails you sent. Sure, I believe he even answered you--he is very nice and does answer email when he has time. As a matter of fact, he passed thru here a couple weeks ago and was on one of the local 2M repeaters, and his home town is 30 miles away from where I live. Maybe you called him on the phone and happened to catch him in the office? So now you *know* him? Don't think so! BTW, I have a standing offer to Riley for lunch, which he has accepted, and will keep when he has time and is home on vacation. Maybe I'll mention you to him. Would THAT help your ego?

Tell ya what: If you are so intent on ratting people out, why not just read the CB boards, keep quiet and then just rat out whomever you see fit. Then rec.radio can settle back down to some good discussions about radio and the fires will die down to a smolder. This had gone too far, and I am damned tired of it.

TO THE TUNE OF "BATTLE HYMN OF THE REPUBLIC"

My name is twistie fagboy
I'm a keyclown of this land
I stroke my pee pee daily
And keep hunting for a man

The FCC will bust me but I can still be gay
And my lips go sucking on.

Keyclown, Keyclown, a CB asshole fag
Keyclown, Keyclown, sukkin dix until I gag
Keyclown, Keyclown, a CB asshole fag
And my mouth goes sucking on....

> Issued by the FCC! HAH! Over 24 years ago. It has no "real"
validity
> today--just like your "knowing" Riley Hollingsworth.

KOA5959 - I never said it has current validity. I simply posted it and stated it was issued by the FCC.

RILEY - I don't know Riley. I never said I did.

MY POSTINGS - It is my right to post my opinions about legal CB in a CB newsgroup. If they offend you, don't read them.

ILLEGAL CB SALES - The FCC has set up info@fcc.gov and asked for support in reporting sales of illegal radio gear. If you want to make use of it, fine. If not, don't.

WHAT YOU THINK I SHOULD OR SHOULDN'T DO - Just because you say I should "keep quiet" doesn't mean it is a good idea or I must comply with it.

Thank you,
Aaron Voobner

Yep, and here is the actual posted threat!
N8 has never threatened anyone in any way. Go figure the hypocritical
outrage! Sissies, all of 'em.

Big Ben,

Posting someone's personal information in a Usenet newsgroup (whether it exists on the web or not) for the purpose of harassment is a violation of an ISP's privacy policies. You have now unknowingly given Mr. Douglas Adair a legitimate reason to get your ISP to cancel you.

Hope this helps,
Aaron H. Voobner

Hams or no hams, when you are lying, and there is proof beyond a doubt, I will post it. Mr. Web Doc, there is no Voobner, a simple searc will reveal this to be true. Also, if it is that important and you wish proof, email me and I will prove Voobner, N8WWM, and a few others are indeed one in the same. Do a search at Deja and see how this "Voob", N8WWM began his correspondence with us in this ng. He has been proved a liar MANY, MANY times, (again,email me if you want proof) and spams the group with demented pornography. He cannot answer simple questions when directed at him. He made the quote yesterday that no ones behavior will be affected by what they read, and I asked him does this not apply to his own repeated posts about legal vs. illegal issues as well, and in the true form that he has consistently demonstrated throughout his presence here, he deflected the question and refused to answer, the same as he has done with your post. To answer would be self deprecating, self-incriminating, and self explanatory in a contradictive state. No? Note how he arrogantly and repeatedly states the nature of the ng, from HIS perspective only, such as, "The only serious issues"....serious to his mental capacitive deficit, maybe, but note how he only accepts HIS belief as valid. His inability to debate an issue on pure merit and anyone who has put him in his place or dared questioned his views has resulted in, well, as I said, check the archives. It is for this reason that I venture to say over 90 percent of the regulars here have him on killfile. More than one reasonable man has attempted your approach, Webdoc. Good luck, sir.

Webdoc, first of all, I think I can speak for the majority here when I say not many, if ANY, here in rec.radio.cb, would consider VooN8er an "us". These are his disguised pathetic little cries for acceptability among the group. By now you surely have caught on to his, me, myself, and me pattern of his multiple posting personalities. The pattern remains. He slips up in conversation, forgetting who he was posting as, someone calls him on it, he gets angry, and reappears using their nic under a different domain, usually Deja. He has done it consistently here with half a dozen of us, maybe more. The Deja thing alone solidifies and ascertains his credibiliy.

Radio Shack can order them you can prepay at the store,then receive
the parts in the mail.They used to give away the master catalog that
you could look up what you needed and call a 800 order number they
now charge for the catalog.It used to be called tech america now I
beleave it is just radio shack.I ordered some 2sb754 awhile back so
cheap in price ordered 6 of them for the price of one on most of the
online thech placeses hope this helps.

To further clarify:

Your posting profanity-laced flames to N8 are considered an "opinion",
and are protected under freedom of speech. However, when you post
private information about an individual (N8), no matter how the info is
obtained - without that individual's permission - it is considered
"intent to harass". It is a serious violation of the Terms Of Service of
your ISP (look it up) and grounds for termination of your
account.

not alot if any people have a 128 PILL LAYING AROUND the cost of the pills alone is enough and if that's not enough the sheer size and weight let alone the dc current required to power this beast along with the dc current for the drivers would keep all but maybe 2 or 3 people in the US from even attempting to run one or build one and any who are has one is doing it for shits and giggles because nothing about it would be easy, cheap, efficient or smart. good luck finding a picture. I am sure you will get at least 1 maybe 2 if you are really really lucky...

This is where you are wrong. This is a 6M amplifier, and says so on the case, where oh where does it say in my post that it is designed for 24-35mhz? And it is not illegal to manufacture or sell an amplifier that will operate on 24-35mhz as long as that is not the ONLY place it will work. Lots of 10-160M amplifiers made legally, as are 6M amps. Should some enterprising and highly motivated individual with enough electronic knowledge to do something other than come at the mouth about something he thinks he knows in order to impress himself, many of these are capable of being able to operate on 11M, as are 940 kenwoods, 706 Icoms and damned near every other solid state HF rig and amp made since the early 80's. Go get 'em, sonny!!! Just do your homework.

It was posted as a joke (or insult), but he may have something here. Extreme profanity is almost always a definite symptom when one is diagnosed with Tourettes. The jerkiness-like spasms that are present, similar to seizure-like activity, would explain the embarrassing, repetitive postings of subject, affecting the limp wrist, closest to the "send" button. A spasm in this position would be the responsible party, for resending N8's repeated and unintended speech impediment, characteristically known as a stutter, over and over.

>real men of antennas are you aren't impressing the lowly cber much...

You make a lot of assumptions. First, I'm not a ham, and since this
antenna is used only for CB, this is the most appropriate group in
which to discuss it.

Second, the 'real men' of antennas are not the amateurs but the
professionals -- the people that get paid big bucks for their work.
I'm certainly not getting paid anything for this, so I guess I'm not a
'real man'. Are you?

Third, you have assumed that I am actually trying to impress someone.
You need to brush up on your reading comprehension skills because I
was only asking questions. If I was directing my posts at 'the lowly
cber' then I would have dropped my punctuation so you could read it.

The many answers I received allowed me to solve some minor problems
with this antenna. Their posts were helpful, and your's is not. If
anyone gets any useful information or ideas from my questions and
their answers, great. But it's a sure bet that nobody will remember
you as a worthwhile contributor.

Thanks to all the helpful response. Here's a description of the final project for anyone that wants to give it a try:

- The bottom element uses 1 - 3/4" copper pipe. The top of the pipe has a removable sliding cap about 8" long which has a standard 3/8 - 24 antenna mount at the end.

- The top element is a standard 9' ss whip.

- The lower part of the mast is a 10' piece of steel fence tubing, which also acts like a choke to keep RF off the coax.

- Between the mast and the bottom element is a 2' length of *thick* PVC pipe to insulate the antenna from the mast. The bottom element sits about one foot inside the PVC pipe using modified fittings.

- The coax is RG-11 (75 ohm) and fed through the bottom element and the mast, using cardboard washers for spacers.

Notes:

- 50 ohm coax can be used without harmful SWR, however two methods were used to convert from 50 to 75 ohms. Tuning the radio works for a permanent install, or an impedance transformer (un-un) can be wound. I'm sure there are other methods.

- The easiest way to tune the elements is to adjust the top first for a dip, then tune the bottom by sliding the cap up or down for a bigger dip. Retuning the top showed no improvement.

- Noise was reduced by sanding the edges smooth on the bottom element, bare copper was polished and given a thin coat of polyurethane, and the antenna was then retuned.

- Measured performance is about 10% better than my A99 in both receive and transmit. SWR was nil.

- Total cost was about $20, less coax. The whip cost $10, and could have been fabricated for less.

Now I'm interested to find out how well two of these will work in a switched phase array. The second one will have to wait until the weather warms a bit -- froze my ass off working on this one!

Agreed, agreed, agreed.

> You'll also need a mount for it.
>
>A typical CB antenna uses a 3/8-24" threaded ferrule, and there are
>plenty of mounts that can accept the antenna.

I'd just like to add that the standard antenna mount allows the
antenna to be removed when not needed. I use a center-loaded whip
while driving and a 9 footer when parked.

>Antennas come in a variety of sizes and lengths. Choose one that is
>the longest acceptable to you and buy a good mount to hold it on your
>car as you drive.

Avoid mag-mounts and gimmick antennas (rubber-duckies, cel-phone
lookalikes, etc).

>Using a good antenna that is shorter than the recommended length of
>use, that being the 1/4 wave length, can still get you very adaquate
>performance. Even though it is shorter, and not as effective, you can
>still get good results. Brands like Francis, Solarcon, Firestik, and
>Wilson or K40 can get you on the air - preferences of the types I like
>are listed first in descending order.

I don't care much for K40 or other base-loaded antennas. Center- or
top-loaded is much better. Also, fiberglass whips can make funky
sounds at highway speeds.

>Coax? You'll need it for hooking up the antenna to the radio. Most
>people keep it simple, and use one CB antenna and a good mount for it.
>The typical CB antenna requires you to use RG-58 or RG-8, or RG-8x
>mini, and has a 50 ohm impedance to help provide the proper connection
>and operation of the antenna.

Don't use 'foam' type coax. It doesn't last very long, especially in
hot weather.

>Many mounts have connectors on them to make it easier to hook up coax
>to them, see above. You can buy coax that has sealed connections, and
>I recommend these to keep out water and reduce corrosion. They last a
>longer time and give you fewer problems.

Back to the mag-mounts: If you leave them on the paint for any length
of time, it will discolor and/or corrode the paint. If you drill a
hole in your roof, make sure that the sheet metal is strong enough to
handle the antenna -- if not, add an extra sheet of steel underneath.

>Radio? Features? Well, this could be the longest part of the message,
>I'll keep it simple - do a search for web sites catering to CB radios.

If you are just starting out, my suggestion here would be to keep it
as simple as possible. You can get a bigger, better radio later.
However, I would highly recommend an external speaker. It will turn
that scratchy noise-box into a usable communication device.

>> No where did I say it was my radio

>Suddenly it's not your radio

Hey aaron, get the shit out of your eyes and reread the post! I did NOT say this was my radio!!!!!!! Here it is one more time for you!!!

"Does anyone know where to get the small flush mount style resistors? SOMEONE BROUGHT me a Magnum delta force and tried to do the channel mod by soldering the 47k ohm resistor in place (Never got it there either) and in the process took out the small resistor next to it by hitting it with the soldering iron and said he lost it (They look really small!!!). So now I am wondering if anyone knows where to get them. Does rad shack carry them? Have yet to check. Also, What is the easyest way to put them back it (Type of soldering iron, ect...). They look kinda tuff to solder if you don't have the right stuff and I am willing to get it if I don't have it. Thanks in advance."

There you go! I said someone brought. Incase you want to know I did puchace this radio from him this afternoon and it will be used on unautherized freqs. just to piss you off. Sad when a person can't ask a simple question without someone being a jackass. No wonder I never post here mutch. Hey aaron do me (And probably most everyone) a favor and don't reply unless you have something to say that could help someone. Well, you have wasted enogh of my time for one day. Back to the E-Mail groups for this stuff. What a shame. Oh well, Untill next time.....

Oh yeah, Thankyou to all the people that responded with good advice and/or solutions.

API - Time Magazine reports an interesting case of high-tech graffiti.
It seems that a couple of Intel engineers working on the design of a
recent version of the Pentium microprocessor included a message that
describes their feelings about Bill Gates, president of Microsoft, a
good corporate pal of Intel's.
When a portion of the Pentium chip is examined under a powerful
scanning electron microscope, the phrase "bill sux" is clearly visible,
etched into the surface of the chip.

The "flaw" in the chip was only discovered by accident well after the
chip was released into the market, too late for Intel to prevent the
chip from being used in the manufacture of tens of thousands of PCs.

Intel says that both engineers responsible were former employees of
Motorola, makers of the chips that are the heart of the Apple
Macintosh.

Both engineers have since been fired by Intel.

Full picture on http://www.idt.mdh.se/kpt/billsux.jpg

If the Hams fried their brains on too much RF (whether high Freq. or low freq.), then DID the SAME thing happen with these BIG POWER running CB operators, did their Mod. kits or their 1kw or more FRY their brain, to make them sound stupid & hateful on my CB newsgroup? !!!
Dave!!!!!!!!!!!!!!

<jamesrhampton@my-deja.com> wrote in message
news:9503e7$t9p$1@nnrp1.deja.com...
Dave, I hate to suggest this since you will undoubtably get sick. Go read some of the amateur newsgroups (the misc is good for a start). The posts there are JUST as sick, if not sicker. My only guess is some of the guys fried their brains with too much RF. I don't know about 2 meters - I stick to 440 (usually 444.850 or 444.750). Sorry I can't help you - but I'm just as clueless as the rest of us are about this one!

73 From Rochester, NY
Jim
(ps - one of your problems has tried to create problems in the amateur groups also. I know it doesn't help, but misery sometimes likes company.)

Come on Dougie! Post away all you want Dougie, from wherever you want, Dougie. Your word is cow pie. I never said anything that I won't back up...unlike you Dougie, I have nothing to hide Dougie. I talk DX and I say so. Federal LAWBREAKER? You are again showing your ignorance of the matter you profess to crusade. Rules, junior, rules, part 95 RULES and REGULATIONS. And you still can't argue anything without the homo thing in all your posts. So, without further adieu, go ahead and commence with your hypocrisy, not mine, and while your lying self is attempting to digest that, ponder the original question posed to you...ahahaaaaa! Of course you can't give a care about what people think about you, the loathe never can. Haahahahhaha! Your just mad, Dougie, because your worn out, and d-o-n-e. Old hat. Yesterdays news. And there ain't nuthin' you can do about it. Don't that suck, Dougie?

Your'e not done yet! Seeing how you have lots of energy, here
are some variations to what you already have. I have posted on:

The group: alt.binaries.pictures.radio
The subject: Coaxial antennas, second try
This includes: coax_sleeve.jpg and col_coax.jpg

The col_coax pic should give you even more gain than you
already have.

The below message ID is the direct route to these files.

The first one looks like a franklin/coaxial mutant. I remember seeing
a 2m antenna like it that used multiple 1/2 wave sections of coax
connected shield-to-core. It was claimed that 5 sections would give
15dB gain in the vertical (yeah, right). The one in the pic looks like
it would be better suited as a horizonal dipole.

I couldn't get the second one, please email it directly or post it
seperately.

I noticed that. and you'll notice that the antennas I refered to are
designed for 11 meters therefore require no tuning. The ones that have
the tuning rings are PRE tuned to 11 meters when you buy them. I've
used them for years without any problems.

I'll agree with you on this.... bill gates does indeed suck, his
company was formed by the hard work of other programers. and with the
advent of the larger hard drives and faster proccessors the coding has
gotten very sloppy. there is no need for these programs to take that
much space. and there is no need for them to be that expensive.

Look at linux compare thje boxed set of mandrake, suse, ect. against
the price of microsoft 98,nt,me. Linux is alot cheaper, and ALOT more
stable. it is also getting to be very user friendly to newbies. and
redhat linux distro comes with some really cool radio programs and
engineering programs for designing electronics.

eeewps heheh I started to rant and rave in case nobody noticed I don;t
care much for microcrap and bill gates

ahh you use webtv... if you used a regular computer I was going to suggest a irc client like pirch or mIRC for winblows or Epic ircII, BitchX, X-Chat for linux/unix. and then go to undernet, dalnet and the other irc networks. Of course you can go to yahoo ect. with your web browser and start your own web based chatroom.
personally I prefer honest to goodness IRC chat networks. We used to have a channel on Undernet one of the largest networks called #CB-Radio. I'll look to see if it is available. if it is I might park one of my bots in it

Every day another ham stops by and makes the same remarks as yours.
Did you really think that you are contributing anything new or
significant with your post, or are you just trolling like the rest of
them?

This is not the first time this has happen. You can go back years and find
hidden messages in some of the old "DOS" system programs. Now days you have
"Easter eggs" in software etc. slamming other companies, and their products.

5121. FS: HR-2600 with Chipswitch

Newsgroup: rec.radio.cb
Date: 2001-01-29 05:07:33 UTC
From: Tate's Laptop <TateG@home.com>
Message-ID: <3A74FAF2.A80D8E30@home.com>
Source record: 71175
Cross-posted to: rec.radio.cb,rec.radio.swap,rec.radio.amateur

Time to get rid of this rig to make room and $ for new equiptment. The chipswitch was installed by a local shop, (www.chipswitch.com) The radio works perfectly, and is a 9.5/10 for cosmetic appearance. There is a small chip out of the upper right hand corner, and light marks where the bracket goes, it's perfect other than that.

Comes in the box with mic, mounting bracket, power cord, mic clip, manual, and the programmng manual for the chipswitch.

Asking $180 plus $12 shipping.

John;
Thanks for the reply. No, its not broken. I was just hoping to have a tech look at the schematic and possibly tell me why the recieve side is so much weaker than my old 148. The radio was tuned up by the same tech that did my old 148; but he is no longer around. Same antenna, same mic, then changed old k-40 out for a new wilson 1000, but it didnt get any better. I have not had a chance to look in the radio yet to see which board it has.

Hi group;
I am looking for a radio tech somewhere in the san francisco bay area that can tune a cobra 148f and a galaxy saturn turbo for me. The 148f has a "weak recieve" problem and the galaxy has been tuned by someone already and the power it puts out is "dirty". It is extremely "loud" but "splatters" like crazy. Even at low power (5-10 watts) and mic turned down it can splatter as much as twenty channels away. I would like to use the galaxy, but when it keys up, it fries garage door openers and completely tweaks the t.v's and stereos in the house. It can be heard through the stereo speakers when the stereo is turned off. I can just imagine what it does to my poor neighbors. I have put off using it because of this problem. If anyone knows of someone in the area that could help with this, it would be greatly appreciated. Thanks in advance.

Sorry, I don't know any techs in that area.

It sounds like the Galaxy has been modified by an idiot. Usually these
morons don't know how to solder and end up arc-weldeding half the
board beyond repair. If the board looks ok then it might be
repairable. But I would send it out to have it done right by a
respectable shop.

At least this particular one has actually passed a code test.

5144. CCD Antennas

Newsgroup: rec.radio.cb
Date: 2001-01-29 11:17:11 UTC
From: sparky@cet.com
Message-ID: <3a754b78.8156087@news.cet.com>
Source record: 71298

By request, this is a quick overview of the CCD antenna.

It is basically a 1 wavelength antenna that is chopped into sections of equal length, seperated by capacitors of equal value. The value of the capacitors is determined by the inductive reactance of the wire sections, which makes each section resonant. For 11m, the antenna length is about 36 feet, with 50 wire sections of 8-3/4" each, and 48 caps of 150 pF each. Fewer wire sections can be used, but that will make them longer and reduce the size of the capacitors.

Use silver mica caps if at all possible. Design it for the low end of the band, not the center. An antenna matching unit is highly recommended. Mount the caps on small pieces of wood, plastic, etc, and make sure that the connections DON'T MOVE or you will be up all night replacing the caps.

I have built two -- they take time and patience. The best setup for this antenna that I have found is to waterproof the AMU and put it outside where you want your antenna, plant your ground rod, hoist your antenna, match it, and run coax to the radio. The thing will work just about anywhere with good results. I even got decent reports with the antenna stretched out on the ground. They are ugly, but they work.

For more info, do an AltaVista search. And you might want to pick up a copy of HAMCALC, which will compute capacitor values and wire lengths.

That's not a 1/4 wave antenna, it's a 1/2 wave.

Mike,
It isn't an end fed antenna, it's a center fed one.

Kind of ironic. Insisting on following USENET rules, when the majority
of posters on this newsgroup routinely violate (and openly encourage
violation of) FCC rules with regard to radio operations.

People who do not respect the rules of one service are not likely to
respect the rules of another either. A consequence of modern
society.....

From alt.mining.rec:

The Lone Ranger and Tonto are camping in the desert, set up their tent, and are asleep. Some hours later, the Lone Ranger wakes his faithful friend.

"Tonto, look up at the sky and tell me what you see."

Tonto replies, "Me see millions of stars."

"What does that tell you?" asks the Lone Ranger.

Tonto ponders for a minute. "Astronomically speaking, it tells me that there are millions of galaxies and potentially billions of planets. Astrologically it tells me that Saturn is in Leo. Time wise, it appears to be approximately a quarter past three. Theologically, it's evident the Lord is all powerful and we are small and insignificant. Meteorologically, it seems we will have a beautiful day tomorrow. What it tell you, Kemo Sabi?"

The Lone Ranger is silent for a moment, then speaks. "Tonto, you dumb ass, someone has stolen our tent."

> thanks

Not worth the effort. I had a SS 3900 some years back, and just for the fun of it, I tried adding the second final. The results were less than spectacular. In fact I got better results from just converting the single final over to an MRF-477. After that, I could get about 30-35 watts out on SSB. Still not a major improvement over the 20 watts from the stock radio.

A more cost effective solution is to back the power down on the radio, and go for an external amplifier. The radio will be less stressed, you will sound better, and if the amp ever smokes (as they tend to do), you can still use the radio barefoot.

What you have there is a "classic" among popular, easy to mod radios.
That radio has the famous Uniden upd858 PLL, which, when modded can
cover from 26.085 all the way into the voice portion of the 10 meter
band, with the stock crystals.

Audio gain was phenominal. You could run a stock desk mike (like a Shure
444) and still be "loud and proud". There were many tricks that could be
done to tailor the audio section to the liking of the user.

The only real drawback is that the audio power amp chip (upc1156) is no
longer available. Should the chip fail, your options are limited. It can
be replaced by another type chip and rewired to suit, but it's tricky
and not every tech can do it.

If I understand it correctly, isn't the idea for the whole antenna to be
near the 377 ohm input impedance of the universe to minimize near field?
If it came anywhere near doing it, it would be the ultimate antenna for
attics and fence posts if it weren't so blessed long.

Twisty,

I'm not Doug.

But that's OK. You will counter-post vigorously for a while, then you
will declare you've "won" and you will stop posting. I, however, will be
here for the long haul.

So knock yourself out.

when i went up to chicago i saw a guy who had a 128 real deal, a 64
pill real deal, and assorted other units. he used 4 alternators, 2
200's and 2 250's and a shit load of batteries. the whole back of his
long nose was stuffed full almost to the roof with stuff, no doubt
about it. a very expensive hobby,.....cd is out........

It does sort of remind you of the schoolchildren breaking the Guinness record for strings of falling dominos; can you imagine a cascading failure under load?

Back in the days, a certain sport was rampant in the amateur ranks with 807 tubes. The 807 was the output tube in a lot of military command transmitters of WW2 vintage and essentially was a glorified audio output tube from Aunt Henrietta's console radio with about 30 watts plate dissipation. The object of the sport was to obtain maximum output from them. The final record was something like 840 watts -- 600s were fairly common. One, of course, had to use 807s as drivers as well.

As you point out, however, one bought 807s surplus by the dozen and used them for shotgun practice when you gronked them.

What you say about common mode currents on the outside of the
coax is correct but, while it does happen, I do not consider this
a standard CB radio scenario. I was not referring to this condition.

Also, I know no CBer that uses a balun.

> On the other hand, the usual claim is that 18 feet of coax is the

This statement is unsupportable. There is no way to say that 18 feet
is the worst or best length to control common mode currrents.

If I understand it correctly, isn't the idea for the whole antenna to be near the 377 ohm input impedance of the universe to minimize near field? If it came anywhere near doing it, it would be the ultimate antenna for attics and fence posts if it weren't so blessed long.

No. This is wrong. The impedance changes but the match gets no
better. All the impedances seen on the coax input by varying the
coax length are impedances of equally bad match.

> When we change the match, we change the amount of power delivered to
> the load. So by changing the length of the coax we change the power
> delivered to it, and therefore the power delivered to the antenna.
> Presto, coax length really does matter.

Wrong. Your premise that changing the input impedance changes the
power transfer is incorrect. While the input impedance does change,
it changes to another impedance which yields the exact same SWR and
the exact same power transfer.

Presto, coax length really doesn't matter.

> If you can't follow a progression that simple, I guess I could draw a
> picture . . .

Yes. Draw us a picture and give us an example with specific impedances.
You cannot do this. It is impossible.

You're both incorrect. You don't need 1/2 wavelength of coax for
an accurate SWR reading and this length is no better and no worse
than any other length for minimizing or maximizing currents on the
outside of the coax.

Most important rule -- Don't believe everything Sparky says.

Forget Rule No. 1

Rule No. 2 is an excellent one.

Rule No. 3 is also good but don't use your book as a reference
for claims that it doesn't actually make. For example, Sparky
claims his book says that standing wave in a transmission line
cause it to radiate. But it says no such thing.

Can I take a middle ground here, CLeP?? I have nothing particularly against VSWR bridges so long as they do not become TVI generators and open garage doors (seen both) but there are times and places in practical applications where they are far from the answer to the question.

For most mobile apps the SWR and max FS are close enough together to be negligible. But the SWR bridge is useless for, say, tuning a quad reflector where I have a choice of forward gain and max F/B that are not only not the same but have no SWR effect at all.

The Lone Ranger and Tonto are camping in the desert, setup their tent, and
are asleep.
Some hours later, The Lone Ranger wakes his faithful friend.
Tonto, look up at the sky and tell me what you see.
Tonto replies, Me see millions of stars.
What does that tell you? ask The Lone Ranger.
Tonto ponders for a minute.
Astronomically speaking, it tells me that there are millions of galaxies and
potentially billions of planets.
Astrologically, it tells me that Saturn is in Leo.
Time wise, it appears to be approximately a quarter past three.
Theologically, it's evident the Lord is all
powerful and we are small and insignificant.
Meteorologically, it seems we
will have a beautiful day tomorrow.
What it tell you,Kemo Sabi?
The Lone Ranger is silent for a moment, then speaks.

Tonto, you Dumb Ass, someone has stolen our tent.

You are so right - but they are pulling the plug on further
development in the "small user" market.

But fortunately there is a White Knight.... Serenity Systems is
OEM-ing OS/2 client as a product called eComStation. Users of
that product say it continues where Big Blue left off at FP 15
and are very enthusiastic about it. It's bundled with updated
application suites and drivers, installs from CD, and is available
from Indelible Blue on a special upgrade deal for present OS/2
users.

Straight from the ARRL.....

ARRL Board of Directors' Resolution on Morse Code
On motion of International Affairs Vice President Stafford, seconded by Mr. Frenaye, it was MOVED that the following resolution be adopted: WHEREAS, Morse code, named after Samuel Finley Breese Morse, is an invention that has been essential to telecommunications for over 150 years; and WHEREAS, the international Morse code has been an essential mode to Amateur Radio from its beginning to this day; and WHEREAS, Radio Amateurs formed a pool of skilled Morse operators vital in the 20th Century for national defense, disaster, maritime-mobile and aeronautical-mobile communications; and WHEREAS, since the 1950s there has been a great influx of other technologies that have gradually reduced the need for trained Morse operators outside the Amateur services; and WHEREAS, the aeronautical-mobile and maritime-mobile applications of Morse have been or are being terminated throughout the world; and WHEREAS, there is an agenda item for the 2003 World Radiocommunication Conference to consider Article S25; and WHEREAS, it is highly likely that administrations will delete the Morse code requirement in Article S25 at WRC2003; and WHEREAS, the international Amateur community has followed the United States lead in reducing the code speed requirement for licensing to operate on bands below 30 MHz to 5 words per minute and there is a trend toward elimination of this requirement; and NOW THEREFORE BE IT RESOLVED, that the ARRL Board of Directors recognizes and accepts that suppression of the Morse code requirement in Article S25 is likely to occur at WRC 2003; and be it FURTHER RESOLVED, that deletion of the requirement from Article S25 should not automatically or immediately mean a similar removal of the Morse code from Part 97 of the FCC rules; and be it FURTHER RESOLVED, that each administration should determine if Morse code is retained as a testing element; and be it FURTHER RESOLVED, it is the opinion of this Board at this time that Morse code should be retained as a testing element in the U.S.; and be it FURTHER RESOLVED, that the Morse code is deserving of continued support as an important operating mode including providing for the protection and maintenance of sufficient spectrum in band planning; and be it FURTHER RESOLVED, that staff develop a program designed to promote the use of Morse code; and be it FURTHER RESOLVED, that this resolution supercedes all previous statements of policy related to suppression of the Morse code requirement in Article S25.

Source record: 71205

Richard,
I don't know about the 'impedance of the universe', but
you will definitely need a tuner to use the CCD antenna.
Another 'nice' feature of this antenna is that it's
shape isn't critical at all. Just don't fold it back on it's
self. 'Snake' it, zig-zag it, bend it into a circle, they'll
all work. Another property is that it can be used on any
frequency/band higher than the design frequency. Not too
important for single band use, but a very handy thing!
Instead of one large current lobe like most antennas, the
capacitors 'break' this lobe into multiple small lobes over
the entire length of the antenna. That decreases 'end effect',
too.
I've made two of these things for the low HF bands and
they both worked very well. The down side is that they are
difficult to build, expensive, and big.
'Doc

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1209768564

Sony ICF-2010
covers AM (LW/MW), FM, Shortwave (w/USB & LSB for SSB)& Air continuous coverage from 150-29999.9Khz, 76-108Mhz, and116-136Mhz dual conversion receiver with quartz digital synthesis tuning
32 programamble memory presets
tuning: direct entry keypad, memory scan, or with dial
fast/slow dial tuning with lock setting to prevent accidental station change syncronous selectable sideband tuning on SW to eliminate interfernce on ajacent frequencies
narrow/wide bandwidth switching
clock w/ 4 programmable timer (alarm) settings and sleep button
LCD read out for frequency, time & memory channel number
green& red led's for battery level indicator and tuning meter includes: external antenna w/ jack adapter, ac power adapter, sholder strap, and owner's manual
requires 2 'AA' batteries for memory & cpu & 3 'C'batteries for portable operation
This unit is in perfect operating condition. Minor cosmetic imperfections: there is a bit of dust under the display glass, some small scratches can be found on the unit, and the attached telescoping antennais missing its tip.

Guaranteed NOT DOA. Buyer to pay actual UPS shipping plus insurance.
Paypal accepted.

I don't think that was the intention. CCD stands for Constant Current
Distributed, or something like that. I think the idea was to
distribute the current evenly over the entire length of the antenna,
maximizing the length of the current-carrying portions and eliminating
high-impedance points. It makes a very low noise antenna.

>If it came anywhere near doing it, it would be the ultimate antenna for
>attics and fence posts if it weren't so blessed long.

I have one of mine hanging in the attic and it works great. It doesn't
even need to be straight -- that's why I thought about making a CCD
loop.

Now you are just dribbling. I was very clear about what I was speaking
of, and you already agreed with it (the radio/coax match).

You refuse to test any of these things for yourself. You refuse to
accept authoritative references. I used your own words against you,
and now you are defying logic and common sense by disputing your own
words. You have nothing left in your argument drawer. You are a troll.
Crawl back under your bridge.

No. There is a hard core group who intend to hang on to Morse Code, as a test element at any cost, even if it means a decline in the number of Amateurs. The current Board of Directors reflects that attitude. What is really needed is for more Hams to join the ARRL, and express their opinion that Morse Code testing should be removed, as a mandatory test element, once the ITU S25.5 treaty requirement is removed at the next WARC. The best way to change the ARRL's Board of Directors position is by joining the ARRL, and writing your division director.

While I don't believe in Morse Code testing I am not against the use of Morse Code on the bands. Since it is popular with a group of Amateurs there is no reason to remove it from the band plans, and as some point out it does have its uses. However Morse Code should have to stand on its own merits, the same as any other mode in current use. Mandatory testing can not force people to use Morse code, after the test, if they have no interest in doing so, and there are a significant number of Hams who think this way, some of whom have already passed the older Morse Code exams.

Hi,
I bought a 2nd Hand Alinco DR-430 TE4 and from 400.00 to 439.800 MHZ the display flashing and than from 439.825 MHZ to 512.00 MHZ the Display are normal for
programming.
Maybe somebody of you has the some Radio and can explain what's happening.
I thank you very much for your time and I hope you can help me, because I am from Australia, Coober Pedy and have to trust my radio.

Good point Jeff. The ARRL BoD did what the board of any membership org
would do. This is only slightly less surprising than sunrise.

As this NG has certainly found out, there are reasons for maintaining an
arm's length relationship with the militant codeless contingent. Why is
it a shock that the Amateur community feels about the same way you do?

>
>Dick Nï¿½BK
Not a single 807 I hope, surely not?

I was raised around this ubiquitous tube, we call them valves over here.

AM broadcast transmitters were used by all the pirate stations in the
70's before FM became popular.

In fact we still have a London AM pirate using an 807 rig with a solid
state modulator.

With around 600v on the plate (anode over here) we typically had around
30w rf out.

What plate voltage did you use and what kind of current draw?

Doesn't affect me either way. While the need for Morse has unquestionably diminished, I can't help thinking there *might* be a reason for preserving bandwidth for it. I know this might be a "quaint" idea, but even tho our military has abandoned it, other countries such as China are still using it. I hope I am wrong in this "hunch", but one day there might be a war with who knows whom. It *could* be a good idea not to relegate it to the history bin yet. I can see the many arguments for abolishing it as a requirement, but I wouldn't like to see it forgotten altogether. I guess I am sort of a "pack rat" with the thinking I might not ought to throw "that" away because I might need it later. I don't really care what WRC does about it as a requirement. I may be one of those who didn't have as much trouble learning it as some others, so it became a fun way to QSO. I didn't really WANT to learn it at first, but when I did, I found myself up later at night that I should've been calling that last CQ! It really is FUN once you learn it. I realize that everybody is not interesting in learning it as well. While some may cling stubbornly to it as a way to keep out "riff raff?" and keep ham radio as some sort of "elite" club, I don't have an opinion on the status of the code. I admit that, since I already learned it prior to the gradual removal of CW as a requirement on some bands, it may seem like...well, what's the big deal to me whereas, to someone else, it IS a big deal.

Lastly, can't we express our opinions without insults? Come on, give the hams *some* credit! After all, when someone graduates from college, wins a tournement, it is human nature to be proud of one's achievements. It's how you *present* those achievements to others that determines how one is received. Amateur Radio IS an accomplishment regardless of how involved or easy the tests are. It is what you MAKE of it and how you present it to others that counts. What is great about ham radio for me is that I have LEARNED a great deal about radio from it and it isn't about yak, yak, yak all the time. It's learning to build something and having the satisfaction of having it work, or making a boo boo and learning NOT to make the same mistake next time. Code or no code, that's what's important to me.

I don't think that code should be eliminated for HF because of the possibility of emergency calls. There are still a lot of CW rigs and they have been used for emergencies since the Titanic. If an operator cannot read code, not only can he not respond, but he might not even yield the frequency.

I have pics of 2 64 pills side by side

5231. LONE RANGER & TONTO: PART 2

Newsgroup: rec.radio.cb
Date: 2001-01-29 23:50:37 UTC
From: GMpartsdude <GMpartsdude@home.com>
Message-ID: <hlnd6.162293$P82.19559770@news1.rdc1.ct.home.com>
Source record: 71235

On a hot summer day, The Lone Ranger and Tonto ride into town, and stop at the saloon.
The Lone Ranger starts walking into the saloon and tells Tonto to fan Silver with a blanket to cool him off for a few minutes. Tonto promptly starts dancing around the horses, waving the blanket too cool them down.
A short time later, the Sheriff swaggers into the bar and walks up to The Lone Ranger, asking who owns the white horse outside. "That horse is mine.", says The Lone Ranger, "Why do you ask ?".
"Because you came in and left the Injun running !"

phil I say shits and giggles because really it is something to laugh at watching guys try to run a amp that big they would be much better off running a 64 pill getting full power which would take about 8-10 min 250 amp alt's rather than run a 128 pill 1/2 assed and seeing the same watts as the 64 pill.... 20 amps draw per pill x 128 = 2560 amps not including the 32 pill driver x20 amps per pill = 640 amps plus the 8 pill driver for the 32 pill which is about 8 x 20 amps per pill 160 plus the driver for the 8 pill 40 amps ...so 2560 +640 + 160+40= about 3400 dc amps would be needed in total. Thats a real crankshaft breaker if I ever saw one. Lets not get into the horses required to run this beast. to me it is a lesson in futility.

Steve Ballmer may succeed where Bill Gates floundered. Linux is catching up to Windows but is far from having it "caught". Windows has always been "a piece of crap" in the eyes of some, but that's true for any O/S, too.

Having done punch cards on IBM 1620s and System/360 (when a "green card" was a programer reference card), I can tell you what "a piece of crap" REALLY is! (cringe)

;-) don

In article <3A75DA68.A173C83A@IEEE.org>, Cecil.A.Moore@IEEE.org was of the opinion...

Every single one of your posts since the beginning of January have been sent to...one guess, junior, along with an invitation, from yours truly, to you know who, to call me at anytime to discuss the dialogue and content of a disgruntled hammie, such as yourself, and yes, I DID include my real name and phone number.
Again junior, in keeping the good faith of exposing you for the fraudulent, porn obsessed, sexually confused, frustrated, and disoriented gender bending troll you are and trapping you in your own lies repeatedly, here is the obvious once again.

1) See prior explanation concerning use of sexual terms.

2) You would do nothing of the sort, should you ever be so fortunate as to be graced with my presence. As all bullies, cb rambos, and true clowns that hide behind the mic, you would be reduced to the same unfortunate, pathetic loser that can not control his emotions on a news forum.

3) Invective? Show me one instant that could be considered invective, that is not true. If you take issue with it, (obvious you do, or you would not have mentioned it), then , once AGAIN, your sheer hypocrisy radiates and illuminates you...what was it, junior, "me think thoust protesteth too much?" (chuckle) Touche' junior.

4) To relax, some watch tv, some listen to music, some drink scotch, some drink a beer or two, some burn a jay, some beat their wife and kids, some go to the gym, some make porn web ages all day and obsess (cough, cough). If you would pay attention for a moment, just one lucid moment, you would see I tune in to you twice a day. Once in the morning, to get a grand, shining, laughing headstart on my workday...and once when the work is usually done for the day..to unwind and keep me laughing. But you're too all-consumed with how you are going to do your next porn site to realize when you are being used or laughed at. All the funnier. Only moaning I see is coming from you and your imaginary playmates (snicker).

5) See number 3

6) Stop you? Again, you demonstrate your perverse and dogged ignorance. I'll say it again, I DON'T WANT YOU TO LEAVE. My productivity is soaring and the one employee I do work with here all day hears me laughing like hell outloud and runs in to see what I'm laughing at and when I show him, he thinks I'm nuts, but that's ok. It works. BEfore you came I had subscribed to the joke a day thing, but since canceled. Thanks Dougie, sincerely, no, really!

7) Speaks for itself.

Actually, BigBoy, PeeWee is a friend of mine....(you probably have to look
that one up, i.e. you have none!) As for his dirty work...you are no kind of
effort! Consider this, I spanked your big ass with a stock 12volt 5pil
DAVEMADE, one antenna....Well, next time we meet you'll need a cellphone to
call someone, because that is the only way I will let you talk!!! If your
not scared, let me know your handle in DX....if I ever hear anyone say your
name in DX you'll be done talking! No idle threats here...only truth. Speak
up bigboy.....you know my handle, I dont have to hide behind an a.k.a or a
nickname....put it out there for me to see, as I said, unless your scared!
321 mobile western Maryland and I just got down!

5259. Selcall instructions for Sigtec or Sigtone?

Newsgroup: rec.radio.cb
Date: 2001-01-30 01:25:25 UTC
From: test@NOSPAMness.com.au
Message-ID: <3a7616b9.2770364@news.syd.comcen.com.au>
Source record: 71934

I have a Selcall board and would like to reprogram it to slow down
and/or change the code. I was told the maker is probably a Sigtec
(SP?) or a Sigtone (SP?).
Can anyone direct me to instructions for controlling this board? The
only other information I have about it is it uses a MK15153N-00 chip
(?) or is it Sigtec SC-02.

Actually, the soundtracker feature DOES work on signals from non ST equipped units. A non-ST equipped unit will be able to tell the difference between the button in the ON position vs the button in the OFF position.

However, 2 ST equipped units sound terrific. If you havn't heard the difference ST can make on weak signals by supressing the noise and raising the audio above the noise, you can never know how nice it is. And yes, you can tell that the signal is being processed. I like the feature, and unless the guy i'm talking to has put so much echo or has overmodulated his signal to the point you can't understand him anyway, the ST does not anywhere NEAR mess up a signal like echo or overmod.

And I love the nightwatch feature. wonderful.

WHAT does this have to do with CB radio, other than the 28.0-28.? code
ending so CB can EXPAND to over 100 channels?
Dave!!!!!!

:That does not support your claim that coax radiates when there are
:standing waves. You cannot support this claim. Period.

Whether there are standing waves is immaterial. If there is an rf
current on the outside of the coax, then the coax is radiating.

I am glad you said it, saved my tying fingers. Most the people that run these amplifiers don't have the firepower to run a 64 pill. I get a kick out it myself. Not to mention that most of them don't have enough watt meter to tell em what its doing but they all claim big numbers.

Phil,

Although I don't have a pic, there was a 192 pill X 2879 box in a truck in the Sacramento area in the late 80s / early to mid 90s.

Was a hell of a signal generator, lemme tell ya!

I know of a Golden Falcon 1X4 tube mobile using 8950s in Chicago that did 3K PEP output...

The 8950 is a 30 watt dissipation tube, as well.

5294. The 3 biggest Gayboys write a book...

Newsgroup: rec.radio.cb
Date: 2001-01-30 04:38:12 UTC
From: "The REAL N8WWM", "not the trashy fake." <noillegalop@my-deja.com>
Message-ID: <955gfk$7f3$1@nnrp1.deja.com>
Source record: 71252

Special announcement about the 3 special kids!
Folks, you need the following book...Twistie, tnom and Scottiekins
have, with adult supervision,
drooled into a dictaphone the following masterpiece of authorship and
it is now available at your
local book store...Don't miss "Muskrat Love", the heartwarming story of
3 illegal CB'ers who find
love and marriage through uniting in hatred for N8WWM, the mean 'ole
hammie they wish they
were 1% equal to in quality of flame issues.
While their Sparkomatic and 2 pill amp combo splashes all 40 channels
and into 10 meters, listen
to the 3 sweet little CB'ers plot, plan and generally scheme to out
flame the greatest flamer of all
time. Read about their use of electronic components as aids to their
sagging libido's. Learn why
no female relatives ever come to visit. Look at the special 13 page
photo insert that shows the
dried snot on their microphone! This and much, much more.

Folks, this book is on par with the smash hit "I am faithful to my
wife", by Bill Clinton, and will
become recognized as a major literary accomplishment. The trippin' trio
have outdone themselves
this time, and you have just gotta read it to believe it. Only 29.95
now at your local bookseller!

I don't know what the fascination is with transistors for a lot of power. I saw a 32 pill advertised - something like 3000 watts peak and the price was up around the same figure too ... There comes a point where it is easier to use a 'bottle' than a 'pill' (ie; tube vs transistor). I don't know what typical prices are, but suspect that once you are up above the $3000 price range, it would be cheaper and easier to buy a tube amp. Those 32 pills with 3000 watts would be buried in a heartbeat by a single 4CX-10000A (not that you could buy such an amp for $3000). A single 8877 is rated at 1500 watts plate dissipation - which would imply a maximum for a single 8877 tube close to 3000 watts out with 4500 watts in .... Probably the fact that commercial amp manufacturers don't sell the higher power stuff to just anyone makes them difficult to obtain (Henry had some 3000 and 5000 watt units out in the '60s, but the amateur community would not have bought anything more than the Henry 2K, capable of maybe 1200 watts output - which was excessive in those days anyways).

Installations varied but the trick was to run them so far into Class C
they never had a chance to get all that hot. Lots of stages. I wasn't
all that old at the time so I was not a participant in the sport. Had a
guy I talked with on 50 MHz who was so I got the fill-in every time the
band opened.

For whatever reason, I never had a lot to do with 807s but rather with 1625s the 12 volt version and I ran closer to 750 on the anode with about the same results you mention.

Now an 807 is a beer. And you have to be of mature years to know that.

Dick

Check stop!

If you had the single RAMAC disk on a 1620 it was a 1710.

OS360 came out when the Kingston Trio was big. Became known as the operating system that never returned. Spent so much time housekeeping that it only rarely came around to do any useful work. Now that was bloatware.

The kits from cbc intl are good. I would have them installed when you take it in for alignment. I have used them and found no loss or slight increase in sensitivity with the on board amplifier stage they have.

Very good post! Mandatory testing has not forced me into studying electronics theory but I have put together a project or two. Morse code is the same way. You don't HAVE to engage in it after the test, but at least for the moment you're given the experience and tested on whether you know that part of the hobby. I say it's all worth keeping!

>pill driver x20 amps per pill = 640 amps plus the 8 pill driver for the 32
>pill which is about 8 x 20 amps per pill 160 plus the driver for the 8
>pill 40 amps ...so 2560 +640 + 160+40= about 3400 dc amps would be needed in
>total. Thats a real crankshaft breaker if I ever saw one. Lets not get into
>the horses required to run this beast. to me it is a lesson in futility.
Surely in that class, DC sky, you onto a multi alternator thing anyway
so you might as well run 8 E-350 Electrodynes just like the big boys in
AC.

I don't see a problem unless the engine back-fires and you lose speed to
spin them generators.

If the truth be known, everyone wants to be king of the hill.

I've noted over the past year or so on the ng that 250A alternators seem
far more popular than the big Electrodynes. Is this because of the cost
differential.

Personally I had been running a single 200A Leece and wanting to upgrade
I went for the highest output unit I could find second to a military
Neihoff which would of bankrupted me. I do not like 'Mickey Mouse'
alternators.

Phil / London

Thanks. You got the point, you do something because you want to do it, learn more about the subject, and the motivation comes from within, and not from some external requirement.

The point, which seems to be lost on the hard core Morse Code test advocates, is the test is a one shot deal. Once you pass the test, lets say the old 20 wpm Extra, there was nothing to ensure the continued Morse Code proficiency of the individual, zip, nada, nothing. Everyone knows that a skill, unless practiced with some regularly, will diminish with time, and Morse Code is no different. It seems really silly to me to require a Morse Code test, then let the operator loose on the bands for the rest of their life, and NEVER check their proficiency again! I'll bet there are old Extra Class Hams out there, licensed years ago, who can't even pass the new 5 wpm Morse Code exam to save their life.

The faulty logic with mandatory Morse Code testing is if the individual passes the test they will continue to use it. Not true! There are plenty of Hams who will admit they passed the Morse Code exams just to get on H.F., and then promptly quit using it. As far as they were concerned it was nothing more than a "check-off" item. These same Hams will also admit they can't even copy their own call sign in CW after some years of non-use of Morse Code.

Yes Morse Code has its uses, but mandatory Morse Code testing does not guarantee a pool of proficient CW operators long after the tests are taken.

Yes, it speaks for itself Dougie, boy. YOU speak loud and proud, believe me when I tell you we ALL are quite aware of what you are. Only thing that makes my day better than laughing at your loser attempts to butcher what I say into your wildest homo fantasies is looking at your girthy ass picture and rereading the caption where you say one side is before the weight loss and one after...they are EXACTLY the same hahahahahhaahahahah!. No, no matter what you say in your post Dougie, you DID NOT lick anything even resembling what you so couthly referred to as my "nuts". I have no problem with live and let live Dougie, you can do whatever ya' want, but if the day ever came when your homo ass even tried to get near me with thoughts like those, fat would be the least of your worries. You get me riled? HAhahah! Who is talking trash about, "meet me at Dayton, @#&**@#!" HAHAH! Face it Dougie, you are a loser. A Loser Dougie, with a capital "L". You wear it like the scarlet letter on your forehead...hahahahahah! You still don't get Dougie! Ya' know why? "Cause you're a Loser, Dougie! HA-HA-HA! And you are a paranoid, schitzophrenic, PATHETIC, pathalogical, LYING loser. And in your most famous quote of all, (chuckle) "AND THERE AIN'T A DAMN THING YOU CAN DO ABOUT IT" HEheheheh!
Go play in porn, Dougie! HAhahahha!

Message-ID: <5mgGZnAdAud6Ewci@invest.fsbusiness.co.uk>
Source record: 71630

I've been offered a Jennings 3-30pf 10kv vac variable.

How much should I pay for one in used condition (I'll of course try and get it Hi-Potted)?

This will be used after a YC-175 Eimac tube at around 10kw peak output.

Finally, any idea what minimum current rating would be needed?

I am just collecting components, not building the amp so am not sure of what mathematics I require for this last equation.

Tnx

Phil / London

Good analogy.... one could stretch it a bit further and say that mandatory testing on operating practices, rules, regs, and frequency assignments have not forced anyone to abide by them, so why test at all? <grin>

BTW... the argument that the military has 'done away' with code is another myth.... The truth is they just don't 'use' it any more. Military radio ops are still REQUIRED to learn code, even if it's not in regular use. The First Class commercial radio ticket STILL requires code.

....Just as testing for rules, regs, radio theory, operating procedure, and frequency assignments does not guarantee a pool of proficient radio operators after they pass what are now insanely easy exams......

Why not eliminate testing altogether? <facetious grin> ... just carrying your argument to it logical conclusion.

Hi Mike,

You can buy dead/parts radios off Ebay all the time. If your looking just to replace the meter movement, you can buy that type of meter movement in most better electronic part houses. (or order it pretty fast).

The meter scale can be swap'd out with original, I've done it many a time. Most of the time, the movement value is 0 to 1 mA types. You might be sure to check the calibration of the PA Cathode current function with a fluke multi meter.

I'll also use this follow up post to throw out another cheap plug for the siltronix web page located at:

http://sonic.ucdavis.edu/siltronix

If you'd like to see a picture of the original prototype 1011 radio, it's been found and photographed. Lot's of history and interesting information... best yet, it's all free.

cheers

An executive was in quandary. He had to get rid of one of his staff. He had narrowed it down to one of two people, Debra or Jack. It would be a hard decision to make, as they were both equally qualified and both did excellent work.

He finally decided that in the morning whichever one used the water cooler first would have to go.

Debra came in the next morning, hugely hungover after partying all night. She went to the cooler to get some water to take an aspirin and the executive approached her and said: "Debra, I've never done this before, but I have to lay you or Jack off."

Debra replied, "Could you jack off, I have a terrible headache."

Mildred & Alfie

Mildred and Alfie knew each other from childhood but were in their nineties when they got married. They had to wait for Mildred's mother to pass away first.

Back in those days there was no hanky panky before marriage so Alfie and Mildred were both still virgins.

Needless to say Alfie was pretty excited on their wedding night.

Having waited so patiently all these years. However, Mildred was very apprehensive as she had developed a heart condition and would have to tell Alfie that they could not do it.

Alfie is now sitting on the bed wanting Mildred to hurry up. He detects a little reluctance on her part. Thinking that she is shy he sends her off to the bathroom to get undressed. When she reappears in her silk sateen nightie he, gets her to sit next to him on the bed.

Not knowing how to get things started he pulls the first strap on her nightie. She blushes just as red as her silk sateen nightie. She is really concerned about telling Alfie about her heart condition.

In the meantime Alfie is looking at the first breast he has seen since his own mother's. It is hanging there down to her belly button; gravity having taken it's course over some ninety years.

He realizes her anxiety, but figures she is going have to be helped a little more. Now he pulls the second strap and sees the second breast unroll downward before him.

Poor Mildred is now beside herself. She is going to have to tell Alfie about her heart. With a quivering voice and mustering up all her courage, she says "Alfie I have acute angina".

Alfie says, "I sure hope so. Your tits look like hell."

Hi Tim,

As stated on the http://sonic.ucdavis.edu/siltronix web page, the siltronix has a high impedance input. It would like to see something like a non powered D-104 cartridge. Low Z mic will work ok to some extent, but you and everyone else will notice the difference with the high z crystal type cartridge.
cheers

It's not as stupid as it sounds, given the current state the written tests are in. Some have even proposed the same thing as you. The whole issue with Morse Code testing is it's the ONLY test you can't really cheat on, and thus the only skill the procode test advocates can feel good about passing. That's why they want to keep it so bad. The written exams are joke since the correct answers are all published. No glory in claiming you passed the Extra Class written exam when a ten year can do it, after memorizing the correct answers, and still know almost nothing about radio or electronics afterwards. You'll see far more Hams argue about keeping the Morse Code exams as a mandatory test element than advocating cleaning up the ridiculous testing situation. I'll bet that many of those procode test advocates can't pass the written exams without memorizing the answers first!

You missed the joys of the state-of-the-art AN/FSQ-31 which
was 2 IBM 7090s back-to-back .... with a 2-ft diameter disk
holding 128K that took 21 KW of manufacturer-required air
conditioning to make 75 degree +/- 2 degree air, while the
device operated in a computer room where the air was closely
held at 75 degrees +/- 1 degree per IBM specs.

The air handling system for the 'Q-31 had a 2-minute capacity
and a backup generator rated at 750 KW which could only make 2
starts in that time. Prime power had 4 - 375 KW rotary no-break
machines but SoCal Ed in their infinite wisdom only provided a
300 KVA transformer for patch-around when one of the no-breaks
were down for maintenance.

Ah the good old days of "Peace is Our Profession" (SAC - 1960s)

I've got the Imax 2000; very good performer. Both antennas are so similar, you probably won't see any difference in performance. The ABS-1600 is supposed to be tough as nails though. Here in Ohio, we see extremes in the weather. Hot and humid summers, cold and wet winters, very windy springs. The Imax has held up fine.

The ABS-1600 is nearly twice as expensive. I don't believe it has the tuning rings either.

I'd invest the difference in cost in quality coax and quality mounting as high as possible.

No dribble here. I am referring to the match between the radio
output impedance and the input impedance seen at the coax.
You were clearly stating that changing the coax length changes
the match which, in turn, changes the amount of reflected power.
And you are unequivocally incorrect.

The match is NEVER improved by varying the length of the 50 ohm
coax.

> You refuse to test any of these things for yourself.

I've performed countless RF measurments over the years. None of
them support your factually-lacking claims.

> You refuse to accept authoritative references.

There is none that supports your claims. You even have lied
in an attempt to create one.

You have done no such thing. Once again, you are incorrectly
taking statements out of context. It illustrates your lack
of understanding.

> You have nothing left in your argument drawer. You are a troll.
> Crawl back under your bridge.
>
> Sparky, FLRC

Hee hee. I'm a troll with the facts. You are a liar with old
wives' tales.

By the way, you conveniently snipped my challenge to support your
claims with ONE SINGLE EXAMPLE. YOU CANNOT DO IT!!!

Let me restate that challenge:

I wrote:
> > Draw us a picture and give us an example with specific impedances.
> > You cannot do this. It is impossible.

If you were half as smart as you would like us to believe, surely you
could come up with one example to support your claim. Give us one
example how you can improve the match to a 50 ohm radio by varying
the length of 50 ohm coax.

We're waiting. Put up or shut up.

I'm looking up Sparky in the dictionary:

Sparky n. (Spar-kee) 1) dumbass 2) one who attributes fiction to
references that don't actually say what he claims 3) one who talks
in circles without ever providing supporting examples or genuine
references 4) one who believes that standing waves in a transmission

line cause it to radiate 5) one who believes he can improve the match to a 50 ohm radio by varying the length of a 50 ohm transmission line.

5405. Aaron Voobner FAQ

Newsgroup: rec.radio.cb
Date: 2001-01-30 18:57:59 UTC
From: "Mr. Aaron H. Voobner" <aaronvoobner@my-deja.com>
Message-ID: <9572rihpg1@nnrp1.deja.com>
Source record: 71607

VOOBNER FAQ

-Who is Aaron Voobner?

Aaron is a guy who responds to the supporters of illegal CB, many of whom dominate the rec.radio.cb newsgroup and otherwise attempt to intimidate proponents of legal CB operation.

-Are you a real guy?

Yes, Aaron is a real guy and his name really is Aaron H. Voobner. Despite being the subject of a *desperate* search by illegal CB'ers in the USA, his personal information remains readily available on several legitimate databases.

-Is Aaron Voobner N8WWM?

No. I don't use profanity and I don't post porno.

-Why do you hate illegal/outlaw CBers?

Their big amps screw up the CB band for other users. Thier stealing channels from government and hams is just plain dishonest. Plus, their antics draw heat from authorities onto legitimate CB users.

- So why don't you just make your point and then go away? You're being "rude" to illegals by contantly poking your nose where it doesn't belong.

Reason #1. I don't respect people who have no respect for anyone else.

A new breed of "outlaw" CBer came along recently: folks with no respect for any one or any law. Folks who think they have a "right" to operate illegal CB and not be criticized for it. These "anything goes" people took over the CB band from the fine folks who were there for decades, and in many cases forced them off the air. These are the same idiots who post amp and freeband crap in the newsgroup and are rude to anybody who disagrees withe them.

Reason #2. Idiots need to be told they are idiots, until they stop being idiots.

The reason there are 5,000 watt amps on your local CB channels is because people tolerate it. No one dares complain. Everyone minds their own business. No one wants to get involved. The idiots get "respect" -- so they proliferate.

- But you're just riling up the illegals and making them angry. That's not being a responsible person.

There is nothing responsible about operating illegally. Illegal CB operation is done irrespective of FCC Part 95 and it's intended purpose. Loudmouthed, irresponsible individuals who promote illegal CB operation deserve little, if any respect from legal CBers. They give legal CBers a bad name in the eyes of the public.

-You're driving CBers away from the amateur radio hobby by making them hate hams.

I am not making anyone "hate hams" because I am not a ham myself. And it is doubtful that CBers who openly despise the FCC, flaunt rules, and have no consideration for other radio ops would be good "potential hams".

-You can't stop people from posting. It's perfectly legal to talk about illegal CB.

I don't try to stop anyone from posting. Talking about illegal CB is protected under the US Constitution under Freedom Of Speech. However, my criticism of illegal CB is also protected. You don't like it, don't read it.

-But you accuse innocent people of operating illegally.

I don't "accuse" anyone. I ask questions. And in any case, I have no authority to arrest or prosecute anyone, so why be so paranoid?

-But it's slander.

You mean libel. Slander is spoken. Libel is written. I hardly think it's "libelous" to ask someone who just finished bragging about "dropping the maul" or "calling CQ on 555" if they are an illegal CB'er.

But if you think you have a case against me, you are welcome to pursue it. Your attorney will quickly tell you that you can't sue someone who calls you an idiot or disagrees with you in a Usenet newsgroup.

-So why don't you go to a CB coffee break and harass people?

I reserve the right to choose my own methods, thank you. I also express my opinions to legislators, auction sites, equipment manufacturers, amateur radio organizations, law enforcement agencies and public officials.

-Are you a wanna-be RF cop?

Nope. If I was, I'd be in here harassing people about antenna height and the 150 mile limit. That's Barney Fife, not me. It's not RULES I'm concerned with. It's illegal CBers BEHAVIOR. It's inconsiderate behavior of selfish idiots - who just happen to be breaking FCC rules.

- But illegal CBers are just bending the law. Like the Minutemen of the Revolutionary War. Or Rosa Parks during the Civil Rights protests.

Give me a break. There's nothing NOBLE about stealing frequencies that do not belong to you or locking up your local channels with a 1KW amp.

If you truly wanted to effect legislative change, you'd do it within the system.

-Are you a flamer?

No, but if I'm flamed, sometimes I'll flame back. Depends.

-But you're screwing up the newsgroup.

I'm sorry, but this newsgroup was screwed up LONG before I ever came. And if my opinions about legal CB "screw you up", then you have bigger problems than me.

-Can't you realize that your anti-illegal CB postings are useless?

Perhaps. And perhaps not. It is hoped that continued criticism of and opposition to illegal CB practices (such as "keydowns", CB amps, etc.) offends the self-proclaimed illegals to the degree that most of them will eventually get tired of the newsgroup and go away. That will open up rec.radio.cb for discussing the topic it was intended for: CB radio.

That's not what he claimed. He claimed that reflected power inside
the coax caused it to radiate.

Here is what Sparky wrote:
> Alright, now you have incident and reflected power travelling along the
>same transmission line. The phase velocities are the same, but the
>phase relationships are different, and their phasing interaction is
>what causes standing waves. They are called 'standing' waves because
>they don't move, and can actually be measured along the transmission

>A standing wave along a transmission line behaves just like an antenna,
>in that it has points of high voltage and points of high current which
>are 1/4w apart from each other.
>The point that has high voltage is also a point of high impedance, and
>the point of high current is a point of low impedance. When this
>happens, the transmission line does not behave as predicted because the
>line is designed for a fixed impedance. Power is therefore lost in the
>transmission line and is radiated away as both heat and RF.

But don't take my word for it. See exactly what he wrote here:
http://x55.deja.com/[ST_rn=ap]/getdoc.xp?AN=704860316&CONTEXT=978972788.1
13311798&hitnum=75

Also, note that he attributes this fiction to a reference book.
I checked the book. It says no such thing. Even though he referenced
the book, Sparky refuses to pinpoint one paragraph that even remotely
supports this claim.

Sparky is spewing nonsense and, despite his inability to support it, he
doesn't give up.

You mean electric and magnetic fields.

By the way, if you place a coax in an electromagnetic field,
there are currents on the outside. Does this mean the coax
is radiating?

If you want to get pissy about it, electrostatic and electromagnetic.

Merely placing coax in a mag field produces a piece of coax sitting in a
magfield. Absent some movement, nothing is happening. Move the field,
you move electrons and get a static field plus a counter-acting magfield.
Get the fields together in a 377 ohm relationship and some sort of
instantaneous radiation occurs. You have also successfully invented a
primitive generator.

The cost accountants will nix your use of coax, however.

Nahhh twistie, you wish you could get me pissed...you are just one of the "Dayton hawkees". Everytime I read this I crack up, so I decided to do a re run for people who were not here in November.

Special announcement about the 3 special kids!
Folks, you need the following book...Twistie, tnom and Scottiekins have, with adult supervision,
drooled into a dictaphone the following masterpiece of authorship and it is now available at your
local book store...Don't miss "Muskrat Love", the heartwarming story of 3 illegal CB'ers who find
love and marriage through uniting in hatred for N8WWM, the mean 'ole hammie they wish they
were 1% equal to in quality of flame issues.
While their Sparkomatic and 2 pill amp combo splashes all 40 channels and into 10 meters, listen
to the 3 sweet little CB'ers plot, plan and generally scheme to out flame the greatest flamer of all
time. Read about their use of electronic components as aids to their sagging libido's. Learn why
no female relatives ever come to visit. Look at the special 13 page photo insert that shows the
dried snot on their microphone! This and much, much more.

Folks, this book is on par with the smash hit "I am faithful to my wife", by Bill Clinton, and will become recognized as a major literary accomplishment. The trippin' trio have outdone themselves this time, and you have just gotta read it to believe it. Only 29.95 now at your local bookseller!

Hey Dougie, did you have a good day going on about us evil radio doers (chuckle)? I sure did. Another beautiful day in paradise. So much of your post is BS only a teeny tiny bit even deserves graced with my words.

Who is Aaron?(chuckle) There is no Aaron. You had ample oppurtunity to prove you are who you say you are, you didn't, you can't, you won't. That makes you a liar. If you weren't so obsessed with it, you could care less what we think, Dougie. You're a loser.

"Are you a real (ahem) guy?" HAhah! Self -explanatory again. Sorry you can't follow. You need at least an attention span longer than your gut reaches and an IQ at least in the low triple digits to understand. Hehehhe Don't that suck, Dougy?

"I don't use profanity" You deserved this one ya' big loser. You set yourself up here. You forget who you post under so many times, do the search as I suggested before, when you suddenly had a series of brain farts and was unable to comprehend what I was telling you. You really don't get it! I may begin to feel bad for ya' before this is all over, I mean, the pic is one thing, but your sheer unimagined ignorance in believing that ANYONE actually believes your lies does nothing but show your utter disrespect and underminding of the entire groups integrity. See Dougie, that makes you a loser. A special loser, because there are those of us that pity you, but a loser, no less.

I skipped all your whining, sniveling crying junk and went straight to your bleeding jugular that you conveniently left sliced wide open due to the gaping wounds of being caught in your own malicious lies, here, we pour salt on the wound.

"I don't respect people..." was all you needed to say. Again, Dougie, very carefully now, read it s-l-o-w, go back to deja and search how you first came into this ng. Like a bull in a China shop and No respect. You didn't even give this place a chance before turning your hate, discontent, inadequecies, and insecurities toward things thathad nothing to do with you..such as posting that you sent something to the FCC that was 100% legal. A) This makes you a liar, AGAIN! B) A troll, as well. C) A profound demonstration of your inability, ineptness of comprehension, and ignorance of the law. Hey Dougie, don't that suck?

"A new breed of outlaw cber came along recently". Watsamatter Dougie? Do you try to be this sorry, pathetic and ignorant? Nothing new, and certainly not recent, you pathetic lying loser.

"Idiots need to be told they are idiots". A least you understand why I'm urinating on all your lying posts Dougie, hahahahah!

"I don't accuse anyone". No? Liar! Many cases you have.

Oh, my favorite. "It's slander"! LMAO! Here you go Dougie, trying to pat your self on your fat ass, only I won't let you do it. THAHAHHA! The contingency is quite aware of the difference between slander and libel you LOSER! Not even a good try!

Of course no one can do anything about it. You found that out when you cried like a little girl after you made disparaging remarks about people and someone made a webpage you didn't like Dougie. You cried foul and was told there is nothing you can do ahhhahahahaah! You know first hand. This is the only truth I have EVER seen you post, loser! Don't that suck?

And your last statement is in direct contradiction with what you stated the other day concerning posts. You said it WILL NOT make a difference. Well, you got it half right Dougie, YOU won't make a differene because you are about as important as last years news to this group, which is why only a few even know you exist. You still don't get it! HAHAHHAHAHAH! You are a loser of the first degree, Dougie. Don't that suck?

phil for the size and price the 250 amp leece nevilles are the way to go.
adding 8 electrodynes might mean you need some freont end work soon they are
big bulky and heavy. Niehoff is the shit but they cost a small fortune.

No we are just talking about it see there is a big difference we are on a computer talking about it. No illegal operations going on here my computer is not peaked or clipped... heck i know 1/2 of the guys who read the NG don't actually even own a cb but they like to talk to the guys that do so they act like they have one. Its all a scam a BIG BS story dont you get it do you really think these guys could put 8-10 alternators on there trucks and run around with 1015,20 kw out of a car or truck. Get real You have been duped Voobner. Someone has fed you a line of shit and you believe it and have made it your lifes cause, because I see no illegal operation here at all just some plain old folks sitting back shootin the shit about whatever they want to.

Hey ass...oops I mean SS aka 454 aka bigboy aka mallshopper aka crumb dropper aka MAULDROPPER!!
Steve, see, there you go again....answering the wrong message....so your excuseis???? ah yes.... you dont have a piddly 4pil?? "Big Timer" I didnt expect such an original excuse from a BigGun like yourself.....let me guess.....BigBoy goes AC?? Whatever~~~~ Hope I don't hear your name in Dx, crumbdropper...Thats what I'll leave you droppin when your spittin and slobberin in your mike!

Well I guess no answer is like backing out.....save your response, I dont have time for excuses...Im in DX on a regular basis...You on the other hand will be trying to talk around town(if no truckers cut your lips off) Its been a pleasure puttin these keys on you two (667 & crumbdropper) since I have no takers on the Dx challenge Im gone! I thought you guys wouldn't let a chance like this go by....oh well!!

321 mobile western Maryland
Peace Im out

you are.

I'm sorry you can't make your point without resorting to derision or
personal attack. The fact that an entire group of anonymous illegal
CBers playing internet detective can't confirm my personal info isn't my
fault. The Voobner family name isn't common, but I assure you, we do
exist.

Sounds like the antiques in the old 20th Air Division, Air Defense
Command, SAGE Blockhouse at Ft Lee AFS, VA. I had to forecast
probability of lightning so we knew when to switch off the commercial
power and start up the diesels. Couldn't let the AC stop or we would
burn baby burn!

Bombs on Target!

Hey Tim I had to check out the current web page wars, that copyright notice, at the bottom of YOUR web page, is even more funny than the web pages posted about you, since one has to consider it is on a page published by somebody who has no respect for the law. And your record of illegal activities are by your own self disclosure. Seems you want to have your cake and eat it too. The best part about this is you did it to yourself!

S'cool, Train..you know I never sweat the small stuff. Matter of fact, I was discussing this today with someone. I recommend all the good guys (you know who you are) slap me in the kill file here, at least for awhile, unless you like the sight of me continually urinating on Dougies chubby leg! He already ran off a great guy and tech, or two, or 3, and for that he is damaged goods here as far as Im concerned, not to mention his lies and porn posts. Besides, the other group is where one may discuss freely. There are those who's opinions I respect on this ng, they know who they are because they are the regulars and the one's that have assisted me in the past through email and other mediums. If the majority tell me my posts are bothersome, for lack of using the killfile or whatever, I will cease my merry little hobby of leaving welts (it really does bring a smile to my face) all over Dougies tail. Fair enough?

You are typical of your kind and it doesn't surprise me that most of your posts are cross posted. If it is relevant to the group than it is not an issue. However posting policy,license and other ham related issue to the CB group will get you the attention you are looking for. SON.

>You were clearly stating that changing the coax length changes
>the match which, in turn, changes the amount of reflected power.
>And you are unequivocally incorrect.

Anything that changes the input impedance of the coax changes the
radio/coax match. If the length of the coax changes the input
impedance at the coax, as you have said it does, then the length of
the coax changes the radio/coax match. This is a really simple
deductive argument. Why is it so hard for you to comprehend? Answer:
you are a troll.

>By the way, you conveniently snipped my challenge to support your

Never been to a keydown competition, but got a couple of questions anyway. Are there different divisions for different levels of power/antennas/setups? What kind of equipment usually wins at these events? You'd think everyone would pretty much opt for the same type of setup, running phased 9' whips, power mikes and plenty of wattage, only to get the same results.

Perhaps, but I was talking continuous RMS output, not peak. The 4CX-1000A has a 10,000 watt plate dissipation rating - which means at 50% efficiency, 20,000 watts in (DC) results in 10,000 watts out with 10,000 watts dissipated as heat. Class B amps are around 60 - 65% efficient. Which means 13,000 watts out with 20,000 watts in and a dissipation of 7,000 watts - whoops, we can run more power. In reality, combining the outputs of a LOT of devices can become tricky. Of course, I hear that some broadcast stations are switching to switchmode amplifiers (class D and beyond) where efficiencies can exceed 90%! Of course, this is very tricky and involves a lot of circuitry and $$$$$! My point is that it is probably cheaper to go with vacuum tubes once you are well above the 1KW level. Granted, they are not suited for mobile use, but to generate that kind of power in a mobil calls for lots of heavy duty alternators, lots of batteries, and a complete disregard for what that RF is doing to your body (you cook with microwaves, remember)! The human body is approaching self-resonance at 27 MHz and anyone running more than 100 watts should be running it from an antenna mounted on top of a tall tower to keep the highest e-fields away from human beings.

You should ask the following:

Did you consider what effects large amounts of RF power will do to you?

The FCC guide lines for RF exposure has the LOWEST limits, read RF power level or field strength if you like, between 30 MHz and 300 MHz. The 11m CB band is 27 MHz, right up close to the lower limit I mentioned above. At the level of power these guys claim to run, if it was a commercial broadcast station, nobody would get near the antenna, while the transmitter was turned on! From pictures, at these keydowns, you have uninformed people standing mere 10's of feet from the antennas. There was even a write up in POP COM, about a year or more ago, where the writer commented that his handheld VCR kept ejecting the tape when the transmitters were turned on. In addition you could see some stills from the video were fuzzy due to RF power getting in to the electronics. While the jury may not have a definite ruling, right now, on the long term effects of exposure to high RF fields, do you want to run the risk of your future health being ruined, if there is finally proof that you can be harmed? I'm not going to comment about the legal aspect of this kind of event because the health issue is much more important in this case I feel.

More information is needed - such as whether the field is static or changing. If changing, is it a high enough frequency that radiation is possible? Does the coax extend outside the electromagnetic field? Are well allowed to put suppressor cores on the coax to minimize or eliminate the currents?

There may be other concerns that I am forgetting, this late at night. The short answer is "It depends."

If I was you, I wouldn't bet my license on it.

I see code as a basic operating skill.... and since one of the 'so-called' REASONS for the existence of Amateur Radio is to provide a pool of trained radio operators (it did for 2 World Wars as well as for two 'Police Actions') ....and since code is still a requirement for military & commercial radio ops ....and since the top commercial licenses used to be the 'dreamed of' culmination of an Extra Class licensee... I see a reason for a code requirement as a logical conclusion of that 'raison de etre'.

But then again, many 'Johnny-come-latelys' to ham radio aspire to nothing more than glorified CB without the QRM. I'd be willin' to bet that a FAR GREATER PERCENTAGE of them would fail the retest you suggest.

I will ask you, and anyone else for that matter, to try the following experiment: Lay out a coax at least 1 wavelength long (length chosen for effect only) to a dummy load that will produce standing waves (i.e, not 50 ohms). Key up, then run your FSM along the length of the coax. You will see hot spots every half wave from the load, just as I have seen and done in tempest training demonstrations that I held once a month for almost two years while in the USMC (high-power UHF in the van is not a good thing).

Aaron, I have no intention of using the 1011 on 11 meters... I am also a ham and I do enjoy 10 meter coms every once in a while and the 1011 would be fun to play around with. You, my friend, should not make accusations unless you are sure you know what you are talking about. Seeing that you also came from the 11 meter ranks you should have some respect for the people that operate there as they are in the hobby for the enjoyment of radio communications and shouldn't have to be lamb basted by you every time they suggest something that is in conflict with your obvious bias attitude. Most of the 11 meter op's I know operate as well or better than a lot of the ham's I know and that is life! This is not a perfect world!

I was not attempting to be a "smart-ass", as much as I was attempting to address a simple matter of someone picking nits, over a comment that was made as an observation.
While it is true that USENET is an international forum, the plain truth of the matter is that the U.S., by far, dominates the discussions on this newsgroup, hence the comment about "FCC rules". But if you apply the name of whatever rule making body that regulates radio communication, in your respective country, then the comment is still valid.

> >I'm sure THEIR rules are being just as arbitrarily broken as well.
>
> I wouldn't be so sure if I were you. The Radio Communications Agency
> appear to be an awful lot more proactive than the FCC when it comes to
> enforcement.

So, your assertion then, is that there are countries out there that actually ALLOW the use of 1KW+ power outputs, and the unrestrictive use of frequencies not allocated to their equivilent of the CB band? Somehow, I really doubt it.

> By the way, I have yet to see any message id's to support your
> original claim. Care to post the ids of the multitude of messages
> supporting your argument?

What the hell are you talking about? My "original claim" was that I found it ironic that there were people on here that were touting USENET "rules" , and how we should abide by them, while these same people, for the most part, routinely ignore FCC (Or whatever communication's agency regulates your version of CB) rules. I don't need any "message ID's" (whatever THAT means) to "support" what is nothing more than an observation on my part. If you doubt that there are "rule breakers" out there, just read the majority of message threads, and the subject matter

contained within them.

>with vacuum tubes once you are well above the 1KW level.
A couple of reasons that broadcast tx manufacturers now run class-D pa's is that you can have one or several pa modules go down and the tx still stays on the air. You can pull the dud modules out without flicking the big switch.

Also it's down to the utility bill.

You compare an old RCA or similar 50kw rig with Harris' latest line of DX series transmitters with digital pdm mod and you can knock several zero's of the electricity bill each month.

Aint no comparison.

Phil / London

When I bought my Imax-2000, I got it for 59.99 from Copper. The best price I could find for the ABS-1600 was 99.99. Of course, this was around a year ago, so the prices may be have changed.

I too am trying to convince the wife that I must have a JayMade!

5541. Joke for the day #1

Newsgroup: rec.radio.cb
Date: 2001-01-31 15:27:20 UTC
From: oneqck76ta@aol.com.com.com
Message-ID: <20010131102720.11951.00000013@ng-fk1.aol.com>
Source record: 71440

A few minutes before the church services started, the townspeople were sitting in their pews and talking. Suddenly, Satan appeared at the front of the church. Everyone started screaming and running for the front entrance, trampling each other in a frantic effort to get away from evil incarnate. Soon everyone had exited the church except for one elderly gentleman who sat calmly in his pew without moving, seeming oblivious to the fact that God' sï¿½ ultimate enemy was in his presence. So Satan walked up to the old man and said, "Don't you know who I am?" The man replied, "Yep, sure do." "Aren't you afraid of me?" Satan asked. "Nope, sure ain't." said the man. "Don't you realize I can kill you with a word?" asked Satan. "Don't doubt it for a minute," returned the old man, in an even tone. "Did you know that I could cause you profound, horrifying, physical AGONY for all eternity?" persisted Satan. "Yep," was the calm reply. "And you're still not afraid?" asked Satan. "Nope." More than a little perturbed, Satan asked, "Well, why aren't you afraid of me?" The man calmly replied, "Been married to your sister for over 48 years."

Today's joke: Dr. Seuss' lost tongue twisters.

See if you can do this.
Read each line aloud

This is this cat
This is is cat
This is how cat
This is to cat
This is keep cat
This is a cat
This is dumbass cat
This is busy cat
This is for cat
This is forty cat
This is seconds cat

Now go back and read the THIRD word in each line from the top.

5548. ChipSwitch & Uniden HR2510 ONLINE MANUALS! *>FREE<* PDF

Newsgroup: rec.radio.cb
Date: 2001-01-31 16:33:19 UTC
From: Karl Vesterling <kjv@adelphia.net>
Message-ID: <j7Xd6.525$cm3.80119@news1.news.adelphia.net>
Source record: 71550
Cross-posted to: rec.radio.amateur.dx,rec.radio.amateur.misc,rec.radio.cb

For those of you who have purchased an HR2510 or Chipswitch and need a manual to it... Here's where to get downloadable versions of them *>FREE<* !

You will need the Adobe Acrobat viewer.

ChipSwitch Manual
http://kjv.homeip.net/~hr2510/html/chipswitch_information.phtml

The link to the manual is at the top of the page, just to the right of the Adobe Acrobat logo. You'll note a lot of care has been taken in putting together this ChipSwitch manual. It closely resembles the original manual for the HR2510. If you have sold a radio with a chipswitch, you may want to print out a copy for the person who purchased it instead of searching for the original manual. This one is by far easier to read and understand.

HR2510 Manual
http://kjv.homeip.net/~hr2510/html/radio_service.phtml?manufacturer=Uniden&model=HR2510

Click on the link above, then scroll down and you'll see the online version of the manual.This one is a bit larger than the Chipswitch manual as it's a series of bitmaps instead of text typed in. In the future I may decide to make a combination owners manual for the HR2510 and the Chipswitch and combine them into a single document. But for now they'll be two separate documents. Be prepared to wait a long time for this download if you are on Dialup.

**NOTE: The original HR2510 manual had the schematic in tri-fold fashion on the back of the front cover page. Because it didn't scan well, and most printers can't print out the detail (IE, anything inkjet) I decided to leave it out. Plus the fact that you'd need paper larger than 8 1/2" X 11" (Letter Size). So if you're looking for the schematic don't bother to download this manual, it's not included in it. Thought I'd mention it before anyone got disappointed.

We are looking for other manuals!!!!!

If you have an owners manual to a popular older model radio (Cobra 2000, or some such other radio) and it's in nice condition please contact lbridge1@juno.com (Doc's Wife) for information. What we would like to do is start to add on-line manuals to radios on Doc's site. We'll gladly pay for the shipping to and from yourself, and will have the manual back to you in a very short time.

Please, no manuals for newer models that are still in print. We're not out to step on the manufacturers toes here, we're just out to help the CB and Amateur community gain easy

access to otherwise scarcely available documents.

5549. Re: looking for these crystals - RAYTHEON

Newsgroup: rec.radio.cb

>
>Hi All
>i am currently using a vintage RAY-TEL TW-2 made by raytheon. it was made
>somewhere around the early 60's. i am looking for crystals (both transmit &
>receive) for channels 1 & 19. if there is anyone in this group who could
>help, it would be appreciated.

Robert,

I can't help you with the crystals (I'm looking for crystals for my own Raytheon sets!), but you might enjoy a visit to my Raytheon CB radio web site for some historical information, photographs, vintage advertisements, and so on. The URL is at the end of this message.

BTW, the TWR-2 uses a 6 MHz first i-f with high-side injection in the first mixer, so the crystals you need will be 6 MHz above the actual CB channel frequency (ie, channel 1, which is 26.965 MHz, requires a crystal of 32.965 MHz, and so forth). Other Raytheon sets used a different offset for the receiver crystals depending on the receiver i-f scheme. The single-conversion sets all had a 455 KHz i-f, so the crystal frequency was either above or below the operating frequency by a factor of 0.455 MHz. Some dual-conversion Raytheons used 6 MHz (like the TWR-2) and others used 1.65 MHz. What I'm getting at is that not all Raytheon receive crystals will work in all Raytheon sets. I'm not aware of any other brands that used a 6 MHz offset, so you're not going to be able to use anything other than Raytheon crystals in your receiver.

The transmit crystals are the same in all Raytheon sets, and they are the same as those used in many other 1960s rigs. The crystal frequency is 1/2 the operating frequency (doubled in the oscillator). Instead of 26.965 MHz for channel 1, the crystal will be 13.4825 MHz. Transmitter crystals will be much more readily available, but that's no help if you don't have the receiver crystal.

As a last resort, you can have crystals made by companies like JAN and International Crystal, but they'll be costly.

If you get anyone offering you radios, crystals, or parts that you are not interested in, please forward their information to me.

73,
Dean, K5DH
Visit my Raytheon CB radio web site:

I have had a friend that had both, he claimed that they both heard about the same but he got more bleed over on the ABS1600 and brought a IMAX 2000 and he is still running it. The ABS160 seemed to have the lowest SWR around CH1 and below that channel.

> for a code requirement as a logical conclusion of that 'raison de etre'.

I don't have any problem with that point of view. What is illogical is the
pass/fail nature of the Morse Code test to get access to frequencies below
30 MHz. For example you can fail every question on the written exam, lets
say for Part 97 rules, and still pass the over all exam. Now if you fail the
Morse Code test you're screwed. Makes no sense that one communication mode
has to be singled out for such extra special treatment in the exam process.

> I'd be willin' to bet that a FAR
> GREATER PERCENTAGE of them would fail the retest you suggest.

It would be fun to try it and see!

VERY TRUE.

I would not call the written exams "hazing rituals". The point of the exams
was to gage the applicant's knowledge of the material before granting them
the privilege of operating, and modifying radio equipment. Now, with the
open question pools, the ability to do even that is lost. Anybody willing to
spend some time with a higliter, marking the correct answers in the study
guide to memorize, can now pass the written exams, what a joke.

> you are a troll.

Let me give you an example (since you can't give us any):
If you change the coax input impedance (by varying the coax length)
from 100 ohms to 25 ohms, what is the difference in the reflected
power? Answer: Zero.
The impedance has changed but the match is no better.

You were clearly stating that changing the coax length changes
the match which, in turn, changes the amount of reflected power.
And you are unequivocally incorrect.

From what I've read in that dumbass "Morse replacement code" forum, you've got a fairly decent sense of humor. Now, what I can't understand is, how does one person with a fairly good sense of humor get to be so vitriolic and downright offensive dealing with somebody who made an honest mistake copying a call? It's not like he killed your grandmother or anything - he simply miscopied a call. Is that reason enough to berate him publicly? What gives? When you started dxing, were you a top-of-the-line dxer right away?

Don't sweat it phoneman! Many are doing it because they can't stand to see the site of Dougies blood, others are doing it 'till he's done posting (may take some time, but he WILL go away, no matter how hard and loud he jumps up and down stamping his hoof, crying, swearing, and sniveling that he isn't going anywhere) and still others are doing it because of the wasted bandwidth (whatever that means, but OK, I ask justification from no one, EXCEPT Dougie's lies..hehehe). In any event, don't take it personal. Happens all the time. If you never had a problem with someone, they shouldn't have a problem with you, and you'll be back in their receive soon enough. If not, then it's THEIR problem, and in that case, do you REALLY care?. Happens all the time. Later, man!

No. Sorry. If you operate illegally I have no respect for you.

And if you really were intending to use the 1011 on the ham bands, you'd
be in a ham newsgroup discussing it, not in a CB newsgroup (where the
rig "coincidentally" has a big following among bootleggers).

> If you want to get pissy about it, electrostatic and electromagnetic.

Hey, no animosity here, my friend. I just strive for accuracy.
You're the one who brought up Maxwell's equation.
And now you've got it even more wrong.
Electromagnetic is not the same as magnetic. An electromagnetic
wave is a propagating wave that consists of both electric and
magnetic fields.

An electrostatic field is a static electric field.
RF current does not create an electrostatic field.

> Merely placing coax in a mag field produces a piece of coax sitting in a

> you move electrons and get a static field plus a counter-acting magfield.
> Get the fields together in a 377 ohm relationship and some sort of
> instantaneous radiation occurs. You have also successfully invented a
> primitive generator.

I said it was an electromagnetic field which, by definition, must be
changing at some frequency or it would not exist (see Maxwell's

equations especially as they pertain to the Wave Equation).

> The cost accountants will nix your use of coax, however.

Perhaps. Since, in this case, we're not concerned about currents inside the coax, let's switch it to an aluminum rod. Consider an aluminum rod placed in an electromagnetic field. Current will be induced on the rod. So, is the rod radiating?

Yes, basically it is like a car stereo shootout. Buy, install, then
crank it up. These poor misguided souls buy as much wattage as they can
afford and install it in their vehicles. They meet in some secluded
place (somehow they think their 10KW rigs won't effect consumer devices
or other CBers if they are a mile or two out of town) and proceed to
destroy the spectrum for an afternoon. The sad part is that they have
convinced friends and families that this is a legit hobby.

Leland , Let me ask you a question, do you smoke? Smoking is hazzardous to your health, but people still do it! Do you eat Eggs??? Eggs contain high amounts of cholesterol that over time can clog your arteries,and create health problems like arterial schlorosis. But people still eat eggs. Ever drink? Ever heard of cirosis??? comes from consuming large amounts of alcohol and over time can destroy your liver. People know that consuming large quantities of alcohol daily is the cause of cirosis but continue to drink!!. Do you think that breathing in Smog is not potentialy damaging to your health? My point is, that most people that go to keydowns, (have you ever been to one ???) know that there is a potential risk to their health, but choose to take that risk.Most of the "players" in the keydown scene have a great knowledge of rf, and rf theory. Just like Boxers, football players,racecar drivers risk harm to themselves. It's done for the love of the sport they are into !! The concerns of ones health that attends a keydown, should be just that, their own concern!! Good Day !!!

OK, I'll post a paragraph. I'll use the page you referenced:
Sparky wrote:
> Starting at page 513 of Robert Kellejian's "Applied Electronic Communication",
> ISBN 0-574-21535-2, summarized. My own comments are in parentheses.

It is section 11: Transmission Lines and Networks

(starting almost halfway down at the first full section)

------- start of quote --

In engineering practice the line voltage, current, and power from the
generate are called incident, as they are incident to the load. The
line voltage, current and power flowing back to the generator are called
reflected, as they are reflected from the load. The incident voltage...

------- end of quote --

You see, I am looking at it. And guess what? I can't find what you
wrote -- not on this page or any other page. Hmmmm. What happened,
Sparky? Did you make it up?

You kept badgering me to get this reference which you claim supports
your statements. Now, I have it and you don't want to talk about it.

By the way, I think this is the second time you put me in your troll
filter.

> The short answer is "It depends."

Don't knock yourself out trying to answer this question.
It is a classic chicken and egg problem. There are RF currents
on the coax in the presence of an electromagnetic field and
there is an electromagnetic field in the presence of RF currents
on the outside of the coax. If you have one, you have both.
This is what Maxwell's equations say. However, they do not establish
a causal relationship. Which came first? (the chicken or the egg?)
That is my point and nothing more.

It is the same case with a passive element on a beam antenna.
Currents are induced on the passive element. Does it radiate?
Well, you could argue either way. The net power out of the
element is zero so you could say it does not radiate. On the
other hand, it does re-radiate induced power so you could say
that it does radiate. Then again, there would be no induced
power if it were not in the electromagnetic field.

So, go back and consider a transmission line coax with common
mode currents on the outside. Is it radiating because those
common mode currents exist? ...or do those currents exist because
it is in the presence of radiation?

Had an interesting discourse with D. Hendrickson a while back about "banned" radios. The primary focus of the FCC at this time, as related by Mr. H., is to stop the flow of exports at the importer and distributor level, which will maximize the results of an already limited pool of resources for this enforcement. They need to be able to get a lot of "bang for the buck". While I am sure that "problem" operators with big dirty stations causing a lot of interference, or playing on the ham bands, will get whacked, the guy trying to peddle his used radio or amp, while technically not following the letter of the law, isn't the root of the problem as perceived by the powers that be. In short, all of your forwards to the FCC are really wasting their time, while serving only to give yourself positive strokes. The stated purpose of the "info" site is to identify large retail sources making illegal equipment widely available on the Web. Your self importance not withstanding, aim your efforts there instead of assuming that you are doing some viable holy work by messing with hobbyists that pose little or no real threat to life as we know it. Let the Commission do what it considers to be it's job without being beseiged by your daily forwards. (Wonder if they have a killfile?) The newsgroup will be better off without you.

Thanks Bill,

You seem concerned with keeping export radios and CB amps in
the hands of "hobbyists". Are you a dealer or distributor?

Right on, Phoneman. May even take a ride out to the beach to see if I can't hear that keystone station tonight. Haven't even turned 555 on to even listen in a such a long time now. Wonder if Bob is still around? You know who else I haven't heard since the beginning of summer LAST year? 101 port-a-potty-Charlie on lower 38. He used to be in my receive daily for hours at a time, now he seems to have vanished. Wonder if that 'ol boy blew a gasket or something? Maybe his 2 kw'er blew some tubes and he can't get new ones. Any way, I'll be listening.

5596. Magnum DeltForce Mod gone bad question.

Newsgroup: rec.radio.cb
Date: 2001-01-31 21:40:20 UTC
From: oneqck76ta@aol.com.com.com
Message-ID: <20010131164020.05961.00000045@ng-fz1.aol.com>
Source record: 71848

That delta force I was working on earlier with the resistor problem, Well I got the resistor in place but now when I turn on the radio all the diplay says is "PA" and none of the functions seem to do anything. I can hear sound when recieving and when I key the mic it seams to be transmitting (I am using a dummyload). On what freq. I don't know because it only shows "PA" on the diplay. When I got the radio it would show 7.105 on the display and when you did the "shift" and then "call" thing it read all the freqs (Like it was converted) but "PA" would come up when transmitting. Any ideas on what is causing this? I did get the resistor replaced and tried several times to reset the PCU with nothing. Any help would be great. Thanks in advance. This radio doen't even have a PA jack in back. Just Ext. speaker and CW jack. Untill Next time.............

>
>-Aaron-

Neither. I fail to see where you draw that conclusion from, as well. Nothing in my post elicited any concern that I have about radios, which only serves to confirm your near-paranoiac feelings about anyone who contradicts you. I will, however, state that I have been a radio "hobbyist" since 67, when my father and I took up an interest in it, and have been in and out of the hobby since, at varying levels of participation. I do not think that the overall majority of those who operate in the "freeband", or use export type rigs on 1-40, pose any significant threat so as to require the expenditure of LOTS of taxpayer money in an already overburdened agency's budget in order to catch them talking to another like minded person. Those creating big RFI issues are dealt with, and being purely objective, the approach the Commission is using at the borders and with the big dealers, is the most effective way to use their resources. If they're spending my damned money, spend it wisely, even if I don't totally agree with the mission.

You missed the whole point, which is that your (and others- you're not alone in this misguided effort) seemingly incessant forwards to a site set up by the FCC for one purpose which was pretty clearly defined at it's inception is really not what the intent is. My guess is that they get a lot of messages that really don't fit the criteria of "distribution" in the sense that they intend. What your posts do is waste their time; the fact that you feel it neccessary to post the fact that you claim to have forwarded the item performs only two functions: self-aggrandisement and to, for lack of a better word, show off on the group. I can remember such behavior as a youth, when certain overzealous members of the school Safety Patrol wore their orange belts everywhere, including before and after school hours, and tried to enforce "rules" on the rest of the kids. They got tossed off the squad. Later in life, one little Italian kid did his level best to become a cop. He went to a local Community College to take PoliSci, and got a part time job with the Campus Security, all the while besieging the local PD's and Sheriff's department with countless applications. After numerous attempts, and a lot of rejections from the interviewing officers and Psych. profilers, he moved out to Bellingham, Washington after a brief stop in California to visit a cousin. The rest, as they say, is history. While I don't know you, after reading your constant posts, the only image I keep getting is that of Kenny in his orange belt screaming red-faced at some laughing teenager to "walk, don't run" with little tears of rage in his 9 year old eyes. If we only knew!!!!

In closing, my only reason to respond to your post is to pretty much try to let a little wind out of your self-inflated sails. Don't be such a "safety patrol" kind of guy, and annoy those whom you think you are "working with" as much as those whom you hope to annoy. Vigilantism often backfires. You really are little more than a gadfly, and not the secret agent you have convinced yourself that you are. Sit down and take stock of what really matters, other than some crusade that in the grand scheme of things means as little as you do. Then go away.

Does it matter? The seller is NOT responsible for how it is to be used. He has no control over that. He only has to assume that it is to be used for the same purposes that he uses it for. And that is a perfectly legitimate and legal use. It is used in metallurgy, the same way that many in this group use their amps to seek out flaws in the molecular structure of steel.. Without this type of inspection process flaws can get by the naked eye and cause unwanted failure. Isn't this how you use yours?

Well everyone, It's been real fun but it is time to move on from this nonsense. Most of you will still hear from me be it the radio on thoes ILLEGAL freq. and/or other forms of newsgroups/Mailing. No I am not running off cause I will check in once in a great while but there just isn't mutch on here about CB Radios anymore (Aaron and whom ever else, Amps is a form of CB to me and I will continue to use them just to make you mad). One more thing Aaron, How about sending your address this way so I can stop bye in the old desial truck and show ya how my so called SplatterBox CB really works! Oh yeah, Don't forget to call the FCC too cause illegal stuff in a semi is a no no last time i checked. And to everyon out there that I had the pleasures with on the old radio on freq 26.915 today, You were all sounding great. Keep it up! When CB radio becomes the subject in here again I just might just come back, Untill then, BYE BYE BYE BYE BYE!! Untill next time.....

p.s. sorry for wasting everyones time if I did.

And you seem concerned with the following, Dougie:

Porn, lies, fake characters, obscenities, jealousy, more lies, and trolling. I may have missed a few, but the following says it all.

Here is some advice:

1) Lay low for awhile.
2) Once in awhile, listen to others.
3) See what others have to say.
4) End your hate and discontent.
5) Repent your pathetic ways.

Don't that suck?

He was underappreciated as Marconi took a lot of the credit for Tesla's engineering feats. Too bad. Tesla's lab was located here on the north shore of Long Island in a place called Wardenclyffe (sp?) now called Shoreham. All that remains of his work is a cement pad where his antenna stood. The surrounding buildings are, if I'm not mistaken, up for sale as the current owners Agfa Gervaert (again sp?) are leaving the area.
What makes the Marconi vs Tesla fued more ironic if the fact that the locals in Rocky Point actually moved a small radio shack used by Marconi to an elementary school ground not more than three miles away from Tela's lab, named a local road after Marconi and made scant mention of Tesla.
For radio enthusiasts this area is rich in 'wireless' history as the former RCA also had a large antenna array here which has since been turned over to NY State and made the largest wilderness area on the Island.
Makes one wonder how easy it is to point the ol' Jogunn east and talk to Europe whereas those boys spent years figuring out the engineering quirks. 73, Jim

This site has a wide selection to choose from. I hope you have a fast
connection like a cable modem or a DSL line. I like checking out the
international stations, like the ones from Brazil for example.

http://www.internetradiolist.com/

Have fun.

Do you think they are interested? I thought they'd be more
likely to bid on a Henry, or an Alpha, but a Texas Star?
